

Sound Blaster E1: Audio Playback from Your Mobile Device

- **Applicable To:** Sound Blaster E1 (SB1600)
- This article explains how use the Sound Blaster E1 for music playback from your mobile device.

[Click to enlarge](#)

The Sound Blaster E1 can be connected to your mobile device for music playback. For instructions on this setup, please follow the instructions below:

1. Connect your mobile device to the Sound Blaster E1 via 4-pole analog cable (see diagram above).
2. Connect a headphone to the **Headphone Out/Line Out** port of the Sound Blaster E1.
3. You may now play music from your Mobile Device on your headphones via the Sound Blaster E1.
4. One of the features of the Sound Blaster E1 is **Music Sharing**. To do this, simply connect another headphone to the **Headphone Out/Mic-in** port.
5. Note: The Sound Blaster E1 is designed for audio playback and voice transmission, thus a 4-pole jack cable is included so that it can work with devices that support both audio and voice such as smartphones and tablets. In some cases, older MP3 players or media devices may not be compatible with a 4-pole cable configuration. If you experience low volume or no significant increase in audio volume and clarity, we recommend connecting the Sound Blaster E1 to your media device using a standard stereo cable rather than the included 4-pole cable. You should notice an immediate increase in volume and quality.
