Disclaimer: This description is only used as a basic guide. As the software is continuously updated, the content of the text interface has changed. Please refer to the actual function of the APP.

I . WeBack - add device

a) Add device

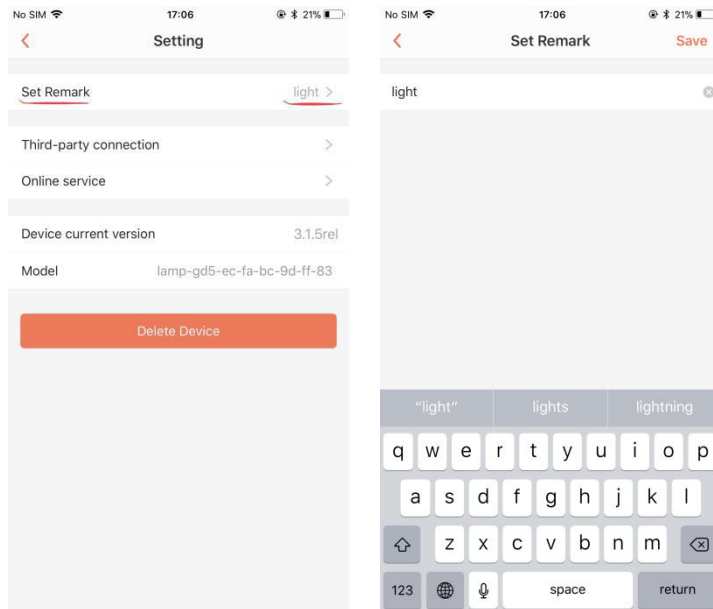

Click "Add device" → Scanning device QR code → Confirm 2.4G wifi information → Follow the prompts to activate the device correctly → Establish connection → Waiting for the device to go online

b) Modify device name

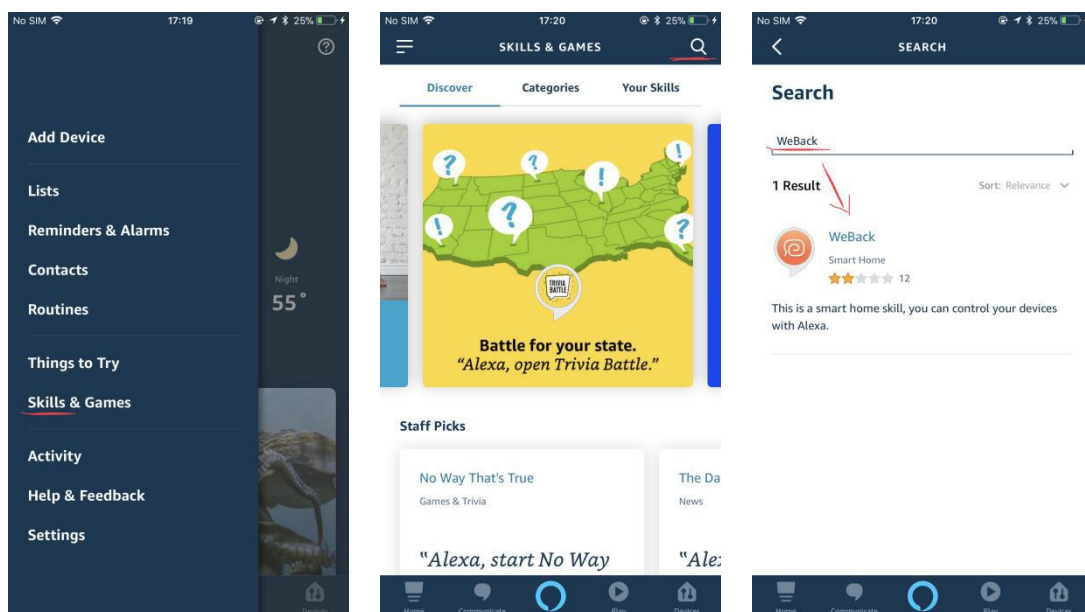

Long press the device card to enter the device settings page →

Modify device name (The name must be a simple word that is easily recognized by the Echo)
for example: robot, light, socket...

II . Alexa - search skill

Start Amazon Alexa app (Confirm that Alexa Echo is connected to the app, please refer to the instructions of alexa) → Click on "Skills" in the settings page → Search for "WeBack"

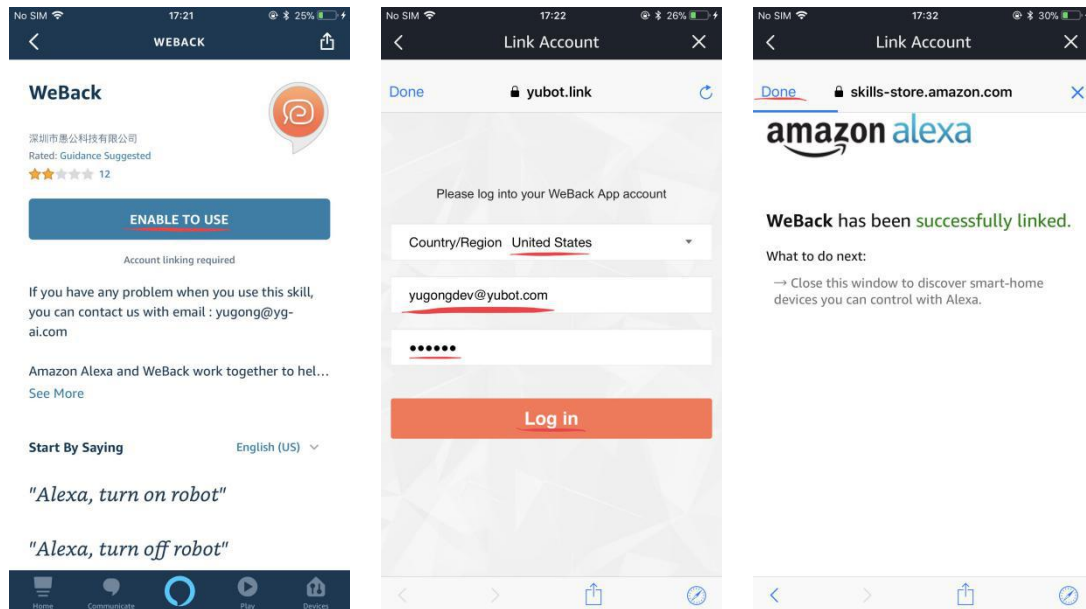

III . Alexa - ENABLE WeBack

Click ENABLE under "WeBack" skill → Choose the right country/region →

Enter the login account for "WeBack" (Mailbox or mobile number, excluding area code) →

Enter the correct login password for "WeBack" → Click to login

IV . Alexa - voice control

a) Discover device

Two ways to discover devices

1. Voice control command: "Alexa, discover device."
2. Click the "Discover Device" button on the Amazon Alexa app.

b) Controlling device

Voice control command:

1. "Alexa, turn on the *robot*."
2. "Alexa, turn off the *robot*."
