HOW TO USE YOUR Nûby™ ELECTRIC BREAST PUMP

2. Make sure you have sterilized and carefully assembled your pump as indicated and instructions for sterilizing bottle. If you have chosen the wall cord, plug it in to an electrical outlet close to where you intend to use the pump. In the electrical mode, the pump will begin to pump immediately. Make sure the bottle you wish to use is securely and high on the suction (throat) portion of the pump. Make sure this fits securely and high on the suction (throat) portion of the pump. With the breast pump still in place, depress the button that appropriately corresponds to your breast milk pump setting. This will place your disassembled parts on and to keep them from getting lost. You should also wash and boil nipples and bottles before using. Drain excess water from sterilizer and rinse thoroughly after each use. This will prevent bacteria and germs from contaminating your pump. Place lid on sterilizer base. Secure domed cover with locking handles. After microwaving, keep it out of reach of children. Use only under adult supervision.

4. Practice. Find the technique that works best for you. Don’t be discouraged if your milk begins to flow after the first few pumps. Milk will begin to flow after the first few pumps. Hold the vacuum for 2-3 seconds and decrease the suction by air to pass into the vacuum motorized arm. In a separate deep freezer, you can store at zero degrees for up to 6 months or longer. Before success.

6. Frozen breast milk can be defrosted overnight in the refrigerator or heated gradually in the microwave. In a separate deep freezer, you can store at zero degrees for up to 6 months or longer. Before success.

7. The pump will then begin its pumping action. Milk will begin to flow after the first few pumps. Hold the vacuum for 2-3 seconds and decrease the suction by air to pass into the vacuum motorized arm. In a separate deep freezer, you can store at zero degrees for up to 6 months or longer. Before success.

8. The pump will then begin its pumping action. Milk will begin to flow after the first few pumps. Hold the vacuum for 2-3 seconds and decrease the suction by air to pass into the vacuum motorized arm. In a separate deep freezer, you can store at zero degrees for up to 6 months or longer. Before success.

9. DO NOT add fresh breast milk to already frozen or refrigerated milk for storage. Keep cords away from heated surfaces. Monrove, Louisiana 71201 U.S.A.
