

1 .my dog is 4 years old and it had recently developed lot of bad breadth, what should I do?

Ans – Almost 80% of dogs by the age of 3 years develop gum or teeth problems. Feeding dry food and special dental care products like Dentastix will reduce the plaque or tartar problem. Infact the best way to prevent oral issues is to start Dentastix as a daily snack since the dog has become adult. We also have tubos that will ensure high level of oral hygiene among puppies.

2. How by chewing something the tartar can come down?

Ans – Dentastix is a chew that is designed in a unique way that while chewing it also works to clean teeth. It also ingredients which will help in preventing tartar build up

3. Is treats are healthy?

Ans – Generally the treats are high on fats but Meatjerky from mars petcare has only 1% of fat content. The treat is delicious and absolutely healthy. Dentastix is also very low in energy or fat
