

SANCTUARY™ SLEEP PRODUCTS 9" FLUID SUPPORT 20 YR EXTENDED LIMITED WARRANTY

Fill in Warranty Registration Card and mail to Sanctuary™ Sleep Products. All Sanctuary™ Sleep Products Mattresses are manufactured from high quality selected vinyls and are dielectrically sealed prior to leaving the factory. Sanctuary™ Sleep Products warrants to the first purchaser only that every Sanctuary™ Sleep Products Flotation Mattress shall be free of failures resulting from workmanship for the periods outlined below from the date of purchase if used under normal circumstances and subject to the conditions listed herein.

- For the first 3 full years, Sanctuary™ Sleep Products will exchange or repair your mattress at no charge.
- From that time forward through the 6th year, Sanctuary™ Sleep Products will exchange your mattress for a new mattress for a payment of 60% of the then current Manufacturer's Suggested Retail Price.
- For years 7 through 9, Sanctuary™ Sleep Products will exchange your mattress for a new mattress for a payment of 70% of the then current Manufacturer's Suggested Retail Price.
- For years 10 through 12, Sanctuary™ Sleep Products will exchange your mattress for a new mattress for a payment of 80% of the then current Manufacturer's Suggested Retail Price.
- For years 13 through 20, Sanctuary™ Sleep Products will exchange your mattress for a new mattress for a payment of 90% of the then current Manufacturer's Suggested Retail Price.

This Warranty gives you specific legal rights, and you also may have other rights which vary from state to state.

TERMS AND CONDITIONS:

1. This warranty shall be void unless the water mattress is used in accordance with Sanctuary™ Sleep Products directions for installation and care, and in conjunction with an "approved" frame or bed system that provides perimeter support for the watermattress and a safety liner capable of capturing the entire liquid contents of the mattress should a rupture occur. This also voids the warranty unless the watermattress is used in conjunction with an approved waterbed heating system and water conditioner. The term "approved" as used herein means meeting or exceeding those standards set forth by the State of California.
2. The warranty shall be void unless the watermattress is used in conjunction with a rigid bed frame of a size certified by Sanctuary™ Sleep Products. In the case of "soft-sided" flotation sleep systems, the warranty on this watermattress shall be void. Consult your dealer or Sanctuary™ Sleep Products for certified sizes, types and brands.
3. This warranty does not apply to tears, slits, punctures or any damage caused by improper use, negligence, excessive strain, improper installation, accidents, acts of God, or failures caused by extreme temperatures.
4. Any apparently defective mattress must be returned to the dealer from whom it was originally purchased or to Sanctuary™ Sleep Products at the purchaser's expense together with the original proof of purchase with the damaged area in question clearly marked. Following evaluation, the mattress, or it's replacement, will be returned freight collect. Please allow 90 days for the performance of this warranty.
5. In no event shall Sanctuary™ Sleep Products or any of it's dealers be liable for any damages, personal or property, resulting from the use or misuse of the waterbed.

There is no express warranty on these goods.

This warranty is limited to repair or replacement of the mattress, at the option of Sanctuary™ Sleep Products, and any damages for breach of warranty due to consequential losses to property are expressly excluded. This is the exclusive express warranty for this mattress, and any other statements, or express warranties are expressly denied.

(Complete Warranty Registration below, detach, & mail within 14 days of purchase. Mail to: InnoMax • 530 W. Elk Place • Denver, CO 80216).

INSTALLATION INSTRUCTIONS

After installing heater,

- A. Make sure heater is not plugged in.
- B. Lay the safety liner inside the frame, matching the seams in the corners of the liner to the corners in the frame. Eliminate any creases or folds in the liner over the area where it covers the heater pad.
- C. Unfold the mattress and lay it over the liner with the valve side up, and the valve at the foot of the bed. Take time to center the mattress proportionally on all sides of the bed, as this will insure a correct fill. Pop up the telescopic valve on the mattress. For easiest filling, you should use the Fill & Drain Kit you purchased (optional). The hose adapter screws into the hose and will fit snugly into the valve without causing any damage to the valve.

Attach the faucet adapter provided to the nearest indoor facet and screw the hose into it. Pour water conditioner into mattress. This will inhibit algae growth. Repeat conditioner treatment every six months.

- D. Turn on warm water at a moderate rate and fill the mattress until it is within 1/2" to 1" from the top of the frame boards. With average water pressure it will take approx. 30-45 minutes to fill a King Size bed, so check periodically so as not to overflow it.
- E. Test the mattress for comfort. Add or remove a small amount of water until it feels most comfortable to you.
- F. Turn off the faucet and let the remaining water in the hose drain into the mattress. Then carefully

remove the hose from the mattress, leaving the valve popped up. Have no fear, the water won't spill out.

- G. Remove the air from your mattress by moving the air towards the filler valve with a broom handle rubbed smoothly against the mattress. The removal of air will prevent any sloshing sounds within the mattress.
- H. Place the cap and plug insert on the valve and secure. Push the valve flush with the rest of the mattress.
- I. Wipe up any and all spillage now, as it will not evaporate. Some people are fooled by believing spillage to be a leak.

If you do detect water on your mattress or in the liner, do not drain your mattress until you have located the source of the water.

Remember!

- 1. The primary cause of water within the liner is spillage during filling which may go unnoticed for months.
- 2. Oftentimes a loose or improperly tightened valve cap allows seepage. In addition, the washer that

goes inside the valve must be placed in the correct position and secured.

- 3. Occasional incidental tampering by members of the household frequently accounts for the appearance of water.

Therefore, prior to draining your mattress:

- A. Completely dry the mattress.
- B. Place a dry towel under the area.
- C. Check the area after 24 hours.

- D. If more water appears, locate and patch the leak with the patch kit provided.
- E. If you are unable to locate and patch the leak, drain your mattress and return it to your dealer.

In the event of a small puncture, the water mattress can be repaired with the enclosed vinyl repair kit.

DRAINING INSTRUCTIONS

- 1. Unplug waterbed heater.
- 2. Clear area below and around draining valve; fiber interiors can interfere with draining.
- 3. Drain mattress until most of the water has been drained. Then carefully roll the mattress like a toothpaste tube, starting from the end of the mattress opposite the drain valve. (If your mattress is a fiber mattress, be sure to grab fiber interior and vinyl and roll simultaneously) As you roll the mattress (lifting slightly to force the water towards the drain valve), place an object (with no sharp edges) in position to prevent the mattress from unrolling (see Figure 1). This step is very important for two reasons. One, it

insures that the interior material will remain centered inside your mattress. Two, it will force water down to the drain valve. The more water you remove, the lighter your mattress will be.

- 4. When the maximum amount of water has been drained, replace cap and plug on the valve.
- 5. Wrap the safety liner around the rolled mattress (to tie it) for removal to new location.
- 6. When re-installing the mattress, begin filling only after the mattress has been unrolled, unwrinkled, & centered in bed. Interior wave reduction material must lie flat (if your mattress is not a full motion mattress).
