<https://www.amazon.com/dp/B076FMY11Q>

These silicone dish scrubbers are BPA and BPS free, so they are safe for both adults and children. The material of these dish scrubbers has passed the United States FDA food detection and the European Union LFGB food safety detection. These sponges are undeniably much more healthy and sanitary than traditional sponges!

The material itself is antibacterial in nature because, unlike regular sponges and cloths, it does not have pores, so basically there are no pores for the bacteria to inhabit on these silicone dish scrubbers.

It is also much easier to keep it clean and dry than regular sponges since it does not absorb water and does not "sour" like cloth or regular sponges. If you still want to wash it well since food particles can be left in between the little bushes, you can boil these, put them in the microwave for 2 minutes or put them in your dishwasher.

These silicone sponges are easily sanitized - unlike regular sponges that attract bacteria. Simply rinse the scrubber and clean with water. It is very easy to rinse all the food particles out.

It is simple to use, simple to clean, and simple to travel with! It also has a cut out at the top, so that you can hang the scrubber to dry.

These silicone antibacterial sponges are specially designed to be dish scrubbers, veggie scrubbers, skin scrubbers and can also be used to wash vehicles due to the non-scratching properties and gentle silicone bristles.

These silicone sponges can also be used as coasters or pot holders since they are double sided and heat resistant. These silicone sponges can also be used to clean makeup brushes!

***BPA is short for the chemical Bisphenol A, an industrial chemical that is used to make specific plastics and resins (examples are containers that store food and water) since the 1960s.

***BPS is short for the chemical Bisphenol S, another industrial chemical that is a common replacement for the chemical BPA. BPS is, however, found to be just as harmful as BPA.
