5 kV, 10 kV, 15 kV DC Insulation resistance testers

DESCRIPTION
Megger’s new range of DC insulation testers MIT515, MIT525, MIT1025, and MIT1525 are targeted at original equipment manufacturers and industrial companies. The top of the range MIT1525 performs insulation resistance tests up to 15 kV with a 30 TΩ maximum resistance and an accuracy of ±5 % from 1 MΩ up to 3 TΩ. The MIT515 offers IR, DAR, and PI functions but has no memory functionality. MIT525, MIT1025, and MIT1525 have a full suite of test modes as well as on-board memory and the ability to stream data/download data to a PC/laptop. Instrument productivity is a focus of the new MIT range which offers rapid charge batteries and operation from an AC source if the batteries are flat. Rapid charge batteries enable > 60 minutes testing after a 30 minute charge.

MIT515: 5 kV IRT with PI and DAR but no memory
MIT525: 5 kV IRT with all test modes including a ramp test plus advanced memory functions with recall to screen, RTC for time/date stamp of results and USB cable interface to PC/PowerDB
MIT1025: 10 kV IRT with all test modes including a ramp test plus advanced memory functions with recall to screen, RTC for time/date stamp of results and USB cable interface to PC/PowerDB
MIT1525: 15 kV IRT with all test modes including a ramp test plus advanced memory functions with recall to screen, RTC for time/date stamp of results and USB cable interface to PC/PowerDB

Safety rating is not compromised on the MIT range with all terminals safety rated to CAT IV 600 V to 3000 m (5 kV, 10 kV) or CAT IV 1000 V to 3000 m (15 kV). A range of 5 kV and 10 kV test leads are available plus dedicated 15 kV test leads which are double insulated with clips designed for 15 kV creepage paths. The 15 kV leads are supplied in a holdall. Suitably rated HV gloves and other personal protection equipment are required to be worn when testing.

The MIT range share dual case design which includes a tough outer case to protect the tester from knocks/drops and an inner fire retardant case. The IP rating is IP 65 case closed eliminating moisture and dust ingress.

An intuitive user interface ensures no lost time remembering how to use the tester. Simplicity of operation is achieved with two rotary switches and the large backlight display which enables multiple results to be displayed simultaneously. A graphical quick start guide is provided inside the lid to assist first time users.

Five preset voltage ranges are provided in insulation test mode, plus a user settable lock voltage range. Preconfigured diagnostic tests include Polarisation Index (PI), Dielectric Absorption Ratio (DAR), dielectric discharge (DD), Stepped Voltage (SV) and ramp test. Advanced memory storage includes time/date stamping of results, logging of data and recall of results to screen. A fully isolated USB interface is used for safe transfer of data to Megger’s asset management software; PowerDB Pro, Advanced and Lite packages.

Test leads are double insulated with clamps rated at 3 kV equivalent to 6 kV single insulation for the medium clip leadset and 5 kV equivalent to 10 kV single insulation for the large clip. The 15kV leadset is insulated to 15 kV.

Advanced memory storage includes time/date stamping of results, logging of data and recall of results to screen. A fully isolated USB
APPLICATION
The Insulation Resistance (IR) test is a quantitative test which indicates the effectiveness of a product's electrical insulation. Applications include cables, transformers, motors/generators, circuit breakers and bushings. Common insulation tests are the "spot test", a 1 minute IR test and a 10 minute Polarisation Index (PI) test, where PI is the ratio R10min / R1min and is temperature independent.

**TEST LEADS SUPPLIED**

The MIT515, MIT525, MIT1025 and the MIT1525 are all supplied with test leads that are compliant with the requirements of IEC61010-031:2008. The 5 kV models are supplied with one 3m lead-set with medium sized clips. The 10 kV models are supplied with two 3m lead-sets, one with medium sized clips and the other with large clips with insulation suited to 10 kV use and the 15 kV models supplied with a 3m lead-set, with large clips with insulation suited to 15 kV use.

These leads are designed based on Megger's extensive knowledge of insulation testing using the latest technology. The leads are in compliance with IEC61010-31:2008 which requires a fully insulated clip design.

**MEDIUM INSULATED TEST CLIP 3 M X 3 LEADSET - 5 kV AND 10 kV**

These test leads are supplied as standard on MIT515, MIT525 and the MIT1025.

These clips are designed for clamping on larger diameter test pieces but where space is at a premium.

The insulation is designed only to protect the user from the output of Megger 5 kV and 10 kV (set below 6 kV) insulation resistance testers. The clips cannot in any circumstance be relied on to protect the user from live ac systems above 600 V a.c., r.m.s. in an CAT IV environment.

**Cable insulation rating**: 12 kV dc (marked on cable)

The insulation is designed only to protect the user from the output of Megger 5 kV, 10 kV and 15 kV insulation resistance testers. The clips cannot in any circumstance be relied on to protect the user from live ac systems above 600 V a.c., r.m.s. in an CAT IV environment.

