What is a regulated dangerous good?

A product is considered regulated if any of its components are classified as dangerous goods or substances or are otherwise regulated by one of the official organizations of transport (DOT, IATA, IMDG, ADR) or of product handling and storage (CLP, GHS).

For more information on dangerous goods, please visit the following help pages:

	Aquatic toxicity, long-term damage to the ecosystem		

Additional information on dangerous goods

Batteries

Lithium batteries are classified as hazmat under class 9 of all transportation regulations. For shipping and labelling reasons we require information as to whether or not your product contains a lithium battery and, if so, how it is packed.

Lithium battery packaging definition

- *In equipment*: If the battery is assembled in the item
- *With equipment*: If the battery is packed separately with the device it is meant to power
- *Standalone*: If the product is a battery sold alone or with items it is not meant to power

Additional comments:

- **Lithium-ion batteries** are **rechargeable**
- **Lithium metal batteries** are **not rechargeable**
