

BLUETOOTH® enabled compatible phones

The TL92273, TL96273, CLP99283, CLP99383 and CLP99483 series have been tested for compatibility with many of the most popular brands of BLUETOOTH® technology-enabled cell phones and headsets. Cellular phones from Motorola, Samsung, LG, Nokia, Sony, BlackBerry (RIM), and Apple have been tested and found to be compatible with this product.

The list below represents models that were tested and confirmed for basic Connect to Cell™ operation, i.e. making and receiving calls from your cellular plan and downloading phonebook entries from your cell phone to the AT&T telephone base. It also represents models that were tested and confirmed to support our Connect to Cell app* feature and Ringtone Share feature.**

Please note, some products are compatible for basic operation as well as the Connect to Cell app and/or Ringtone Share feature, but not all. Use the table below to determine each product's level of compatibility.

Other cell phones and headsets may be compatible—this list only represents those models which were tested and confirmed compatible.

*** Connect to Cell app**

Feature available for Android mobile phones OS version 2.3 or above. To use the app, you must first download for free using the Google Play® Store app.

**** Ringtone Share**

Merge more than just your cellular calls with your home phone. Set your cordless phone to play your iPhone® (iOS4.1 or later) ringtone for a fun new way to bring your lines together.
