Quick Start Guide

Writing digital is as easy as 1-2-3!

1. DOWNLOAD APP
   - Download the free Livescribe App from Google Play / Amazon App Store / App Store

2. POWER ON & PAIR
   - Power ON the smartpen by plugging one end of the included micro-USB cable into the Aegir smartpen and the other end into a USB power source.
     - Pen will power ON with a beep and the smartpen LED indicator will blink blue, indicating that the pen is ready to pair with your smartphone/tablet.
     - When the LED indicator is blinking blue, open the Livescribe app on your smartphone or tablet. Select Connect to Smartpen option in the Livescribe app to finish pairing. The smartpen will beep and the LED indicator will stop blue upon successful pairing.

3. START WRITING
   - That's it! Unplug the micro USB cable and start writing with your smartpen on any Livescribe dot pattern enabled smartpaper and see your notes appear real-time on the Livescribe app.

Notes:
- Additional pairing methods are detailed in page 2
- Active Bluetooth connection is not necessary to use your pen (refer page 2 for details)
- You need to pair your smartpen only once with each device that you use - once paired, your smartpen will automatically connect to that device when you open the Livescribe app and have the device within Bluetooth connection range with the pen.
LiveScribe Smartpaper and Paper-controls
LiveScribe smartpaper has a unique dot-pattern printed on every sheet. Along with LiveScribe's smartpens, this proprietary pattern enables digital note-taking. This smartpaper is available in different sizes and formats. LiveScribe smartpaper also comes with printed paper-controls that are activated by tapping on them with your smartpen to carry out a pre-set action. Some paper-controls that work with the Aegir smartpen are:

- **Smartpen status**
- **Tagging**
- **Quick-send**
- **Recording**

Getting the most from your Aegir smartpen

Write even when you are not around smartphone or tablet:
The Aegir smartpen does not require an active Bluetooth connection with the LiveScribe app to capture your notes. Anything you write is stored in the pen and copied to your app the next time you connect.

Recording voice while taking notes - Pencasts:
Pencasts are digital versions of your notes that have audio recordings synced to them for interactive playback. With your smartpen connected via Bluetooth to your device, tap on the record icon in LiveScribe smartpaper to record audio using the microphone on your smartphone or tablet. For playback, simply tap on the written word and hear recorded audio from that particular instance in your device.

Search your handwriting:
Your handwriting is searchable, like everything else in your life. To search for a particular phrase from across all your notes, use search function in the LiveScribe app.

Make your notes accessible everywhere:
Send your notes through mail, text and more, in the format you need – PDF, PNG, TXT, docx, etc. Link your cloud services (Google Drive/ Dropbox/OneNote/Evernote) and enable auto-sync in the LiveScribe app to automatically push your notes to the cloud.

Pairing methods:
Bring your smartpen to pairing mode using one of two methods below:

- **Pen-down**: Flashing blue LED starts blinking blue
- **Pen-up**: Flashing blue LED

Once in pairing mode, select Connect to Smartpen in the LiveScribec app to finish pairing.
Know your Aegir smartpen

Ink cartridge
Replaceable 4f style ink cartridge. Visit www.livescribe.com for replacement details and more options.

LED status indicator
Connection
- **Solid Blue**: Smartpen is connected via Bluetooth to a smartphone/tablet device.
- **Solid Green**: Pen is awake and can be used to capture notes, but is not currently connected to any Bluetooth enabled device.
- **Blinking Blue**: Pen is in pairing mode and is waiting for initial Bluetooth connection. The smartpen must be in this state to pair to a new device.

Battery
- **Solid Orange**: Low battery - needs charging
  Smartpen battery life is at 20%. At 5% battery level, the pen shuts down automatically with a beep and will not capture notes.
- **Blinking Green**: Charging
  Smartpen battery is charging - when connected to a USB power source

Error alert
- **Blinking Red**: Memory
  Possible errors include improper writing angle, smartpen memory is full, unrecognized writing surface, etc.

Memory
- **Blinking Red**: Memory
  Smartpen memory is at or above 90% of its capacity. This notification will repeat every time the pen wakes up until memory is cleared. When smartpen memory is full, the pen will not capture any data and will trigger an error notification when you continue to write.

To clear memory, (1) connect smartpen to your device (2) tap clear memory under smartpen settings.

Please ensure pen data is synced with your device before performing this step.

**Warranty**

Livescribe warrants the smarter pen to be free from defects in materials and workmanship under normal use for a period of 1 year from the date of original retail purchase. You may also have other rights that vary from state to state and country to country.

**Regulatory**

This device complies with Part 15 of FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) the device must accept any interference received, including interference that may cause undesired operation. Caution: Any unauthorized changes or modifications to the device not expressly approved by Livescribe, Inc. could void your authority to operate this device. Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
