

# Go Green Face Paint™

Suggestions for best results:

DO NOT use water to apply - it is a cream based 100% certified organic face paint.

For large applications, a cosmetic sponge works well. Be sure to load enough paint on the sponge before applying.

Allow a little time to let the base color dry before applying detail on top. A small fan helps it to dry, if available.

Setting powder (similar to talc powder) used sparingly helps speed up the drying of the facepaint but don't use too much or it will dull the colors.

For small applications, using a #2 or #4 detail brush works best. Load a large amount of paint for best results.

Use a separate brush for black and dark colors and another one for light colors

Be sure to clean brushes before loading a new paint or else it will mix in with the new paint color.

Clean brushes promptly when finished. Baby wipes can be used to initially clean the brushes and then dishwashing liquid and water.
