How does the DogRook Bark Collar work?

The vibration bark collar prevents the dog’s barking through the humane application of the behavior-modifying tones and vibration stimulation.

The collar is easy to use and to test. It activates by the throat vibrations caused by your dog’s barking. A microprocessor inside the collar distinguishes your dog’s bark from other environmental noises and automatically delivers a behavior-modifying tone and vibration after each bark.

**Important Note:**
Please ensure that the collar is fitted correctly. If the collar is not fitted correctly it may activate randomly.

**Correct Position:**
1. It's not moving on your dog's neck;
2. You are able to put only 1 finger between the strap and the dog's neck.
Say "NO!" loud and clear every time the dog barks.
This will help the dog to make the connection between the impulse and the word "NO".

To get the best efficiency in preventing barking - support the work of the collar with your voice commands.
To charge the collar – pull away the rubber cap covering the charging socket and insert the cable. When the light is red it means that the collar needs to be charged. The charging process usually takes 2-4 hours. When the indicator has green light it means that the battery is fully charged and ready to work.

The +/- buttons are for adjusting the sensitivity level. The collar has 7 levels of sensitivity. Reduce the sensitivity of the collar if it responds to third-party noise or increase it if it does not detect your dog’s barking. The default level of sensitivity is 4.

**How to turn on the collar?**

- Press the «-» (Minus) button for 2 seconds to Turn ON the collar. The LED Indicator will light, indicating that the Sound and Vibrating functions are active.
- Hold the «-» (Minus) button for 2 seconds to Turn OFF the collar. The LED Indicator will turn off, indicating that the collar has been deactivated.
- Adjust the DogRook bark collar’s sensitivity by using the «+» (Plus) and «-» (Minus) buttons.
- Blow in the hole on the collar to test if it works. If it reacts – collar works.
1. Put the collar on the dog so that they can get used to it. Do not turn it on until the dog stops noticing it.

2. Turn the system on to begin training your dog.

3. You must say NO loud and clear every time the dog barks. This will help the dog to make the connection between the impulse and the word NO.

4. Your dog will soon learn the connection between the impulse and NO. And soon even when you are not around, he will understand the impulse as NO.
How to put the collar on the dog?

1. Make sure that the collar is charged. Green light indicates that the battery is full.

2. If you have a small dog, there will be excess strap.

3. Adjust the sensor sensitivity. Use +/- buttons to adjust sensors 8 levels of sensitivity.

4. Right way to put the collar on.

   - Place the collar too loose on the neck
   - Place it away from the vocal cord

   Ensure that no more than one finger can pass through.
Questions and answers

when and how often do i need to charge the collar?
We recommended that you charge the collar once a 1-2 week depending on the frequency of use.

why collar does not activate?
It is maybe 3 possible reason:
- When the indicator has Red light – You need charge the battery.
- The sensitivity level is set up too low – We recommended to increase the sensitivity level.
- The collar too loose - We recommended adjusted the strap so that one finger can fit comfortably between it and your dog’s neck.

why collar beep but not vibrate?
The charge is not enough and the collar does not sound properly or make constant noise instead of corrective sounds and vibration - Please charge the battery.

collar goes when my dog will not bark. why?
The sensitivity level is set up too high – Please reduce the sensitivity level.

why in the box we have 2 sets of prongs?
Collar has prongs of different lengths are needed to accommodate both long- and short-haired dogs to detecting the vibration from your dog’s throat when he barks.
