**Product code operation instructions**

**Special note:**

The use of the keyboard light is not bright, only just installed on the battery the indicator light will be red, after 1 second off, then not lit up. The keyboard and mouse share a receiver, installed in the bottom of the mouse.
**Keyboard code**

- Receiver not to plug into the computer’s USB port at first, put next to spare.
- After the batteries are installed on the keyboard, press and hold the two keys of "ESC" and "=" (above the picture), release them at the same time in 5 seconds, then the LED will light red. 10 seconds after lighting red, put the receiver into the USB port, the keyboard code success.
- If the code is not successful, you can repeat the above operations.

**Mouse code**

The operation steps of the mouse are similar to the keyboard code. After the batteries are put on, press the left, middle and right buttons simultaneously. After 5 seconds, all the lights will be released but lighting all the time on the back of the mouse. Bright indication, in 10 seconds put the receiver into the USB port, the mouse on the code successfully.

**Common problems in the coding**

1. Battery power is not enough: Coding is to require higher power, you need to use some good batteries or new batteries.
2. The indicator light is not displayed correctly: Press the key again to confirm, until the indicator light is normal.
3. USB drive is not installed: Replace the USB port, or restart the computer and then re-operation of the code.
4. The keyboard / mouse is too far from the paired receiver: Try to approach the receiver at a distance of 10 cm.

**Various types of certificates from Manufacturers**
