

BRITA Smart Light

The status indication is based on time and volume measurement.

Using an intelligent mechanism the volume is recorded by registering the amount of water flowing out, when the jug is tilted during usage.

For first usage and for every reset, the LED button needs to be pressed for 5 seconds.

Just after pouring water, the LED blinks to show the cartridge status. Additionally the cartridge status can be checked any time by simply pressing the LED button.

When it is not used, the LED is deactivated to save energy. The battery lasts for approximately 5 years.

As the BRITA Smart Light is removable, the lid is dishwasher safe.

Green.

Cartridge okay, full filtration performance
LED is fading in and out 3 times

Yellow.

Caution, cartridge needs to be exchanged soon, please stock up
LED is flashing 3 times

Red.

Cartridge exhausted, replace immediately
LED is flashing 6 times

Reset.

Green LED is fading in and out 3 times after pressing the BRITA Smart Light for 5 seconds
