

Table of Contents Comparison
Mechanics of Materials by Gere/Goodno, 7th vs 8th Editions

Mechanics of Materials, 7th Edition James Gere & Barry Goodno ©2009	Mechanics of Materials, 8th Edition James Gere & Barry Goodno ©2013
1. Tension, Compression, and Shear	1. Tension, Compression, and Shear
1.1 Introduction to Mechanics of Materials	1.1 Introduction to Mechanics of Material
1.2 Normal Stress and Strain	1.2 Statics Review
1.3 Mechanical Properties of Materials	1.3 Normal Stress and Strain New Examples
1.4 Elasticity, Plasticity, and Creep	1.4 Mechanical Properties of Materials
1.5 Linear Elasticity, Hooke's Law, and Poisson's Ratio	1.5 Elasticity, Plasticity, and Creep New Examples
1.6 Shear Stress and Strain.	1.6 Linear Elasticity, Hooke's Law, and Poisson's Ratio New Examples
1.7 Allowable Stresses and Allowable Loads	1.7 Shear Stress and Strain New Examples
1.8 Design for Axial Loads and Direct Shear	1.8 Allowable Stresses and Allowable Loads New Examples
	1.9 Design for Axial Loads and Direct Shear
2. Axially Loaded Members	2. Axially Loaded Members
2.1 Introduction	2.1 Introduction
2.2 Changes in Lengths of Axially Loaded Members	2.2 Changes in Lengths of Axially Loaded Members Expanded Examples
2.3 Changes in Lengths Under Nonuniform Conditions	2.3 Changes in Lengths Under Nonuniform Conditions Expanded Examples
2.4 Statically Indeterminate Structures	2.4 Statically Indeterminate Structures New Examples
2.5 Thermal Effects, Misfits, and Prestrains	2.5 Thermal Effects, Misfits, and Prestrains Expanded Examples
2.6 Stresses on Inclined Sections	2.6 Stresses on Inclined Sections
2.7 Strain Energy	2.7 Strain Energy
2.8 Impact Loading	2.8 Impact Loading
2.9 Repeated Loading and Fatigue	2.9 Repeated Loading and Fatigue
2.10 Stress Concentrations	2.10 Stress Concentrations New illustrations for stress distribution in a flat bar with shoulder fillets New Example of stress concentrations
2.11 Nonlinear Behavior	2.11 Nonlinear Behavior
2.12 Elastoplastic Analysis	2.12 Elastoplastic Analysis
3. Torsion	3. Torsion
3.1 Introduction	3.1 Introduction
3.2 Torsional Deformations of a Circular Bar	3.2 Torsional Deformations of a Circular Bar
3.3 Circular Bars of Linearly Elastic Materials	3.3 Circular Bars of Linearly Elastic Materials
3.4 Nonuniform Torsion	3.4 Nonuniform Torsion New Examples
3.5 Stresses and Strains in Pure Shear	3.5 Stresses and Strains in Pure Shear Expanded Examples
3.6 Relationship Between Moduli of Elasticity E and G	3.6 Relationship Between Moduli of Elasticity E and G
3.7 Transmission of Power by Circular Shafts	3.7 Transmission of Power by Circular Shafts
3.8 Statically Indeterminate Torsional Members	3.8 Statically Indeterminate Torsional Members
3.9 Strain Energy in Torsion and Pure Shear	3.9 Strain Energy in Torsion and Pure Shear
3.10 Thin-Walled Tubes	3.10 Torsion of Noncircular Prismatic Shafts
3.11 Stress Concentrations in Torsion	3.11 Thin-Walled Tubes
	3.12 Stress Concentration in Torsion New Example
4. Shear Forces and Bending Moments	4. Shear Forces and Bending Moments
4.1 Introduction	4.1 Introduction
4.2 Types of Beams, Loads, and Reactions	4.2 Types of Beams, Loads, and Reactions
4.3 Shear Forces and Bending Moments	4.3 Shear Forces and Bending Moments Updated Examples
4.4 Relationships Between Loads, Shear Forces, and Bending Moments	4.4 Relationship Between Loads, Shear Forces and Bending Moments
4.5 Shear-Force and Bending-Moment Diagrams	4.5 Shear-Force and Bending-Moment Diagrams