10 kV lead set
Cable insulation rating: 12 kV dc (marked on cable)
Cable type: flexible dual insulated silicon (inner insulation layer coloured white to highlight damage)

15 kV lead set
Cable insulation rating: 18 kV dc (marked on cable)
Cable type: flexible dual insulated silicon (inner insulation layer coloured white to highlight damage)

The design of the lead sets is intended to facilitate connection to a variety of de-energized systems for the purpose of making insulation resistance measurements. In all cases it is the responsibility of the user to employ safe working practices and verify that the system is safe before connection. Even isolated systems may exhibit significant capacitance which will become highly charged during the application of the insulation test. This charge can be lethal and connections, including the leads and clips, should never be touched during the test. The system must be safely discharged before touching connections.

DESIGNED FOR EVERYDAY USE
Test leads are a key component of any precision instrument and that safety, long life, and the ability to provide reliable connections to a variety of test pieces found in everyday applications are of the utmost importance. Megger design test leads for both safety and practical operation.

LOCKING HV INSULATED PLUGS/NON-REMOVABLE TEST CLIPS
All Megger 5 kV, 10 kV and 15 kV insulation testing test leads are fitted with unique locking HV plugs and non-removable test clips. This reduces the likelihood of a plug or clip inadvertently losing electrical connection and the capacitance of a long cable remaining lethally charged.

With the arrows on the plug finger guard horizontal on the instrument as shown to lock. Twist 90° to to unlock. In addition, for the same reason, the test clips are not removable from the test lead.

PRACTICAL INSULATION DESIGN
Moving jaw fingers maintain the clips touch proof safety when clip is closed but flex back to allow metal teeth of the clip to contact test piece unimpeded when in use.
PRACTICAL JAW DESIGN
Curved jaws allow reliable connection around test pieces and flat jaw tips provide excellent connection and gripping of individual wires.

OPTIONAL TEST LEADS

MEDIUM AND LARGE TEST CLIPS
Test leads above with medium and large size insulated clips are available supplied as an option in 5m, 8m, 10m and 15m lengths. These are listed in the ordering information panel at the end of this data sheet. These test leads may also be supplied in non-standard lengths to suit a particular application/requirement. Please contact Megger for a quotation, minimum order quantities may apply.

Versions available for all MIT models

COMPACT TEST CLIP LEADS
These clips are designed for clamping on test pieces where access is limited. There is no insulation on these clips.

Extreme care must be taken to avoid electric shock when connecting/disconnecting due to the bare metallic clips.

Cable insulation rating: 12 kV dc
Cable type: flexible dual insulated silicon (inner insulation layer coloured white to highlight damage)

Fits: MIT515, MIT525 and MIT1025

COMPACT TEST CLIP WITH 5 OR 10 KV SCREENED CABLE
The clips are designed for clamping on test pieces where access is limited. There is no insulation on these clips. Extreme care must be taken to avoid electric shock when connecting/disconnecting due to the bare metallic clips.

The screened test lead set consists of:

- A black/negative test lead that has been screened.
- A red/positive test lead that is not screened.

Cable insulation rating: 5 kV or 10 kV dc
Cable type: flexible screened PVC

Note: Screened test leads are an important accessory for those working in high noise environments, and/or locations where test lead leakage could be a problem.

Fits: MIT515, MIT525 and MIT1025

Large Test Clip with 15 kV Screened Cable
Relative motion between unshielded long leads for a D.C. test causes a variation in capacitance between them. This in turn causes very low frequency currents to flow, creating interference with the D.C. being measured. In addition induced current from nearby cables or radiated noise from corona around HV bushings can interfere with measurements causing unstable readings. This can be greatly reduced by using a screened lead set.

The screened test lead set consists of:

- A black/negative test lead that has been screened.
- A red/positive test lead that is not screened.

Cable insulation rating: 15 kV dc
Cable type: flexible screened PVC

Note: Screened test leads are an important accessory for those working in high noise environments, and/or locations where test lead leakage could be a problem.

Fits: MIT1525

CONTROL CIRCUIT TEST LEAD SETS
This probe and clip leadset is designed for testing low voltage circuits with test voltages up to 1 kV.

The insulation is designed only to protect the user from the output of Megger 5 kV, 10 kV and 15 kV insulation resistance testers set to a maximum output voltage of 1 kV. Do not use this leadset at voltages above 1 kV.

Cable insulation rating: 1 kV dc

FUSED TEST PROBE AND CLIP LEAD SET
This fused probe and clip leadset is designed for testing low voltage circuits with test voltages up to 1 kV. The leadset is GS38 compliant, fitted with FF500mA 50 kA fuses, which allows voltage measurements to be made in safety when using the user selectable voltage measuring range on the MIT515, MIT525, MIT1025 and MIT1525 instruments.

The insulation is designed only to protect the user from the output of Megger 5 kV and 10 kV insulation resistance testers set to a maximum output voltage of 1 kV. Do not use this leadset at voltages above 1 kV.

Cable insulation rating: 1 kV
