

# Update the firmware of your Beats product

Use Beats Updater to keep your Beats wireless headphones, earphones, and speakers up to date with the latest firmware.

## Install Beats Updater

If you meet the following system requirements, [download Beats Updater](#), then double-click the downloaded file and follow the onscreen instructions.

- Pill 2.0, Beats Pill<sup>+</sup>, Powerbeats<sup>2</sup> Wireless, Studio Wireless, or Solo<sup>2</sup> Wireless
- A recent version of Apple Safari, Google Chrome, Mozilla Firefox, or Microsoft Internet Explorer
- OS X Mountain Lion v10.8 or later; or Windows 7 or later

## Plug into USB port

Plug your Beats product directly into the USB port of your computer using the appropriate cable:

- Beats Pill<sup>+</sup>, Lightning to USB cable
- Other Beats products: micro-USB to USB cable that supports data transfer

## Check for firmware updates

Click the Beats status icon in your menu bar, then click the name of your product to go to the [Beats Updater website](#).

If a firmware update is available, and your battery is at least 20% charged, you'll see an Update button in your browser window.

## **Update your firmware**

Click Update, then follow the onscreen instructions.

## **If Beats Updater doesn't see your device or complete the update**

- Make sure that the USB cable is securely connected to your computer and Beats product.
- Use another USB port on your computer. Don't use a USB hub.
- Turn off your Beats product, then turn it back on.
