

Thank you for shopping with iPower!

Troubleshooting steps:

If the bulb won't light up. Check for following possibilities:

1. The lamp or fixture wiring might be faulty
2. The cord to the lamp could be unplugged, or the power to the light could be shut off at the circuit breaker.
3. The bulb may be loose in the socket--check to make sure it is tight
4. The outlet receptacle the lamp is plugged into may be bad
5. The switch feeding the light may be defective

If the light fixture frequently trips the circuit breaker or fuse each time a light fixture is switched on.

Check for following possibilities:

1. You may have a defective plug
2. The light socket may be defective
3. There may be a short circuit in the cord or wiring feeding the light

Sincerely,
