## Bellows Duster

One duster for voids AND crack & crevice.

### *The first choice of professionals, and now it's even better!*

From crack and crevice to dusting large voids, it's the most versatile. Dip bellows into powder for quick 1/2 lb. fill (boric acid)-less for DTE. No mess, no waste.

Wider dispersion ensures better coverage, higher kill.

Avoids risk of shock when dusting in and through outlets. Body, bellows, tube & nozzle are all long-life plastic.

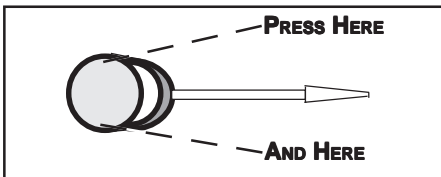

Won't rust, won't come apart during use.

**M322 pest pistol professional:**  
Comes with parts bag and a spare nozzle tip that you can customize.  
**Blue.** Case of 80.

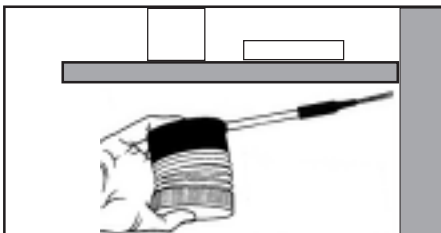

**M345 Roach Powder applicator:**  
The basic durable, versatile duster, without parts bag or spare nozzle. **Red.** Case of 80.

**M01 Twelve-inch extension tube.**  
Fits either version. Pack of 12.  
**Flexible.**

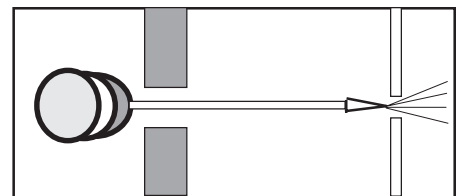

Wide bellows mouth makes filling easy, and interior filter helps prevent clogging. One quick tap of the rear of the base on a hard surface resolves most clogs without slowing work.

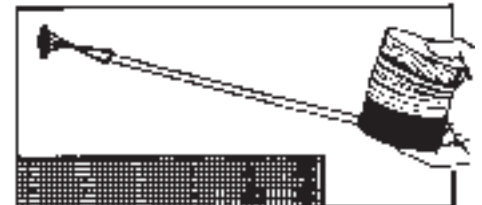

For voids: hold with both hands, fingers on the base, palms on edge of bellows. [Pressing on the edge, not middle, gives better leverage.]

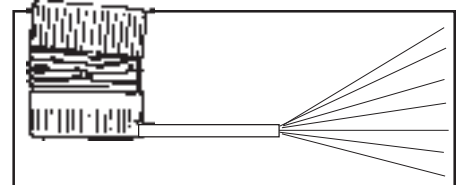

For crack and crevice: Rotate for just the right amount of dust.

Use 12-inch extension for recessed openings....

Or to reach high and low.

Remove the tip for WIDE coverage, such as drop ceilings and attic voids.
