

Carl's Blackout Cloth, Projector Screen Material, White, Gain 1.0

Carl has a solution for every DIY movie screen builder! We have several projector screen materials to suite your technical and installation needs. We offer several quality fabrics, colors, textures and sizes of projector screen material. **Carl's Place is the internet's leading DIY resource for quality projector screen material, fixed frames, projection screens and DIY kits at a great low price!**

Blackout Cloth is our top-selling Projector Screen Material making it a budget-friendly, do-it-yourself screen building favorite! This front projection blackout fabric surface is the standard to which all other screen surfaces are compared. Blackout Cloth's matte white surface and gain of 1.0 diffuse light in all directions so the image can be seen from any angle. Blackout Cloth material is 70% polyester, 30% cotton blend fabric that is coated with multiple layers of thin rubber and is 110" wide. It is suitable for use in a variety of settings with accurate color and clarity in a dark viewing environment where ambient light is controlled. Blackout Cloth screen material is extremely sturdy and is best for a wooden fixed frame where it will be stretched tightly and evenly in all four directions (tight like a drum). It also works for our tension-mounted Finished Edge Screens, Hanging & Standing Kits. You should project onto the smooth, rubber side of Blackout Cloth projector screen material. Due to its popularity, several sizes are available to ship from Carl's Place (CP) or from Amazon's warehouse (FBA). Why buy Blackout Cloth? Buy Blackout Cloth for a perfect entry-level, budget-friendly DIY projector screen!

Don't forget to Buy Carl's Black Felt Tape for a professional-looking, contrast-boosting border (*sold separately*).

- The front projection standard to which all other screen surfaces are compared
- Matte white with a gain of 1.0 so the image can be seen from any angle
- Provides accurate color & clarity in a dark environment where ambient light is controlled
- Tension-Mount Blackout Cloth for best results (stretch tight--like an artist's canvas)
- Best for an indoor, wooden fixed frame application
- 70% polyester, 30% cotton with rubber coating
- The smooth texture side with a rubber coating faces the audience
- Shipping package dimensions and weights are listed below

*** In the DIY market there is a wide range of comfort levels, skill sets & abilities. If you are at all concerned about folds & wrinkles you may want to consider ordering your material rolled.**

Blackout Cloth ships folded by default, however select sizes have a packaging option to ship rolled on a tube for an additional fee. Shipping carriers charge extra for the length of the tube.

- **If budget is your priority**, select folded. Tension-mounting will pull out folds and wrinkles from shipping, although it may take extra time and effort to install.
- **If ease of installation is your priority**, select an option that is rolled on a tube.
