

Bluetooth Remote Instructions

Instructions to setup and use:

1. Insert battery and turn the switch "ON" the Bluetooth remote (battery may already be installed).
2. Turn Bluetooth "ON" in your device (Go to Settings > Bluetooth > On)
3. Then, while still in your Bluetooth screen on your device, CHOOSE "AB Shutter 3" (may temporarily say keyboard) in the devices that come up listed to pair it. This will make it connect.

(Android users: DO NOT RENAME this, as it will void the warranty and make the remote not work). Also, DO NOT turn on text.)
4. It will say "Connected" next to Shutter in the devices list after it is paired.
5. Open your built-in camera app on your device.
6. Push the appropriate button on the Bluetooth remote (One is marked for iPhone/Camera 360 App and the other for Android)

Troubleshooting:

If you cannot get it to take pictures with your built-in camera app, then you can download other compatible apps such as "Camera 360" from the Apple App Store.

If you are having trouble getting video to start or stop on your android device, but can take pictures fine, please download "A Better Camera" for Android from the Google Play Store and use it for video on your android device.

If the blue LED light is not blinking on the remote when you are trying to pair it, or if you cannot get it to connect at all, please let us know by clicking on "Contact Seller" button in your order history by this product, or by the seller DaVoice in the product listing, then you will see the "Have a Question for DaVoice? Ask a question" button and we can send you a replacement free of charge, or use the link below:

Please include your order number so we can pull your information.

Selfie Stick Instructions

The selfie sticks are telescopic so you can take a selfie further away from you. To do this, pull outward on the metal part of the stick. If the weight of your phone is too heavy, do not extend the metal telescope of the pole out as far, as this will make it more stable for heavier phones.

To attach the cell phone tripod adapter to the selfie stick, you screw it on the threads of the adapter with the wheel right below the screw on the selfie stick. Tighten it up before putting your phone in the adapter.

The adapter is spring-loaded, so you can pull it open some (by pulling the rubber piece on top) to insert your cell phone. Release the rubber grip piece. The adapter will put enough pressure on the phone from the spring action to hold the cell phone in place on the selfie stick.

The knob on the side of the selfie stick head is used to tighten up the angle you would like to have the phone adjusted to for taking the selfies.