Table of Contents Comparison
Mechanics of Materials by Gere/Goodno, 7th vs 8th Editions

Mechanics of Materials, 7th Edition James Gere & Barry Goodno ©2009	Mechanics of Materials, 8th Edition James Gere & Barry Goodno ©2013
5. Stresses in Beams (Basic Topics)	5. Stresses in Beams (Basic Topics)
5.1 Introduction 5.2 Pure Bending and Nonuniform Bending 5.3 Curvature of a Beam 5.4 Longitudinal Strains in Beams 5.5 Normal Stresses in Beams (Linearly Elastic Materials) 5.6 Design of Beams for Bending Stresses 5.7 Nonprismatic Beams 5.8 Shear Stresses in Beams of Rectangular Cross Section 5.9 Shear Stresses in Beams of Circular Cross Section 5.10 Shear Stresses in the Webs of Beams with Flanges 5.11 Built-Up Beams and Shear Flow 5.12 Beams with Axial Loads 5.13 Stress Concentrations in Bending	5.1 Introduction 5.2 Pure Bending and Nonuniform Bending 5.3 Curvature of Beam 5.4 Longitudinal Strains in Beams 5.5 Normal Stress in Beams (Linearly Elastic Materials) Expanded Example 5.6 Design of Beams for Bending Stresses 5.7 Nonprismatic Beams 5.8 Shear Stresses in Beams of Rectangular Cross Section 5.9 Shear Stresses in Beams of Circular Cross Section 5.10 Shear Stresses in the Webs of Beams with Flanges 5.11 Built-Up Beams and Shear Flow 5.12 Beams with Axial Loads Updated Examples 5.13 Stress Concentrations in Bending New Example
6. Stresses in Beams (Advanced Topics)	6. Stresses in Beams (Advanced Topics)
6.1 Introduction 6.2 Composite Beams 6.3 Transformed-Section Method 6.4 Doubly Symmetric Beams with Inclined Loads 6.5 Bending of Unsymmetric Beams 6.6 The Shear-Center Concept 6.7 Shear Stresses in Beams of Thin-Walled Open Cross Sections 6.8 Shear Stresses in Wide-Flange Beams 6.9 Shear Centers of Thin-Walled Open Sections 6.10 Elastoplastic Bending	6.1 Introduction 6.2 Composite Beams 6.3 Transformed-Section Method 6.4 Doubly Symmetric Beams with Inclined Loads 6.5 Bending of Unsymmetric Beams 6.6 The Shear-Center Concept 6.7 Shear Stresses in Beams of Thin-Walled Open Cross Sections 6.8 Shear Stresses in Wide-Flange Beams 6.9 Shear Centers of Thin-Walled Open Sections 6.10 Elastoplastic Bending
7. Analysis of Stress and Strain	7. Analysis of Stress and Strain
7.1 Introduction 7.2 Plane Stress 7.3 Principal Stresses and Maximum Shear Stresses 7.4 Mohr's Circle for Plane Stress 7.5 Hooke's Law for Plane Stress 7.6 Triaxial Stress 7.7 Plane Strain	7.1 Introduction 7.2 Plane Stress 7.3 Principal Stresses and Maximum Shear Stresses Updated Example 7.4 Mohr's Circle for Plane Stress 7.5 Hooke's Law for Plane Stress New Example 7.6 Triaxial Stress 7.7 Plane Strain
8. Applications of Plane Stress (Pressure Vessels, Beams, and Combined Loadings)	8. Applications of Plane Stress (Pressure Vessels, Beams, and Combined Loadings)
8.1 Introduction 8.2 Spherical Pressure Vessels 8.3 Cylindrical Pressure Vessels 8.4 Maximum Stresses in Beams 8.5 Combined Loadings	8.1 Introduction 8.2 Spherical Pressure Vessels New Example 8.3 Cylindrical Pressure Vessels 8.4 Maximum Stresses in Beams 8.5 Combined Loadings New and Updated Examples
9. Deflection of Beams	9. Deflection of Beams
9.1 Introduction 9.2 Differential Equations of the Deflection Curve 9.3 Deflections by Integration of the Bending-Moment Equation 9.4 Deflections by Integration of the Shear-Force and Load Equations 9.5 Method of Superposition 9.6 Moment-Area Method 9.7 Nonprismatic Beams 9.8 Strain Energy of Bending 9.9 Castigliano's Theorem 9.10 Deflections Produced by Impact 9.11 Temperature Effects	9.1 Introduction 9.2 Differential Equations of the Deflection Curve 9.3 Deflections by Integration of the Bending-Moment Equation 9.4 Deflections by Integration of the Shear-Force and Load Equations 9.5 Method of Superposition 9.6 Moment-Area Method 9.7 Nonprismatic Beams 9.8 Strain Energy of Bending 9.9 Castigliano's Theorem 9.10 Deflections Produced by Impact 9.11 Temperature Effects New Example

Table of Contents Comparison
Mechanics of Materials by Gere/Goodno, 7th vs 8th Editions

Mechanics of Materials, 7th Edition James Gere & Barry Goodno ©2009	Mechanics of Materials, 8th Edition James Gere & Barry Goodno ©2013
10. Statically Indeterminate Beams	10. Statically Indeterminate Beams
10.1 Introduction	10.1 Introduction
10.2 Types of Statically Indeterminate Beams	10.2 Types of Statically Indeterminate Beams
10.3 Analysis by the Differential Equations of the Deflection Curve	10.3 Analysis by the Differential Equations of the Deflection Curve
10.4 Method of Superposition	10.4 Method of Superposition
10.5 Temperature Effects	10.5 Temperature Effects
	New Example
10.6 Longitudinal Displacements at the Ends of a Beam	10.6 Longitudinal Displacements at the End of a Beam
11. Columns	11. Columns
11.1 Introduction	11.1 Introduction
11.2 Buckling and Stability	11.2 Buckling and Stability
	New Example
11.3 Columns with Pinned Ends	11.3 Columns with Pinned Ends
	Updated Example
11.4 Columns with Other Support Conditions	11.4 Columns with Other Support Conditions
	Updated Example
11.5 Columns with Eccentric Axial Loads	11.5 Columns with Eccentric Axial Loads
	Updated Example
11.6 The Secant Formula for Columns	11.6 The Secant Formula for Columns
11.7 Elastic and Inelastic Column Behavior	11.7 Elastic and Inelastic Column Behavior
11.8 Inelastic Buckling	11.8 Inelastic Buckling
11.9 Design Formulas for Columns	11.9 Design Formulas for Columns
	New Section
	New Examples
12. Review of Centroids and Moments of Inertia	12. Review of Centroids and Moments of Inertia
12.1 Introduction	12.1 Introduction
12.2 Centroids of Plane Areas	12.2 Centroids of Plane Areas
12.3 Centroids of Composite Areas	12.3 Centroids of Composite Areas
12.4 Moments of Inertia of Plane Areas	12.4 Moments of Inertia of Plane Areas
12.5 Parallel-Axis Theorem for Moments of Inertia	12.5 Parallel-Axis Theorem for Moments of Inertia
12.6 Polar Moments of Inertia	12.6 Polar Moments of Inertia
12.7 Products of Inertia	12.7 Products of Inertia
12.8 Rotation of Axes	12.8 Rotation of Axes
12.9 Principal Axes and Principal Moments of Inertia	12.9 Principal Axes and Principal Moments of Inertia
References and Historical Notes	References and Historical Notes
Appendices	Appendices
