

How to enable Home Data permission on the Wemo App

Home Data permission allows the Wemo App and the Apple Home app to communicate with each other. If Home Data is not enabled on your Wemo App, your Wemo® devices will not appear in the Apple Home app. The steps below will show you how to enable Home Data permission on the Wemo App.

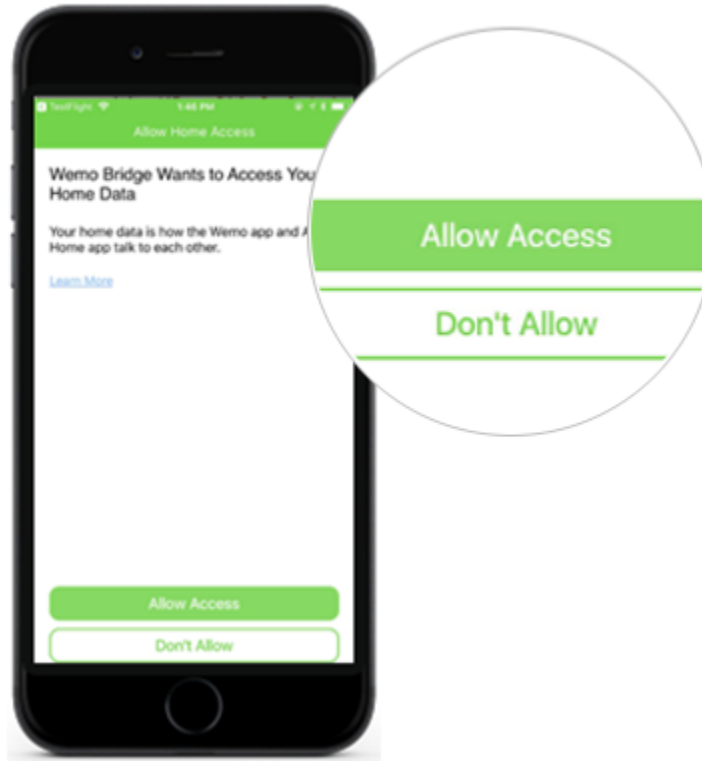

NOTE: These steps are applicable for the **Wemo® Mini, F7C063** and the **Wemo® Bridge, F7C074**.

Step 1: When the Wemo App is launched, you will get a prompt to allow Home Data permission. Tap **OK**.

Step 2: If access is not allowed, the Wemo App will display a screen that explains why you need it enabled. Select **Allow Access**. If you need more information, tap **Learn**

More.

QUICK TIP: Another way of enabling Home Data permission is to go to the iOS Settings and look for **Wemo**. Toggle the **Home Data** switch to enable it.

You have now successfully enabled Home Data permission. You can proceed to the Apple Home app and start adding your accessories.
