Great design & function

We were looking for a brushed nickel design to match an existing Moen faucet and this collection did the job perfectly. The quality of materials is excellent as is the mounting method. The one thing we love about the TP holder is the swing up design of the arm rather than the typical spring loaded type - which is at times hard to deal with. So far we have outfitted 2 bathrooms with this collection and the swing up arm design and we love them.

✔ Yes, I recommend this product.

Very pleased with one minor complaint

I bought this unit as a direct replacement for a 27 year old Broan fan. The designs were basically the same so it fit in the same sheet rock cut out the old unit resided in. Changing to the new one was fairly straight forward. It took a few trips to the attic to secure the hangers and check the vent connection.

In operation this new unit is much quieter than the old. The light is about the same (not terribly bright with a 60W bulb). My only complaint is that the design of the new plastic cover has vent openings that allow one to see into the innards of the fan and light - not a real pretty sight. If the designers had taken care to cover this I would give the fan/light 5 stars.

璨 Yes, I recommend this product.

Great basic fan/light

Just put up 2 of these and I am pleased. It is not fancy but looks good and is quiet. I like the bright white color, it looks clean against the ceiling. I only wish it had two light bulbs instead of 1, that is why it got 4 stars instead of 5.

⭐⭐⭐⭐⭐  Excellent replacement
I replaced a 1970's vintage model 696 with the item purchased. Much quieter, increased ventilation, updated grille design and improved fan. The old fan was aluminum, fatigued with age and wouldn't stay balanced, causing lots of vibration. The new one has the same dimensions as the old, so installation was easy. Good price and fast free shipping!

Θ Yes, I recommend this product.

⭐⭐⭐⭐⭐  Great replacement
This was a perfect replacement for the old 2 heat bulb/fan unit since it is about the same size housing. Plus the fan is much better quality and more CFM. More energy efficient also.

Θ Yes, I recommend this product.

broan fan

this is a great item and the price couldn't be beat plus with the bing cash back, my big box store's home depot and lowes couldn't touch this price, great service and fast shipping, thanks

.Euler, I recommend this product.

Not Good!

These units were installed in three of my bathrooms and all three had to be replaced. One of them (in the master bath) needs to be replaced again. This unit is quiet because it does not work. My bathroom walls are wet and the entire bathroom is steamy. Why did I use the same product you might ask? The builder uses it and replaces with the same. Perhaps the next one will work.

.Euler, I do not recommend this product.

Mr. Me

I ordered this unit, because it was the exact size of the 70 cfm unit I replaced, so installation was very easy. I did not want to cut out or fix any ceiling holes. The total time to remove and install was about 1.5 hours. This unit is a lot more quiet than the 70 cfm that I did replace.

Yes, I recommend this product.

Just bought the 696, opened the box and looked at the instructions. I expected to see the size of the cutout in the instructions but it is not. What the heck is it????
Thank you for your question on the Broan 696. The cut of the Broan 696 is the outer measurement of the housing 15" x 8 3/4". If you have further questions please contact Technical Support directly at 800-637-1453.

JMac4506 · 3 months ago
Hello! I purchased the model 696 this past spring. I just installed it and I can't find a few of the parts. (Yes, I took it out of the box when I started the project) I seem to have lost or am missing a couple parts. How can I buy these parts?

BroanCustomerService · 3 months ago
Thank you for your question on the Broan 696 bath fan. I'm sorry to hear you have parts missing on your Broan 696. Please call Customer service directly at 800-558-1711 so we can get those parts on order for you.

Dave38 · 7 months ago
Broan 696. Type A19 bulb does not fit in unit. It hits nut holding reflector in place. What am I doing wrong?

BroanCustomerService · 7 months ago
Thank you for your question on the Broan 696. The bulb is very close to the acorn nut
when assembled. Look at socket to see if the metal holder may have gotten bent in shipping. If you still cannot get bulb assembled please contact Technical Support directly at 800-637-1453.

Can I replace fan guts for 696 to larger CFM with out swamping whole unit

BroanCustomerService · a year ago

Thank you for your question on the Broan 696. Sorry, we do not offer a larger CFM for the Broan 696.

Anonymous · 3 years ago

I'm replacing a Model 655.

Do I need attic access. Or can I do all work from inside the bathroom.

BroanCustomerService · 3 years ago

Thank you for your question on the model 655 exhaust fan/heater/light. The 655 and the 696 both need to be installed with attic or crawl space access. If you install these units from below, you would need to remove more of the ceiling dry wall than would normally be necessary and patch the ceiling after the installation is done. Please contact the
I have a 696 unit that is not venting the steam. I checked the motor and wheel, damper, and ducting- ALL working fine. The steam is collecting on the unit and condensing which is dripping out of the unit onto the floor, and also tripping the GFI. The bathroom is a 6x8x8 room.

Anonymous · 4 years ago

Not venting

Thank you for your question on the Broan 696. If your duct work and damper are free and clear of obstructions, we would ask how the duct run is installed. Is there an immediate bend or elbow right off the unit? This could block the air flow and create back pressure. The duct work should be as short and straight as possible using a 4" round duct size. If this is the case, then you may not have enough make up air entering the room and the fan is suffocating. You have a larger fan than what is required for your room size so you have to allow fresh air to enter the room to replace the air exhausted. For more assistance, please contact Technical Support at 800-637-1453.

I have model 696, and while showering the whole unit, light and fan, just shut off. Fuse did not blow. Any advise?
BroanCustomerService · 4 years ago

Thank you for your question on the model 696 exhaust fan/light. Since the wiring for the light and fan are separate from each other, the problem would normally be a power supply issue. Please contact the Technical Service Department at 800-637-1453 for assistance.

Anonymous · 4 years ago

how close to a tub shower can the 696 be installed?

BroanCustomerService · 4 years ago

Thank you for your question on the model 696 exhaust fan/light. We would only require that it be outside the tub or shower footprint.

Anonymous · 5 years ago

What is best way to clean this unit? Full of dust now.....

BroanCustomerService · 5 years ago

In order to clean the model 696, the grille, lens, bulb and reflector should be removed. This will expose the fan and heat units. In most cases, a gentle cleaning, with a vacuum
will be adequate. If this is not enough, both the fan and heat assemblies can be removed and taken down from the unit. Please see the detailed cleaning instructions for both, in the installation instructions, which are available on our website.

My fan is making loud noise, can the fan be replaced in this model?

BroanCustomerService · 6 years ago
Thank you for your question on the 696 exhaust fan/light. There is a fan assembly available for the 696. It is part number S97017714 and you can get it through our Customer Service Department at 800-558-1711.
