

Size/Fit Reference – Aeron® Chair

This reference helps people select A-, B-, or C-size chairs when the three sizes are not available for actual test sitting. Height and weight are key indicators of suitable chair-size choice. Since the B-size chair is designed to fit a broad range of people, Herman Miller recommends it for users who fall in the A/B or B/C category. This chart applies to Aeron chairs with the extended-height-range pneumatic height-adjustment cylinder.

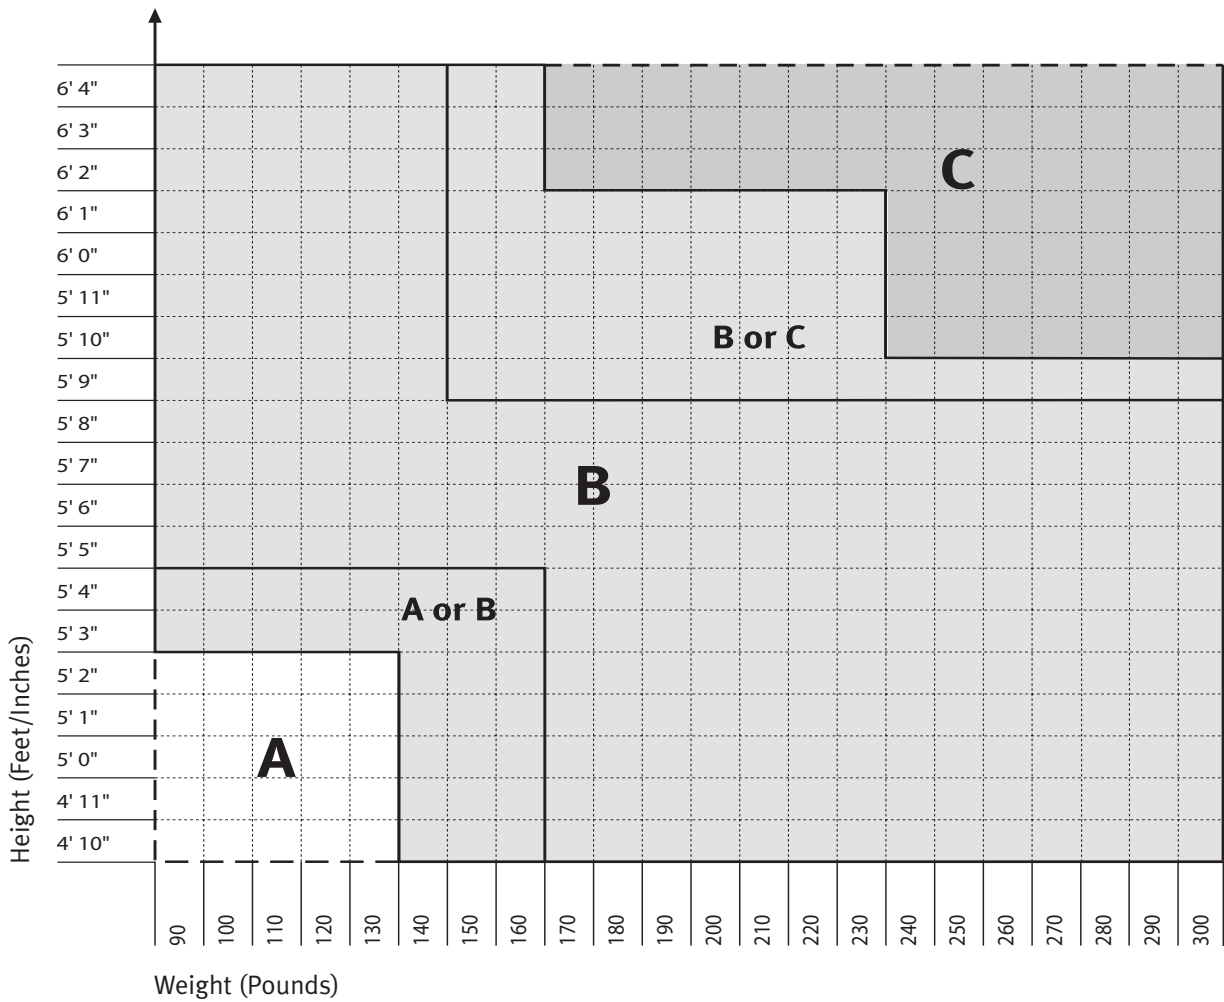

To determine which chair size is best, find the point of intersection for your height and weight. Aeron A-, B-, and C-size chairs are tested and warranted for use by persons 300 pounds and under.

Size/Fit Reference – Equa 2® Chairs

This reference helps people select A-, B-, or C-size chairs when the three sizes are not available for actual test sitting. Height and weight are key indicators of suitable chair-size choice. Since the B-size chair is designed to fit a broad range of people, Herman Miller recommends it for users who fall in the A/B or B/C category.

To determine which chair size is best, find the point of intersection for your height and weight. Equa 2 A-, B-, and C-size chairs are tested and warranted for use by persons 300 pounds and under.

Size/Fit Reference – Ambi® Chair

This reference helps people select the appropriate seat height (standard- or low-height range) and seat-depth option. Height is a key indicator for suitable adjustment choices.

Adjustable back height is standard on Ambi work chairs.

To determine which adjustment is best, match overall height with the suggested adjustment options.

Ambi work chairs are tested and warranted for use by persons 300 pounds and under.
