The manual content is subject to its newest version.

Trouble Shooting Guide

1) No Voice Recordings / No Songs

If there is no voice recordings, or you have deleted all recordings in your voice recorder, when you open your voice recorder, you will see " no voice recordings" on the screen. Don't worry, you could just go ahead to press REC, it will records, because no any recordings on the device, so some button seems not work.

When show "no songs", it is because there is no music file on the device, and Just press and hold STOP button switch back to DVR folder.

2) Format Error / Disk Error

Disk Error: do not format your voice recorder on the computer, especially on the Mac computer, that will cause system firmware damaged. When device is

formatting, do not shut down the device. If mistakenly this happened, contact us for system upgrade support@evistr.com

Format Error: this usually happens from 2 aspect:

A.During recording, directly push down the POWER BUTTON to OFF position, that will cause file damage, before switch off your voice recorder, you need to press STOP save the recordings first

B.Computer do not support the .wav file. The recordings were saved as .wav format. For WINDOWS 10 or MAC user may encounter with this issue. Don't worry

You could download the free VLC Media Player to solve this issue

http://www.videolan.org/vlc/

Or you could try to recorder at low bit rate, the recording will save as MP3 format

3)How to connect to computer

Use the attached micro USB cable connect to your computer, or your android phone cable

If you failed connect it to your computer, you could contact us, support@evistr.com we will help you solve it, or you could do some trouble shooting

Or you could go to the simple way, just change a new socket or new cable. Because this issue usually happens like you failed connect your flash drive to your computer, they are the same issues.

3) Cannot find my recordings in the recorder

This mainly because when you open the voice recorder, it reads the MUSIC folder, you could long press STOP switch back to music folder

Or you could connect it to your computer to check whether there is recordings in your recorder

4) How to open voice activated function

Go to menu options, find record settings, enter it , select Voice-activated Record, open AVR mode, and press M confirm it.

Now press REC, you will see VOX on the screen, it means you have successfully set voice activated recording function

6)Press REC, it not recording

First check, the recording light blink or not, and the dynamic balanced wave is waving or not

Second, can you see VOX on the screen

If so, it means you have open the voice activated recording function, during this setting, it will only records when high enough decibels sound detected, you could go to record setting, find voice activated sensitivity, and adjust it. It helps

But we suggest you could close the AVR mode, if you do not want this function

7)Why it is only playing 10 seconds each recordings / music

This is because you enter view playing mode, it will playback 10 seconds of each file

At the status of playback, you could press M (menu), enter menu options, find Play settings enter it

Change the play mode to repeat all, press M

(menu), confirm your setting

8)Why it playback in random

In play setting, find play mode, find "Shuffle", select close, and press M (menu) confirm your setting.

9)How to use the A-B repeat function

During playback, press and hold M, you will see A on the screen, and B is blink, it selected the start point

Long press M again, select point B

Now it will playback between Point A to B

10)The recording is noise

Don't recording near computer, electric fans, air conditioner, sound bar that will easily cause noise, the recorder will pickup this statics noise

11)It suddenly shows delete file

It is because enter the delete mode, select NO, and press M(menu) confirm it, you will exit the delete mode.

12) My recorder auto boot on
This is because the AUTO record function is open, go to record setting, find AUTO record function, and close it.

13) It seems something wrong with the recorder, and cannot correct the settings

Do not worry, go system setting,and select factory setting, restore it to factory setting. And all settings will be restored in default.

Mostly issue will be solved.

14) Space is full

When space is full, you could connect to your computer, and copy out your recordings, and back it up to your computer, and then eject your recorder.

Go to menu options, in system setting, find format device, format the device, all files will be erased. And release new space for your future recording.

The voice recorder has a limited storage at 8GB, so after a while of using, it may be full of storage, you need to back up it on your computer

We will regular update our E-book, based on our customer feedback. We hope to get more interaction from your side, and let us know more we could do, you could visit more of this information from our website: http://blog.evistr.com

Or contact our customer support Support@evistr.com let us help you upgrade the system firmware, when there is a troubles with your recorder, and cannot correct it.
