

How do you use the Lectrofan Micro?

With 10 unique, no-looping sounds, you have everything you need for a good nights sleep. There are 5 different fan sounds, 4 white noises and an ocean sound story, all created by an innovative algorithm, so that each sound is truly unique. Don't worry about hearing the same old sound repeating over and over, like some other sound machine, because with the Lectrofan Micro you never have this problem.

For such a small device, the volume is really powerful and you can control the volume from whisper quiet to the full volume of the original Lectrofan. Alter the volume using the 1db increments and personalize the volume of your chosen sound so that it is perfect for your mood.

You can even plug your smartphone or tablet into the Lectrofan Micro and you have a powerful Bluetooth speaker that can play your own tunes or melodies anywhere, anytime. Twist the speakers to direct the sounds in any direction and you have your own personal wireless sound machine at your fingertips.

To use the Lectrofan Micro, simply press the power button ON, then use the other buttons to select the sound and the volume.

There are three buttons on the front of the Micro, one button is the ON/OFF/PLAY/PAUSE button, another is the volume +/track back button and the last is the volume -/track forward button.

So just turn the Micro ON, select your sound and the volume and you are good to go. If you want to play your own songs using the Bluetooth feature, before you can use your Micro as a Bluetooth speaker, you need to pair it with your audio source, such as your smart phone or tablet.

You can still use your smart phone to make and receive calls, while it is connected to your Lectrofan Micro, the audio stream will simply be paused while you take the call.

Who should use the Lectrofan Micro?

This is such a lightweight, compact and easy to use wireless sound machine that just about anyone will find some benefit in using the Lectrofan Micro.

You can use it at home in the bedroom, nursery or study (the latter to help you tune out annoying noises), in the office to keep conversations private or to drown out office noise, in the car to calm unsettled babies or toddlers, at the supermarket to calm your little one, in your tent when camping, on holiday at hotels, and just absolutely everywhere!

You can pop it into your carry on luggage, your handbag, backpack or your briefcase.

For people who can't fall asleep without the fan turned on and for anyone who has to sleep during the day or in a noisy environment, lives close to traffic, trains or under flight paths, has a noise neighborhood, barking dogs, a partner who snores – you name it – the Lectrofan Micro has the power to block out all of these noises, relax you and send you off to sleep.
