

Paint Repair Pen

What To Expect:

A) Very Deep Scratches & Stone Chips:

If the scratch has gone through the clear coat and the paint color, PRP will fill and seal the scratch to prevent Rust, Oxidation, Paint Blistering, and further damage. The scratch may still be visible, but the integrity of the car will be protected and should not worsen. You can better hide the scratch using a matching color touch up paint from the car manufacturer, then finishing the job with Quixx PRP.

B) Clear Coat Scratches:

If the scratch has only penetrated the clear coat layer, but has not gone through the paint color, PRP will fill and seal the scratch to prevent further damage, as well as significantly reduce the visibility of the scratch for a clean, smooth appearance.
