

Troubleshooting tips:

- If unit doesn't light up gently twist the lamp to make sure bulb ends are seated correctly into the socket, it's the same process as installing a florescent lamp in a ceiling fixture.
- Check the on/off switch and make sure the unit is in the on position.
- Note that this is a true UV fixture and the bulb is not supposed to emit a lot of visible light, when the fixture is on it will illuminate light colors such as white and make them glow.
