

Introduction of HOMEQUISITE Rainfall Shower Heads

BRINGING HOME - A NATURAL RAINFALL

After finishing the installation, you will enjoy

- **Gentler showering experience** - Soothing to soul, Caring to skin
- **Greater Coverage** - the waterfall covers more of you
- **Style and Beauty** - perfect match to even the most contemporary bathrooms

CHOOSE HOMEQUISTE BECAUSE ...

Prior to mass production, we went through customers' complains against the top selling Amazon shower heads and made following 3 Upgrades:

1. All Metal Construct: No Plastic (a.k.a ABS), we use 100% heavy duty solid stainless steel – highest grade 304
2. Pure Silicone: No cheap plastic or rubber, we use pure silicone nozzles. You should only buy showerheads with silicone nozzles. They are clogging proof, lime resistant and fungus free
3. State of Art Process: Laser-welding seamless one body construct - No leaks, no rusting, no bursting

[BUY IT ON AMAZON NOW](#)

3 REASONS YOU WILL LOVE HOMEQUISITE

OPTIMAL SIZE

A decent water pressure is imperative to rinse off shampoo quickly and thoroughly

- 8" or larger is *too big* for the water flow *to maintain pressure* under 2.5 GPM US Standard
- **6" is the optimal size.** We do 6" only

BETTER THAN THE STANDARD

A Chain is only as strong as its weakest link

- While all standard swivel ball has G ½ connection, the inner ball opening, being the bottleneck of the water flow, is a differentiator. Its size determines the ultimate water volume and pressure
- **Our swivel ball joint (on the left) is not only made of solid brass, but is bigger in hole opening allowing unobstructed water passage.** The joint alone often sells for nearly as much as a shower head (you can check yourself on Amazon)
- We are proud of this investment

REMOVABLE FLOW RESTRICTOR

- Our product packages an optional removable 2.5 GPM water flow restrictor
 - Put it on to reduce water usage
 - Take it off to allow maximum water pressure
- There is also a sand disk filter to keep the shower head clean of debris

LASER WELDING TECHNOLOGY

Seam leaking is one of customers' greatest headaches. Homequisite employs the cutting edge FIBER LASER WELDING process which

- Eliminates the use of screws which are the source of leaks, cracks, rust and deformation
- Forms a seamless one body construct that is completely water-tight
- Can sustain any high pressure

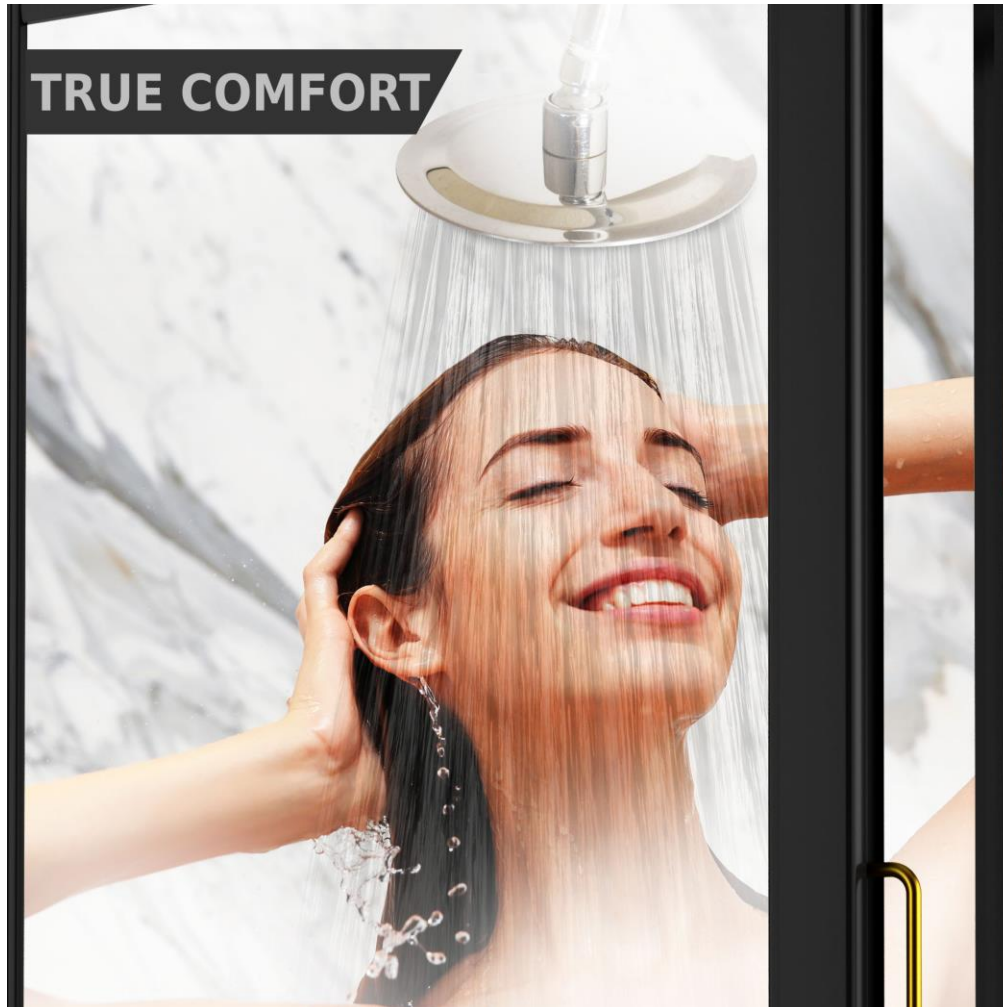

SELF-CLEANING NOZZLES

While plastic or rubber nozzles are cheaper, Homequisite high pressure water jets are delivered through 54 PURE SILICONE nozzles, which are:

- Anti-clogging
 - Anti-fungus
 - maintenance free
 - Elastic and precision engineered
- They are maintenance free and will last long time, and produce smooth and consistent shower experience every time!

EASY and VERSATILE INSTALLATION

Replace your old ones with our rain shower heads which can be:

- mounted overhead on the ceiling
- fixed on the wall of your bathtub or shower stall
- standalone on the pool side as an outdoor shower set

They are angle adjustable too.

Just quickly connect to any standard shower arm. No tools required. You receive a roll of Teflon tape as one of the bonuses to your product. everything you need is in the package.
