

How To Connect VS701MW ?

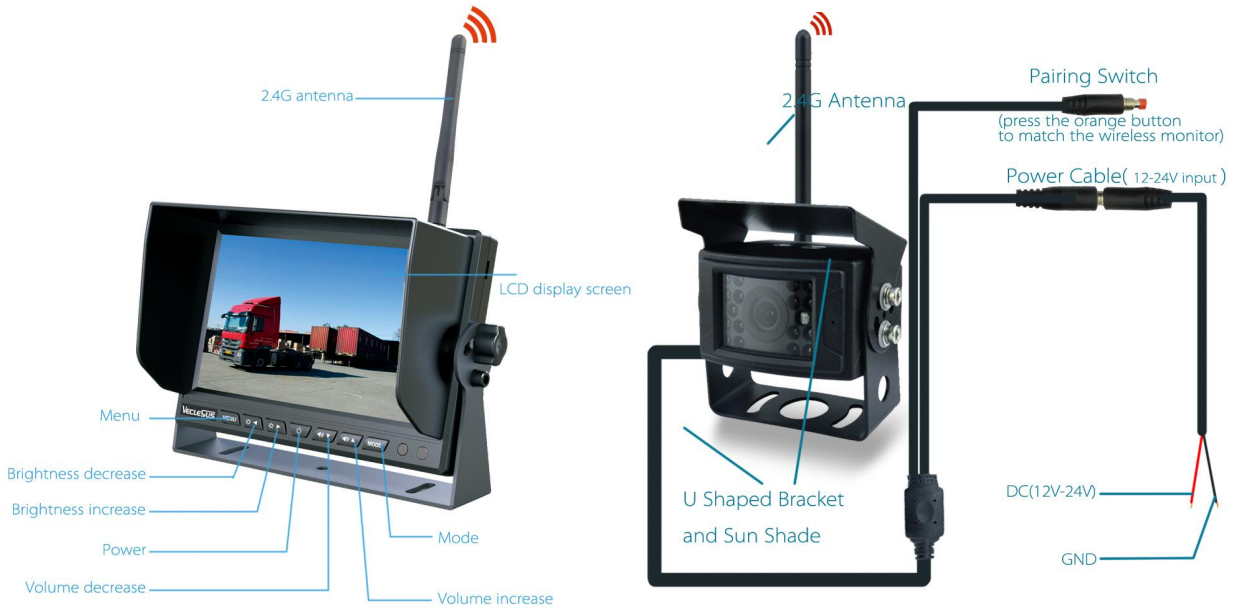

amazon Car Rear View System

veclesus

1 Introduction

2 Package

All parts in the packing

Wireless Rear View Backup Camera System

3 Connection

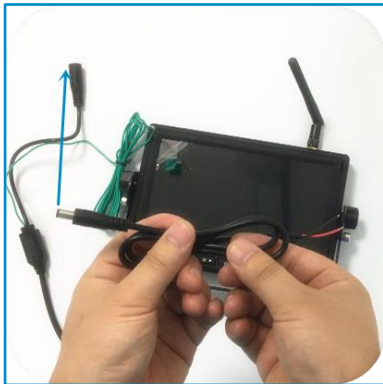

1 Install short antenna to the monitor to the monitor

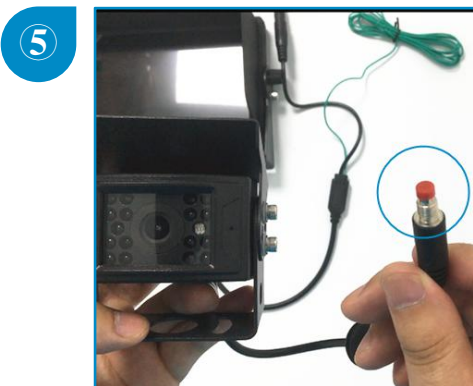

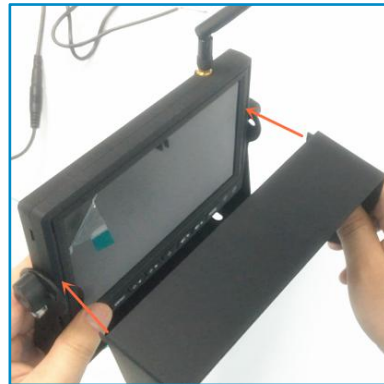

2 Install another short antenna to the backup camera

3 Install the power cord

4 Install sunshade to the monitor

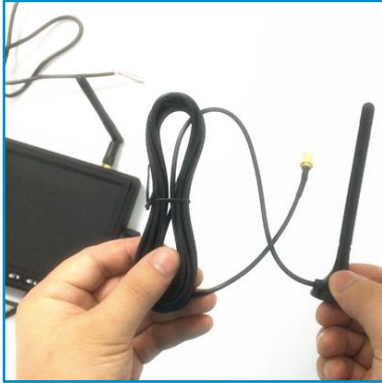

Pairing Button

This is for matching the monitor and the camera. They were already paired before leaving the factory. You don't need to configure them again.

Tips: If there is no image on display when the system is powered on, try pressing this button multiple times to pair the camera to the monitor.

Wireless Rear View Backup Camera System

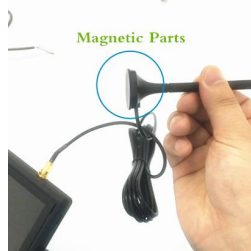

6

Long Antenna

This is a spare antenna.

If you use this system on long vehicle and the signal is not stable during driving, you can use it to extend the antenna on the outside of the driving room.

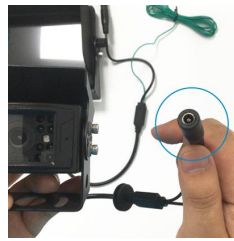

7

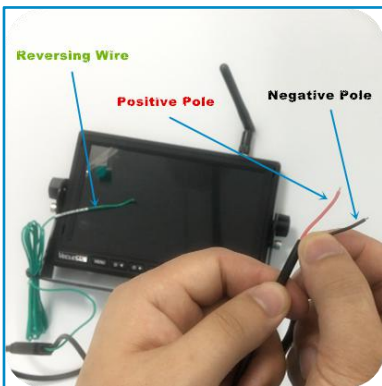

Cigarette Lighter Power Cord

This is a second way to connect monitor to the power source.

8

Power Line

Red Wire(Positive Pole)

This wire needs to be connected to +12-24 V power supply. Many of the lines in the center console are accessible. You should use a multimeter to test if the voltage meets the requirement.

Black Wire(Negative Pole)

The GND wire needs to be connected to the negative pole.

Green Wire(Reversing Line)

Just as its name implies, it needs to be connected to the reverse power such as reversing light, reverse gear power or any other wires which can get power only reversing.
