# .How to pair the Bluetooth wireless system with a source device

- **If model-specific information is required to complete any of the steps in this solution, refer to the operating instructions supplied with the product. Go to Manuals, Specifications & Warranty.**

- **Be sure to place the Bluetooth® wireless devices within 1 meter (3 ft) of each other.**

- **Make sure that both devices have sufficient charge or power.**

1. Verify that the power of the unit is off. If the unit powers on when you connect it to a power source, press and hold the **POWER** button to turn the unit off.

2. Turn on the connecting Bluetooth device and place it within 3 feet (1 meter) of this unit.

3. Press and hold the **ID SET** button (for the speaker) or the ▶ɪɪ /**POWER** button (for the headphones) for more than 7 seconds while the Bluetooth headphones are turned off.

   When the indicator starts to blink quickly, release the button. The Bluetooth headphones enter Pairing mode.

   NOTES:

- o The button that must be held down to enter Pairing mode differs depending on the product you use, so check the instruction manual for your Bluetooth headphones.
- o The pairing mode is canceled and this unit is turned off after about five minutes. If the pairing mode is canceled while performing this procedure, start over from step 1.
- o When pairing for the first time, press and hold the ▶ll /**POWER** button for about 2 seconds while the Bluetooth headphones are turned off.

4. When the **POWER** (green or red) indicator and the **COMMUNICATION STATUS** (blue) indicator starts flashing together, release the **ID SET** button (for the speaker). The unit now enters the pairing mode.

5. Perform the pairing procedure on the Bluetooth audio device to detect this unit.

   NOTES:

   - o The list of detected devices appear on the display of the Bluetooth audio device.
   - o Some devices cannot display the list of detected devices.
   - o Depending on the device, Bluetooth connection may start automatically.

6. Select the model number of this unit shown in the display of the Bluetooth audio device.

   NOTE: If the model number of this unit does not display, start over from step 1.

7. If passcode input is required on the display of the Bluetooth audio device, input **0000** (four zeros).

   NOTES:

   - o The **Passcode** may also be referred to as **Passkey**, **PIN code**, **PIN number** or **Password**.
   - o If the unit requires a pass code, the passcode is fixed to 0000. This unit cannot be paired with a Bluetooth audio device whose passcode is not 0000.
   - o Depending on the connected Bluetooth device, a passcode may not be needed. Some Bluetooth devices connect automatically. Refer to the operating instructions supplied with your Bluetooth device for detailed information.

8. Both the **POWER** (green) indicator and the **COMMUNICATION STATUS** (blue) indicator will light up steady indicating that pairing is complete and the pairing information is memorized on this unit.

NOTES:

- If you turn off this unit or the Bluetooth audio device before the Bluetooth connection is complete, pairing information is not memorized and pairing will not be completed.
- If you are unable to pair your devices, a different solution is available for troubleshooting.
