FAQ:
1. Do I need to set it up on all my devices?
   - No, just set it up one time and all devices are able to connect with it.
2. How to reboot if I did wrong during setup or change a new router?
   - Just reset it to factory mode by sticking to the reset button for 10-15s.
3. Why it asks me to enter IP address for the first time setup?
   - It’s not under setup mode. Please reset to factory mode.
4. Does it matter if WiFi Repeater is an unsecured network before setting up?
   - This WiFi is only used for setup not for internet. Once you done the setup, it turns into a secure network.
5. Why can’t access the IP address?
   - Ensure you connect with WiFi name called "WiFi Repeater". Once done the setup, the IP cannot be opened unless reset.
6. Why is there no connection after setting up?
   - You typed a wrong password during setting up. Please reset it and reconfigure it.
7. How to make it work better?
   - Plug it in a signal strong area and keep it away from microwave and electronic products.
8. If asks 8 digit PIN code when connect to the WiFi repeater, please click Cancel.
9. For more support, please contact us via Amazon Message or support@signal.cn
