

LIVE with GUSTO

Latte lovers, start your machine.

YOU'RE ONLY A FEW STEPS AWAY FROM SIPPING YOUR FIRST LATTE. To ensure the health of your machine and the quality of your drinks, you need to prep your machine before you use it (think of it as warming up your engine on a cold winter day).

Remove and fill the water tank with purified water and then place it snugly back on the machine.

Set the scroll bar to 7.

Alternate pressing the cold and hot button to run water through the machine until the tank has emptied.

This process can take anywhere from 5-10 minutes and water may not dispense the first few times you push the button. Don't worry, this is normal and it's worth the wait.

Choose your favorite flavor and enjoy! You will need 2x capsules for specialty drinks (milk + espresso or chocolate) and 1x capsule for black coffees and espresso.

QUESTION: What if no water comes out during step 3? Also, there is a loud sound.

ANSWER: The pump needed to deliver 15 bars of professional pressure is just getting started. Keep trying for a few more cycles. Alternate pressing the cold and hot buttons. The sound you're hearing is the pump getting revved up. If water is still not coming out, please call consumer services so we can support you in getting your first cup. Monday-Friday 8AM-8PM ET and Saturday-Sunday 10AM-6:30PM ET.

If you have any questions about your Dolce Gusto Machine, please don't hesitate to call us:
