This is a Listed appliance. The following Important Safeguards are recommended by most portable appliance manufacturers.

IMPORTANT SAFEGUARDS

To reduce the risk of personal injury or property damage, basic safety precautions should always be followed, including the following:

1. Read all instructions. Improper use may result in bodily injury or property damage.
2. Always check the air vent/cover lock to be sure it moves freely before use.
3. Do not fill pressure canner over ⅔ full when using for pressure cooking. For soup, rice, and dried vegetables which expand during cooking, do not fill canner over ½ full. See food preparation instructions.
4. Do not pressure cook applesauce, cranberries, rhubarb, pearl barley, cereals, pastas, grains, split peas, or soup mixes containing dried vegetables. These foods tend to foam, froth, and sputter and may block the vent pipe, overpressure plug, and air vent/cover lock.

6. This appliance cooks under pressure. Improper use may result in scalding injury. Make sure pressure canner is properly closed before operating; cover handles must be directly above the body handles. See “How To Use Instructions.”
7. Do not place the pressure canner or attempt to pressure cook in a heated oven.
8. Caution: Do not use pressure canner on an outdoor LP gas burner over 12,000 BTUs.
9. Extreme caution must be used when moving a pressure canner containing hot liquids. Do not touch hot surfaces. Use handles or knobs.
10. Do not open canner until internal pressure has been completely reduced, air vent/cover lock has dropped, and no steam escapes when the pressure regulator is removed. See “How To Use Instructions.”
11. Caution: To ensure safe operation and satisfactory performance, replace the overpressure plug every time you replace the sealing ring or sooner if it becomes hard, deformed, cracked, worn, or pitted. It is recommended that the sealing ring and overpressure plug be replaced at least every three years.
12. When normal operating pressure is reached, gradually lower the heat to maintain the pressure. If the pressure regulator is allowed to rock vigorously excess steam will escape, liquid will be evaporated, the canner may go dry, and food may scorch.
13. Close supervision is necessary when the pressure canner is used near children. It is not recommended that children use the pressure canner.
14. Do not use this pressure canner for other than intended use.
15. Do not use this pressure canner for pressure frying with oil.

SAVE THESE INSTRUCTIONS
THIS PRODUCT IS FOR HOUSEHOLD USE ONLY.

Getting Acquainted

Your canner is a special, large capacity pressure vessel designed for home canning a wide variety of fruits, vegetables, meats, and poultry. The canner may also be used to fast cook many of your favorite foods in larger quantities than can be prepared in a conventional size pressure cooker.

The canner uses pressure to achieve the high temperatures required for safely processing foods while canning. The United States Department of Agriculture, Washington, D.C., recommends the Pressure Canner as the only safe method for canning low-acid foods — vegetables, meats, and poultry.

The canner will also cook many foods in one-third to one-tenth the time required by conventional methods. Pressure cooking preserves flavor and nutrients and tenderizes tougher cuts of meat.

It is necessary to follow a few special rules in using and caring for your Pressure Canner. Become familiar with the various parts as shown in the diagram on page 2 and read the “How To Use” sections beginning on Pages 3, 4, 13, and 15, before using for the first time.

REPLACEMENT PARTS

PRESTO® Canner parts are available at most hardware and appliance stores or see parts information on page 23.

When ordering parts, please specify the seven digit model number found stamped on the side of the canner body.
1. PRESSURE DIAL GAUGE

The pressure dial gauge registers pressure in both pounds (outer scale) and metric measure (inner scale). The pointer moves around the dial indicating the pressure within the unit.

The dial gauge is a delicate instrument which must be handled with care. Before first use, it will be necessary to assemble the dial gauge properly and attach it to the canner cover (see page 3). The pressure dial gauge needs to be checked for accuracy prior to each canning season and if any of the following conditions exist: cover has been submerged in water or dropped, gauge glass is broken or has fallen out, parts are rusty, pointer is not in the “0” block, or if you believe the gauge may not be accurate. The gauge can usually be checked at your local county extension office. If you are unable to have your dial gauge checked locally, carefully remove and package the gauge and send it to the Presto Consumer Service Department. See Service Information on page 23. An accurate gauge is necessary to help prevent food spoilage and possible food poisoning.

2. PRESSURE REGULATOR

The pressure regulator is a solid one-piece unit. Pressure readings on the pressure canner are registered only on the pressure gauge (see above) and can be controlled and maintained by adjusting heat settings.

3. VENT PIPE

The pressure regulator fits over the vent pipe and allows excess pressure to be released.

4. AIR VENT/COVER LOCK

The air vent/cover lock automatically "vents" or exhausts air from the canner and acts as a visual indication of pressure in the canner. The small gasket must be in place for the air vent/cover lock to seal completely.

5. LOCKING BRACKET

The locking bracket on the inside of the canner body engages with the air vent/cover lock to prevent the cover from being opened when there is pressure in the unit.

6. SEALING RING

The sealing ring fits into the canner cover and forms a pressure-tight seal between the cover and body during canning and cooking.

7. OVERPRESSURE PLUG

The overpressure plug is located in the canner cover. It will automatically pop out and release steam in case the vent pipe becomes blocked and/or clogged and pressure cannot be released normally.

8. CANNING-COOKING RACK

The canning-cooking rack is placed in the bottom of the canner to hold jars off the bottom of the unit while canning. When cooking, the rack is used for steaming foods. It can also be used to hold foods such as vegetables out of the cooking liquid which allows several foods to be cooked at the same time without an intermingling of flavors. When it is desirable to blend flavors, do not use the canning-cooking rack. The canning-cooking rack must always be used when canning.

Before Using Canner for the First Time

1. Remove the air vent/cover lock from the canner cover. The cup portion of the air vent/cover lock, on the inside of the cover, unscrews from the pin (Fig. A).
2. Remove the sealing ring by simply pulling it from the sealing ring groove.
3. Remove the overpressure plug by pushing it out of its opening from the top of the cover.
4. Wash the cover and body with hot, sudsy water. Do not submerge the cover in water or let the gauge come in contact with any liquid. The inside mechanism of the gauge may be damaged if it is submerged or if water is allowed to run over it. Scrub the sealing ring groove to remove the manufacturing oils.
5. Reinsert the air vent/cover lock making sure the small gasket is in place as shown (Fig. B).
6. Reinsert the overpressure plug by pushing the domed side of the plug into the opening from the underside of the cover, until the bottom edge is fully and evenly seated against the underside of the cover (Fig. C). When the overpressure plug is properly installed, the word (TOP) will be visible on the overpressure plug when viewing the outside of the cover.

7. Replace the sealing ring in the sealing ring groove, making certain to fit the ring under the stop tab located on the inside rim of the cover (Fig. D).

8. The sealing ring is prelubricated; therefore, do not apply cooking oil to it. If necessary, to help make the cover easier to open and close, a very light coating of cooking oil may be applied to the underside of the body lugs (Fig. E). **IMPORTANT: Never oil the sealing ring.** Cooking oil will swell and soften the sealing ring, reducing the usable life and require frequent replacement. The cover should open and close easily when following the instructions in the next column (Fig. J).

9. Attach the dial gauge to the canner cover. To do this, remove the nut and metal washer from the threaded end of the dial gauge, leaving the rubber washer in place. From the top of the cover, insert threaded end of gauge through the hole in the center of the cover, until metal base rests on cover. While holding the gauge in place, carefully turn cover over and place metal washer, then nut, on threaded end of gauge and tighten. (Fig. F).

**How to Use Your Canner**

**IMPORTANT: Read carefully. Do not attempt to use your Pressure Canner before reading these instructions.**

- Before using your canner for the first time, clean according to the instructions on page 2.

- Be sure the vent pipe is open before each use by holding the cover up to the light and looking through the vent pipe (Fig. G). If the vent pipe is blocked, excess pressure cannot be released through it. Pressure may then build to unsafe levels. Pressure will continue to build until the overpressure plug is forced out of its cover opening. Therefore, clean the vent pipe with a small brush or pipe cleaner if it is blocked (Fig. H).

- The correct pressure for canning and cooking is indicated by the pressure dial gauge (Fig. I). Pressure is indicated on the gauge which registers the pressure inside the unit at all times. The pointer will move across the dial as pressure is developed or reduced within the canner. The pressure regulator is designed to rock only at 15 pounds pressure.

- Do not strike the rim of the canner body with any cooking utensil as this will cause nicks which may damage the rim and allow steam to escape.

- Use the canner on a level burner and range only. Use on a tilted burner or range may interfere with the operation of the pressure regulator.

- Pouring water into a dry overheated canner may crack the metal.

- The canner has been designed so the cover will go on in only one position and rotate in only the directions indicated for closing and opening. Press down on the cover handles to compress the sealing ring and make the cover easier to close. The cover has the words **CLOSE V OPEN** embossed on the top surface near a cover handle. Align the “V” on the cover with the mark on the body handle for proper cover and body alignment. Turn the cover in the direction indicated to close until the cover handles are centered directly above body handles. Do not rotate cover beyond this point (Fig. J).

When the cover is rotated to the closed position, the air vent/cover lock passes under the locking bracket. When the handles are aligned, one over the other, the pressure regulator is placed on the vent pipe, and heat is applied, pressure will begin to build within the canner. At this point, the air vent/cover lock lifts and locks the unit. The cover will remain locked as long as there is pressure in the canner. When pressure is completely reduced, the air vent/cover lock drops allowing the canner to be opened (Fig. K, next page).
spoilage cycle so food can be preserved safely. Molds, yeasts, and enzymes are destroyed at temperatures below 212°F; the temperature at which water boils (except in mountainous regions). Therefore, boiling water processing is sufficient to destroy those agents.

Bacteria, however, are not as easily destroyed. The bacteria, Clostridium botulinum produces a spore that makes a poisonous toxin which causes botulism. This spore is not destroyed at 212°F. In addition, the bacteria thrive on low-acids in the absence of air. For a safe food product, low-acid foods need to be processed at 240° or higher, temperatures only achieved with a pressure canner.

In pressure canning, some of the water in the pressure canner is converted to steam, which creates pressure within the canner. As pressure increases, temperature increases, 5 pounds pressure—228°F, 10 pounds pressure—240°F, 15 pounds pressure—250°F. This pressurized heat destroys the potentially harmful bacterial spores. As the jars cool, a vacuum is formed, sealing the food within and preventing any new microorganisms from entering and spoiling the food.

As a safeguard against using canned foods which may be affected with spoilage that is not readily detected, pour all low-acid foods (meats and vegetables) into a saucepan and boil 10 to 15 minutes before tasting or using.

Many times odors that cannot be detected in the cold product will become evident by these methods. If, after boiling, food does not smell or look right, discard it without tasting.

**MASON JARS:** While there are many styles and shapes of glass jars on the market, only Mason jars are recommended for home canning. Mason jars are available in ½ pint, pint, and quart capacities with threads on which a cap may be screwed. See the chart below for the jar capacity of your canner. Additional information may be obtained from the manufacturers of Mason Jars.

**CLOSURES FOR MASON JARS:** The two-piece metal cap consists of a flat metal lid held in place with a screw band. A rubber compound on the underside of the lid forms a seal during processing. Follow the closure manufacturer’s directions for using the two-piece cap and for testing for a proper seal. If the closure has not sealed, completely reprocess or use the food immediately. Refer to the closure manufacturer’s directions for additional information.

Please note: To double deck pint and half pint jars, see page 13.

**How to Pressure Can Foods**

**IMPORTANT:** Read carefully. Do not attempt to use your canner before reading these instructions.

Follow these step-by-step instructions for pressure canning in your canner. Prepare food according to the directions in
specific recipe.

1. The first step in pressure canning is to assemble the canning equipment. Be sure your canner is thoroughly cleaned and working properly. Before each canning season, check the pressure gauge for accuracy (see page 6, step 9). Also check the sealing ring, overpressure plug, and the rubber gasket of the air vent/cover lock. Replace these parts when they become hard, deformed, cracked, worn, pitted, or unusually soft (see page 7, step 11).

2. Check Mason jars for nicks, cracks, and sharp edges. Check bands for dents or rust. Use only jars, lids, and bands in perfect condition so an airtight seal may be obtained.

Wash and rinse jars, lids, and bands. Pour hot water into jars and set aside until needed. Follow closure manufacturer’s directions for bands and lids.

3. Select fresh firm food. Sort food according to size. Clean food thoroughly. Prepare according to recipe. Fill hot Mason jars promptly with food and liquid to recommended level. Allow ½ inch head space for fruits. ALL vegetables and meats require 1 inch head space due to expansion during processing.

Work out air bubbles with a clean nonmetallic spatula. Wipe sealing edge clean with a damp cloth.

Adjust caps according to closure manufacturer’s directions.

4. Place three-quarts of boiling water, canning rack, and jars in canner. To prevent water stains on jars, add 2 tablespoons white vinegar to water in canner. Always use canning rack. Jars may break if set directly on bottom of canner.

5. Look through the vent pipe to be certain it is open before placing cover on canner. To clean the vent pipe, draw a pipe cleaner or small brush through the opening.

6. Place cover on canner, aligning the “V” on the cover with the mark on the body handle and lock securely by turning in the direction indicated to close (clockwise). Cover handles must be centered over body handles. Do not force beyond this position.

7. Exhaust air from the canner and jars by adjusting heat to a relatively high setting to obtain a free flow of steam from the vent pipe. Consult the instruction book which accompanied your range for recommended heat setting. Reduce heat to maintain a moderate steam flow. Allow steam to flow for 7 to 10 minutes when canning.

8. Place pressure regulator on vent pipe. Set burner at a relatively high heat setting, on most range burners, and heat canner until pressure dial gauge registers desired pressure.

9. Processing time begins when pressure gauge registers the correct pressure. Adjust heat to maintain correct pounds pressure on the pressure gauge.

10. At end of processing time, turn burner to “OFF” or remove canner from heat source. Let pressure drop of its own accord, do not quick-cool. Pressure is completely reduced when the air vent/cover lock and overpressure plug have dropped and no steam escapes when the pressure regulator is tilted. Do not use the pressure dial gauge as an indicator for when pressure is completely reduced. Attempting to speed the cooling of the canner by laying wet cloths on the cover, placing the canner in water, or setting the canner in a draft or on a cold surface is not recommended. If the pressure in the canner is reduced more rapidly than the pressure in the jars, the jars may break.

11. When pressure has been completely reduced, remove pressure regulator from vent pipe and let canner cool for 10 minutes. Do not remove the pressure regulator until pressure is completely reduced and the air vent/cover lock has dropped. Always remove pressure regulator before opening the cover.
12. To remove cover, turn counter-clockwise until cover hits stop. Cover handles will be beyond the body handles. If cover seems to stick or is hard to turn, do not force it open. Sticking may indicate that there is still pressure inside the canner. If in doubt about pressure being completely reduced, let the canner stand until cool before removing the cover.

13. Lift canner cover toward you to keep steam away from you when opening.

14. Remove jars from canner. Set jars apart on board or cloth away from draft to cool. When jars are cold, test seal, remove bands, wipe jars, label, date, and store in a cool, dry place.

**Care and Maintenance**

1. The outside surface may be kept bright and shiny by cleaning with a good silver polish or simply by washing with soap and water. Iron and various minerals in water and foods may darken the inside of the canner but this discoloration will in no way affect food cooked. These stains may be removed by using a solution of water and cream of tartar. For each quart of water, use one tablespoon cream of tartar. Pour enough solution into the canner to cover the discoloration (do not fill over 2/3 full), then close cover securely. Place regulator on vent pipe and heat until 15 pounds pressure is reached. Remove canner from heat; allow canner to stand two to three hours. Remove regulator, open canner, and empty contents. Scour thoroughly with a soap impregnated steel wool cleaning pad; wash, rinse, and dry. Due to the acidic nature of the water supply in some areas, deterioration of the interior surface of the canner body may occur. To minimize this effect, thoroughly scour the inside of the canner body with an abrasive cleanser at least once a year.

2. Each time the canner is washed, remove the sealing ring and wash in warm, sudsy water, rinse, dry, and replace in cover.

3. The air vent/cover lock may be removed for occasional cleaning or for replacing the small gasket (see page 3). Wash all parts in warm, sudsy water. Use a soft cloth or small nylon brush to clean the cover hole. The small gasket must be in place when reassembling the air vent/cover lock.

4. The overpressure plug can be removed for cleaning by pushing it out of its opening from the top of the cover. After cleaning, reinsert the plug by pushing the domed side of the plug into the opening from the underside of the cover, until the bottom edge is fully and evenly seated against the underside of the cover. When the overpressure plug is properly installed, the word (TOP) will be visible on the overpressure plug when viewing the outside of the cover. The indented portion of the overpressure plug is visible when the underside of the cover is viewed.

If the overpressure plug is ever forced out of its cover opening due to excess pressure while cooking or canning, it is important to call the Consumer Services Department at 1-800-877-0441. **Do not attempt to replace the overpressure plug.**

5. When your Pressure Canner is not in use, invert the cover on the canner body and store in a dry place. Storing the canner with the cover locked on may cause unpleasant odors and may deform the sealing ring.

6. **To ensure safe operation and satisfactory performance,** replace the overpressure plug every time you replace the sealing ring or sooner if it becomes hard, deformed, cracked, worn, or pitted. Replace the sealing ring and overpressure plug at least every three years. Failure to follow these instructions could result in bodily injury or property damage.

7. If the canner body or cover handles become loose, tighten with a screwdriver.

8. If leakage of moisture or steam develops while using your canner, check the following possible causes:
   - The formation of a small amount of moisture under the pressure regulator is normal when cooking or canning first begins. This condensation is a result of the temperature of the pressure regulator being lower than the rest of the canner. If excess condensation continues, the vent pipe may be loose and should be tightened with an adjustable wrench.
   - Leakage between the cover and body is usually caused by shrinkage of the sealing ring after prolonged use. Replace the sealing ring and overpressure plug.
   - A slight amount of leakage around the air vent/cover lock is normal when canning or cooking first begins. If leakage continues, the cover handles may not be fully aligned with the body handles and, therefore, the cover lock cannot engage (see page 4). Clean the air vent/cover lock occasionally to assure that it operates correctly (see page 2).
   - A small amount of steam or moisture may be visible around the overpressure plug as canning or cooking begins. This will stop when the overpressure plug seals. If leakage continues, clean or replace the overpressure plug (see step 4).

Do not operate your Pressure Canner with continual leakage. If the preceding steps do not correct the problem, return the entire unit to the Presto Factory Service Department (see page 23).

9. The dial gauge is a delicate instrument which must be
handled with care. The pressure dial gauge needs to be checked for accuracy prior to each canning season and if any of the following conditions exist: cover has been submerged in water or dropped, gauge glass is broken or has fallen out, parts are rusty, pointer is not in the “0” block, or if you believe the gauge may not be accurate. The gauge can usually be checked at your local county extension office. If you are unable to have your dial gauge checked locally, carefully remove the gauge and send it to the Presto Consumer Service Department. See Service Information on page 23. An accurate gauge is necessary to help prevent food spoilage and possible food poisoning.

10. If the Pressure Canner becomes difficult to open or close and the sealing ring has expanded, replace the sealing ring.

11. IMPORTANT: The sealing ring, overpressure plug, and rubber gasket of the air vent/cover lock may shrink, become hard, unusually soft, deformed, cracked, worn, or pitted with normal use. Cooking oil and/or exposure to high heat, such as a warm burner or oven top, will cause these parts to deteriorate rapidly. When this happens, replace the sealing ring, overpressure plug, and small rubber gasket of the air vent/cover lock. Replace the sealing ring and overpressure plug at least every three years.

Before inserting a new sealing ring, clean the sealing ring groove with a brush. To insure safe operation of your pressure canner, it is recommended that the overpressure plug be replaced whenever the sealing ring is replaced.

Any maintenance required for this product, other than normal household care and cleaning, should be performed by the Presto Factory Service Department (see page 23).

Canning Fruits and Tomatoes

Foods high in acidity (fruits and tomatoes) may be processed using pressure canning or boiling water canning. The pressure processing method for fruits and tomatoes gives a heat treatment equivalent to the much longer processing time required with the boiling water canning method.

Select firm, fully-ripened but not soft fruit or tomatoes. Do not can overripe foods. Some fruits tend to darken while they are being prepared. To prevent the darkening, place fruit in an ascorbic acid solution (1 teaspoon ascorbic acid to 1 gallon water) or use ascorbic acid or citric acid mixtures according to package instructions.

Although fruit has better color, shape, and flavor when it is canned with sugar, it may be canned unsweetened if desired. Sugar is used for flavor. It is not used in a high enough concentration to act as a preservative.

White sugar is preferable to brown sugar for canning. Light corn syrup or honey may be used to replace up to one-half the sugar.

If you wish to use sugar substitutes, follow package instructions.

The amount of sugar desirable to use in preparing syrups will depend upon the tartness of the fruit and on family preference. It should be remembered that fruit, when heated, releases some of its juices which will dilute the syrup in proportion to the juiciness of the fruit.

SYRUPS FOR CANNING FRUITS

<table>
<thead>
<tr>

<td>6½ cups</td>
</tr>
</tbody>
</table>

Heat sugar with water or juice until sugar is dissolved. Add fruit and cook until heated through. Pack fruit into clean Mason jars to within ½ inch of top of jar. Cover with hot liquid leaving ½ inch head space. The liquid may be syrup, fruit juice, or plain water. For steps on boiling water canning, refer to page 13.

When pressure canning at altitudes of 2,000 feet or below or boiling water canning at altitudes of 1,000 feet or below, process according to specific recipe. When canning at higher altitudes, process according to the following charts.

Altitude chart for pressure canning fruit and tomato recipes

CANNING RECIPES: FRUITS AND TOMATOES

APPLES

Wash, peel, and cut apples into pieces. Place apples in an ascorbic acid solution (1 teaspoon ascorbic acid to 1 gallon water) to prevent darkening during preparation. Drain well. Boil apples in a thin syrup or water for 5 minutes. Pack hot apples in clean, hot Mason jars, leaving ½ inch head space. Cover apples with hot syrup or water, leaving ½ inch head space. Adjust jar lids.

Pressure canning - process at 6 pounds pressure, pints and quarts 8 minutes. For processing above 2,000 feet altitude, see chart above for recommended pounds of pressure.

Boiling water canning - process pints and quarts 20 minutes. For processing above 1,000 feet altitude, see chart above for recommended time.

APPLESAUCE

Wash, peel, and core apples. If desired, slice apples into ascorbic acid solution (1 teaspoon ascorbic acid to 1 gallon water) to prevent browning. Drain well. Place slices in a pan. Add ½ cup water. Cook until apples are tender. Press through food mill or sieve. Sweeten to taste. Reheat and pack hot applesauce in clean, hot Mason jars, leaving ½ inch head space. Adjust jar lids.
Pressure canning - process at 6 pounds pressure, pints 8 minutes and quarts 10 minutes. For processing above 2,000 feet altitude, see page 7 for recommended pounds of pressure.

Boiling water canning - process pints 15 minutes and quarts 20 minutes. For processing above 1,000 feet altitude, see page 7 for recommended time.

APRICOTS
Wash well-ripened, firm apricots. If peeled apricots are desired, dip 1 minute in boiling water, then in cold water, and peel. Cut apricots in halves and remove pits. Place apricots in an ascorbic acid solution (1 teaspoon ascorbic acid to 1 gallon water) to prevent darkening during preparation. Drain well. Heat apricots through in a very light, light, or medium syrup or water (see page 7). Pack hot apricots in clean, hot Mason jars, leaving ½ inch head space. Cover with boiling syrup or water, leaving ½ inch head space. Adjust jar lids.

Pressure canning - process at 6 pounds pressure, pints and quarts 10 minutes. For processing above 2,000 feet altitude, see page 7 for recommended pounds of pressure.

Boiling water canning - process pints 20 minutes and quarts 25 minutes. For processing above 1,000 feet altitude, see page 7 for recommended time.

BERRIES (EXCEPT STRAWBERRIES)
Wash firm berries carefully, removing caps and stems. Heat berries in boiling water for 30 seconds and drain. Pack hot berries in clean, hot Mason jars, leaving ½ inch head space. Cover with boiling syrup or water, leaving ½ inch head space. Adjust jar lids.

Pressure canning - process at 6 pounds pressure, pints and quarts 8 minutes. For processing above 2,000 feet altitude, see page 7 for recommended pounds of pressure.

Boiling water canning - process pints and quarts 15 minutes. For processing above 1,000 feet altitude, see page 7 for recommended time.

CHERRIES
Wash cherries and remove stems. Remove pits, if desired. If canning whole cherries, prick each cherry with a clean needle to prevent splitting. Heat cherries with ½ cup water to each quart of cherries. Cover pan and bring to a boil. Pack hot cherries and cooking liquid in clean, hot Mason jars, leaving ½ inch head space. Adjust jar lids.

Pressure canning - process at 6 pounds pressure, pints 8 minutes and quarts 10 minutes. For processing above 2,000 feet altitude, see page 7 for recommended pounds of pressure.

Boiling water canning - process pints 15 minutes and quarts 20 minutes. For processing above 1,000 feet altitude, see page 7 for recommended time.

PEACHES
Wash fully-ripened but not soft peaches. Loosen skins by dipping peaches 1 minute in boiling water, then in cold water. Peel. Cut peaches in half and remove pits. Slice if desired. Place peaches in an ascorbic acid solution (1 teaspoon ascorbic acid to 1 gallon water) to prevent darkening during preparation. Drain well. Heat peaches through in very light, light, or medium syrup or water (see page 7). Pack hot peaches in clean, hot Mason jars, leaving ½ inch head space. Cover with boiling syrup or water, leaving ½ inch head space. Adjust jar lids.

Pressure canning - process at 6 pounds pressure, pints and quarts 10 minutes. For processing above 2,000 feet altitude, see page 7 for recommended pounds of pressure.

Boiling water canning - process pints 20 minutes and quarts 25 minutes. For processing above 1,000 feet altitude, see page 7 for recommended time.

PEARS
Wash pears. Peel, cut in half, and core. Slice pears, if desired. Place pears in an ascorbic acid solution (1 teaspoon ascorbic acid to 1 gallon water) to prevent darkening during preparation. Drain well. Heat pears through in very light, light, or medium syrup or water (see page 7). Pack hot pears in clean, hot Mason jars, leaving ½ inch head space. Cover with boiling syrup or water, leaving ½ inch head space. Adjust jar lids.

Pressure canning - process at 6 pounds pressure, pints and quarts 10 minutes. For processing above 2,000 feet altitude, see page 7 for recommended pounds of pressure.

Boiling water canning - process pints 20 minutes and quarts 25 minutes. For processing above 1,000 feet altitude, see page 7 for recommended time.

PLUMS
Wash firm ripe plums. Remove stems. If plums are to be canned whole, prick each side with a fork. Freestone varieties may be cut in halves and pitted. Heat plums to boiling in very light, light, or medium syrup (see page 7). Boil 2 minutes. Pack hot plums in clean, hot Mason jars, leaving ½ inch head space. Cover with boiling syrup or water, leaving ½ inch head space. Adjust jar lids.

Pressure canning - process at 6 pounds pressure, pints and quarts 10 minutes. For processing above 2,000 feet altitude, see page 7 for recommended pounds of pressure.

Boiling water canning - process pints 20 minutes and quarts 25 minutes. For processing above 1,000 feet altitude, see page 7 for recommended time.

RHUBARB
Wash young, tender rhubarb. Remove ends and cut into ½ inch pieces. Add ½ cup sugar to each quart of rhubarb. Let stand until juice appears. Heat rhubarb slowly to boiling. Pack hot rhubarb in clean, hot Mason jars, leaving ½ inch head space. Adjust jar lids.

Pressure canning - process at 6 pounds pressure, pints and quarts 8 minutes. For processing above 2,000 feet altitude, see page 7 for recommended pounds of pressure.

Boiling water canning - process pints and quarts 15 minutes. For processing above 1,000 feet altitude, see page 7 for recommended time.

TOMATOES - WHOLE OR HALVED
(packed raw without added liquid)
Wash medium, smooth, firm, ripe tomatoes. Loosen skins by dipping tomatoes 1 minute in boiling water, then in cold water. Peel and remove core. Leave whole or halve. Add 2 tablespoons of bottled lemon juice or ½ teaspoon of citric acid per quart of tomatoes. For pints, use 1 tablespoon bottled lemon juice or ¾ teaspoon citric acid. Add 1 teaspoon salt to each quart, ½ teaspoon to each pint, if desired. Fill jars with raw tomatoes, leaving ½ inch head space. Press tomatoes in the jars until spaces between them fill with juice. Leave ½ inch head space. Adjust jar lids.

Pressure canning - process at 6 pounds pressure, pints and quarts 40 minutes. For processing above 2,000 feet altitude, see page 7 for recommended pounds of pressure.
**Boiling water canning** - process pints and quarts 85 minutes. For processing above 1,000 feet altitude, see page 7 for recommended time.

**TOMATO JUICE**
Wash ripe, juicy tomatoes. Remove stem ends and cut into pieces. Simmer tomatoes until softened, stirring often. Strain tomatoes. Heat juice again to boiling. Pour hot tomato juice into clean, hot Mason jars, leaving ½ inch head space. Add 2 tablespoons of bottled lemon juice or ½ teaspoon citric acid to each quart. Add 1 tablespoon of bottled lemon juice or ¼ teaspoon citric acid to each pint. Adjust jar lids.

**Pressure canning** - process at 6 pounds pressure, pints and quarts 20 minutes. For processing above 2,000 feet altitude, see page 7 for recommended pounds of pressure.

**Boiling water canning** - process pints 35 minutes and quarts 40 minutes. For processing above 1,000 feet altitude, see page 7 for recommended time.

**TOMATO SAUCE**
Prepare and press as for making tomato juice (see recipe above). Simmer in large saucepan until sauce reaches desired consistency. Boil until volume is reduced by about one-third for thin sauce, or by one-half for thick sauce. Pour hot sauce in clean, hot Mason jars, leaving ½ inch head space. Add 2 tablespoons of bottled lemon juice or ½ teaspoon citric acid to each quart. Add 1 tablespoon of bottled lemon juice or ¼ teaspoon citric acid to each pint. Adjust jar lids.

**Pressure canning** - process at 6 pounds pressure, pints and quarts 20 minutes. For processing above 2,000 feet altitude, see page 7 for recommended pounds of pressure.

**Boiling water canning** - process pints 35 minutes and quarts 40 minutes. For processing above 1,000 feet altitude, see page 7 for recommended time.

**Pressure Canning Vegetables**

**Pressure canning is the only safe method for canning vegetables.**

Young, tender, fresh vegetables, slightly immature, are better for canning than those which are overripe. As a rule, vegetables are best if canned immediately after picking, since flavor decreases upon standing and often unpleasant color changes take place. Avoid bruising vegetables because spoilage organisms grow more rapidly on bruised vegetables than on unblemished ones.

Wash and prepare garden fresh vegetables as you would for cooking.

To raw pack vegetables, simply place the prepared vegetables into clean Mason jars and cover with boiling water.

To hot pack vegetables, precook in boiling water until heated through. Pack pre-cooked vegetables into clean, hot Mason jars and cover with boiling water. Whenever possible, the precooking water should be used as liquid to cover the vegetables after packing into Mason jars. However, there are a few vegetables, such as greens and asparagus, which make the cooking water bitter and undesirable to use.

When packing vegetables, leave 1 inch head space in Mason jars.

Foods may be processed with or without salt. If salt is desired, use only pure canning salt. Table salt contains a filler which may cause cloudiness in bottom of jars. Add ½ teaspoon canning salt to each pint jar, 1 teaspoon to each quart jar, if desired.

Follow step-by-step directions beginning on page 5 for canning procedure. Process specific vegetables according to the following recipes.

When pressure canning at altitudes of 2,000 feet or below, process according to specific recipe. When canning at higher altitudes, process according to the following chart.

**Altitude chart for canning vegetables**

<table>
<thead>
<tr>
<th>Altitude</th>
<th>Pints and Quarts</th>
</tr>
</thead>
<tbody>
<tr>
<td>2,001 – 4,000 ft.</td>
<td>12 lbs. 12 lbs.</td>
</tr>
<tr>
<td>4,001 – 6,000 ft.</td>
<td>13 lbs. 13 lbs.</td>
</tr>
<tr>
<td>6,001 – 8,000 ft.</td>
<td>14 lbs. 14 lbs.</td>
</tr>
</tbody>
</table>

Processing time is the same at all altitudes.

**CANNING RECIPES: VEGETABLES**

**ASPARAGUS**
Wash and drain asparagus. Remove tough ends and scales. Rinse. Leave asparagus whole or cut into pieces.

Raw Pack - Pack raw asparagus tightly in clean Mason jars, leaving 1 inch head space.

Hot Pack - Cover asparagus with boiling water and boil 2 or 3 minutes. Pack hot asparagus loosely in clean, hot Mason jars, leaving 1 inch head space.

Cover with boiling water, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints 30 minutes and Quarts 40 minutes. For processing above 2,000 feet altitude, see chart above for recommended pounds of pressure.

**SNAP BEANS-GREEN OR YELLOW**
Wash young, tender snap beans thoroughly. Remove stem and blossom ends or any “strings.” Leave whole or cut into 1 inch pieces.

Raw Pack - Pack raw beans tightly in clean Mason jars leaving 1 inch head space.

Hot Pack - Cover beans with boiling water and boil 5 minutes. Pack hot beans loosely in clean, hot Mason jars, leaving 1 inch head space.

Cover with boiling water, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints 20 minutes and Quarts 25 minutes. For processing above 2,000 feet altitude, see chart above for recommended pounds of pressure.

**BEETS**
Trim tops of young, tender, sweet beets, leaving 1 inch of stem. Leave stem and top of root to prevent bleeding and loss of color. Wash thoroughly. Cover with boiling water and boil 15 to 25 minutes or until skins slip off easily. Remove skins, stems, and roots. Small beets may be left whole. Cut medium or large beets into ½ inch cubes or slices; halve or quarter very large slices. Pack hot beets in clean, hot Mason jars, leaving 1 inch head space. Cover with boiling water, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints 30 minutes and Quarts 35 minutes. For processing above 2,000 feet altitude, see chart above for recommended pounds of pressure.
CARROTS
Wash thoroughly and scrape young, tender carrots. Carrots may be left whole, sliced, or diced.

Raw Pack - Pack raw carrots tightly in clean Mason jars, leaving 1 inch head space.

Hot Pack - Cover carrots with boiling water, bring to a boil and simmer 5 minutes. Pack hot carrots in clean, hot Mason jars, leaving 1 inch head space.

Cover with boiling water leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints 25 minutes and Quarts 30 minutes. For processing above 2,000 feet altitude, see page 9 for recommended pounds of pressure.

CORN-WHOLE KERNEL
Husk and remove silk from young, tender, freshly picked corn. Wash and cut corn from cob at about ¾ the depth of the kernel.

Raw Pack - Pack raw corn loosely in clean Mason jars, leaving 1 inch head space.

Hot Pack - To each quart of corn add 1 cup boiling water and bring to a boil. Pack hot corn loosely in clean, hot Mason jars, leaving 1 inch head space.

Cover with boiling water leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints 55 minutes and Quarts 85 minutes. For processing above 2,000 feet altitude, see page 9 for recommended pounds of pressure.

GREENS
Sort young, tender, freshly picked greens discarding wilted tough leaves, stems, and roots. Wash greens thoroughly. Do not raw pack greens. Place approximately 1 pound of greens at a time in a cheese cloth bag and steam 3 to 5 minutes or until well wilted. Pack hot greens loosely in clean, hot Mason jars, leaving 1 inch head space. Cover with boiling water, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints 70 minutes and Quarts 90 minutes. For processing above 2,000 feet altitude, see page 9 for recommended pounds of pressure.

LIMA BEANS
Shell and wash young, tender beans thoroughly.

Raw Pack - Pack raw lima beans loosely in clean Mason jars. For small beans, leave 1 inch head space in pint jars, ½ inches head space in quart jars. For large beans, leave 1 inch head space in pint jars, 1¼ inches head space in quart jars.

Hot Pack - Cover beans with boiling water and bring to a boil. Pack hot beans loosely in clean, hot Mason jars, leaving 1 inch head space.

Cover with boiling water, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints 40 minutes and Quarts 50 minutes. For processing above 2,000 feet altitude, see page 9 for recommended pounds of pressure.

MUSHROOMS
Trim stems and discolored parts of mushrooms. Soak mushrooms in cold water for 10 minutes to remove soil. Wash in clean water. Leave small mushrooms whole; cut larger ones in halves or quarters. Cover with water in a saucepan and boil 5 minutes. Pack hot mushrooms in clean, hot Mason jars, leaving 1 inch head space. For better color, add ¼ teaspoon of ascorbic acid powder, or a 500-milligram tablet of vitamin C. Cover with boiling water, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Half pints and Pints 45 minutes. For processing above 2,000 feet altitude, see page 9 for recommended pounds of pressure.

OKRA
Wash and trim young, tender okra pods. Remove stem, without cutting into pods if okra is to be canned whole. If desired, slice okra into 1 inch pieces.

Hot Pack - Cover okra with boiling water and boil 2 minutes. Pack hot okra in clean, hot Mason jars, leaving 1 inch head space.

Cover with boiling water, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints 25 minutes and Quarts 40 minutes. For processing above 2,000 feet altitude, see page 9 for recommended pounds of pressure.

PEAS-GREEN
Wash and shell young, tender freshly picked green peas. Rinse.

Raw Pack - Pack raw peas loosely in clean Mason jars, leaving 1 inch head space. Do not shake or press down.

Hot Pack - Cover peas with boiling water and bring to a boil. Boil 2 minutes. Pack hot peas loosely in clean, hot Mason jars, leaving 1 inch head space. Do not shake or press down.

Cover with boiling water, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints and Quarts 40 minutes. For processing above 2,000 feet altitude, see page 9 for recommended pounds of pressure.

POTATOES-NEW WHOLE
Wash, scrape and rinse new potatoes 1 to 2½ inches in diameter.

Hot Pack - Cover potatoes with boiling water and boil 10 minutes. Pack hot potatoes in clean, hot Mason jars, leaving 1 inch head space.

Cover with boiling water, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints 35 minutes and Quarts 40 minutes. For processing above 2,000 feet altitude, see page 9 for recommended pounds of pressure.

PUMPKIN AND WINTER SQUASH
Wash, remove seeds, cut into 1 inch slices, and peel. Cut flesh into 1 inch cubes. Boil 2 minutes in water. Pack hot squash cubes loosely in clean, hot Mason jars, leaving 1 inch head space. Cover with boiling water, leaving 1 inch head space. Adjust jar lids.
Process at 11 pounds pressure - Pints 55 and Quarts 90 minutes. For processing above 2,000 feet altitude, see page 9 for recommended pounds of pressure.

**SWEET POTATOES**
Wash sweet potatoes. Boil or steam just until skins slip off easily (15 to 20 minutes). Remove skins and cut into pieces. Pack hot sweet potatoes in clean, hot Mason jars, leaving 1 inch head space. Cover with boiling water, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints 65 minutes and Quarts 90 minutes. For processing above 2,000 feet altitude, see page 9 for recommended pounds of pressure.

**Pressure Canning Meat**
Pressure canning is the only safe method for canning meat.

All meat should be handled carefully to avoid contamination from the time of slaughtering until the products are canned. Animals should be correctly slaughtered, canned promptly or kept under refrigeration until processed. If you slaughter your own meat, contact your local county agricultural agent for complete information on slaughtering, chilling, and aging the meat.

Keep meat as cool as possible during preparation for canning, handle rapidly and process meat as soon as it is packed. Most meats need only be wiped with a damp cloth. Use lean meat for canning; remove most of the fat. Cut off gristle and remove large bones. Cut into pieces convenient for canning.

Prior to processing, all meat may be boiled, broiled, fried, or roasted until rare.

Prepare a concentrated broth from the bones and meat trimmings. This broth is excellent for precooking meat by boiling and for pouring over meat in Mason jars.

Meat should not be browned with flour nor should flour be used in the broth to make gravy for pouring over the packed meat. Pack hot meat loosely, leaving 1 inch head space in Mason jars.

Meats may be processed with or without salt. If salt is desired, use only pure canning salt. Table salt contains a filler which may cause cloudiness in bottom of jar. Use ½ teaspoon salt to each pint, 1 teaspoon to each quart. More or less salt may be added to suit individual taste. If you are on a salt free diet, salt may be omitted.

Follow step-by-step directions beginning on page 5 for canning procedure. Process meats according to the following recipes.

When pressure canning at altitudes of 2,000 feet or below, process according to specific recipe. When canning at higher altitudes, process according to the following charts.

### Altitude chart for canning meat, poultry, fish, seafood, and soup

<table>
<thead>
<tr>
<th>Altitude</th>
<th>Pints and Quarts</th>
</tr>
</thead>
<tbody>
<tr>
<td>2,001 – 4,000 ft.</td>
<td>12 lbs. 12 lbs.</td>
</tr>
<tr>
<td>4,001 – 6,000 ft.</td>
<td>13 lbs. 13 lbs.</td>
</tr>
<tr>
<td>6,001 – 8,000 ft.</td>
<td>14 lbs. 14 lbs.</td>
</tr>
</tbody>
</table>

Processing time is the same at all altitudes.

**CANNING RECIPES: MEAT**

**CUT-UP MEAT (strips, cubes, or chunks)**

*Bear, Beef, Pork, Lamb, Veal, and Venison*

Remove excess fat. Soak strong-flavored wild meats for 1 hour in brine water containing 1 tablespoon of salt per quart of water. Rinse. Remove large bones and cut into desired pieces.

- **Raw Pack** - Fill jars with raw meat pieces, leaving 1 inch head space. **DO NOT ADD LIQUID.** Adjust jar lids.
- **Hot Pack** - Precook meat until rare by boiling, boiling or frying. Pack hot meat loosely in clean, hot Mason jars, leaving 1 inch head space. Cover meat with boiling meat juice, water, or tomato juice (especially with wild game) leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints 75 minutes and Quarts 90 minutes. For processing above 2,000 feet altitude, see chart in previous column for recommended pounds of pressure.

**GROUND MEAT**

*Bear, Beef, Pork, Lamb, Veal, and Venison*

With venison add one part high quality pork fat to three or four parts venison before grinding. Use freshly made sausage, seasoned with salt and cayenne pepper (sage may cause a bitter off-flavor). Add 1 teaspoon salt to each pound of ground meat if desired. Mix well. Shape meat into patties or balls or cut cased sausage into 3 to 4 inch links. Cook until lightly browned. Ground meat may be sauteed without shaping. Remove excess fat. Fill jars with pieces, leaving 1 inch head space. Cover meat with boiling juice or water, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints 75 minutes and Quarts 90 minutes. For processing above 2,000 feet altitude, see chart in previous column for recommended pounds of pressure.

**Pressure Canning Poultry**
Pressure canning is the only safe method for canning poultry.

Cut poultry into convenient pieces for packing and precook until medium done or until pieces, when cut, show almost no pink color at the bone.

Precook by boiling in water or in a concentrated broth for more flavor. Make broth from bones and bony pieces, neck, back, and wing tips. Pack hot meat in clean, hot Mason jars, leaving 1 inch head space. Do not pack food tightly.

Poultry may be processed with or without salt. If salt is desired, use only pure canning salt. Table salt contains a filler which may cause cloudiness in bottom of jar. Use ½ teaspoon salt to each pint, 1 teaspoon to each quart. If you are on a salt free diet, salt may be omitted.

Follow step-by-step directions beginning on page 5 for canning procedure. Process poultry according to the following recipes.

**CANNING RECIPES: POULTRY**

**CUT-UP POULTRY**

Cut poultry into serving size pieces. If desired, remove bone. Boil, steam, or bake poultry slowly to medium done. Poultry is...
medium done when pink color in center is almost gone. Pack hot poultry loosely in clean, hot Mason jars, leaving 1 ½ inch head space. Cover poultry with boiling broth or water, leaving 1 ½ inch head space. Adjust jar lids.

Process at
11 pounds pressure
With Bone
Pints 65 minutes
Quarts 75 minutes
Without Bone
Pints 75 minutes
Quarts 90 minutes

For processing above 2,000 feet altitude, see page 11 for recommended pounds of pressure.

**RABBIT**

Soak dressed rabbits 1 hour in water containing 1 tablespoon of salt per quart, and then rinse. Remove excess fat. Cut into serving size pieces. Boil, steam, or bake to medium done. Rabbit is medium done when pink color in center is almost gone. Pack hot rabbit loosely in clean, hot Mason jars, leaving 1¼ inch head space. Cover rabbit with boiling broth or water leaving 1¼ inch head space. Adjust jar lids.

Process at
11 pounds pressure
With Bone
Pints 65 minutes
Quarts 75 minutes
Without Bone
Pints 75 minutes
Quarts 90 minutes

For processing above 2,000 feet altitude, see page 11 for recommended pounds of pressure.

**Pressure Canning Fish and Seafood**

**Pressure canning is the only safe method for canning fish and seafood.**

Only fresh fish should be canned and these should be bled and thoroughly cleaned of all viscera and membranes when caught, or as soon as possible. Canning should be restricted to proven varieties where it is definitely known that a product of good quality may be obtained.

Follow step-by-step directions beginning on page 5 for canning procedure. Process fish and seafood according to the following recipes.

**CANNING RECIPES: FISH AND SEAFOOD**

**FISH-GENERAL METHOD**

Blue, Mackerel, Salmon, Steelhead, Trout, and other fatty fish except tuna. Clean fish thoroughly, filet large fish or leave small pan fish whole. Cut into container length pieces. Pack with skin side of fish to the outside of the Mason jar, leaving 1 inch head space. DO NOT ADD LIQUIDS. Adjust jar lids.

Process at 11 pounds pressure - Pints 100 minutes. For processing above 2,000 feet altitude, see page 11 for recommended pounds of pressure.

**CLAMS-WHOLE OR MINCED**

Keep clams on ice until ready to can. Scrub shells thoroughly and rinse, steam 5 minutes, and open. Remove clam meat. Collect and save clam juice. Wash clam meat in salted water using 1 teaspoon of salt for each quart of water. Rinse and cover clam meat with boiling water containing 2 tablespoons of lemon juice or ½ teaspoon of citric acid per gallon. Boil 2 minutes and drain. To make minced clams, grind clams with a meat grinder or food processor. Fill jars loosely with pieces leaving 1 inch head space and add hot clam juice and boiling water if needed, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Half pints 60 minutes and Pints 70 minutes. For processing above 2,000 feet altitude, see page 11 for recommended pounds of pressure.

**CRAB**

Place crabs in ice water 1 to 2 minutes. Separate claws from body, remove waste portions, and wash thoroughly. Place bodies and claws in water containing ¼ cup lemon juice and 2 tablespoons of salt per gallon. Simmer 20 minutes. Cool in cold water, drain, and remove meat from shells. Soak meat 2 minutes in cold water containing 2 cups lemon juice or 4 cups of white vinegar and 2 tablespoons of salt per gallon. Drain and remove excess moisture. Pack loosely into clean hot Mason jars, leaving 1 inch head space. For each ½ pint, add ½ teaspoon citric acid or 2 tablespoons lemon juice and cover with boiling water, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Half pints 70 minutes and Pints 80 minutes. For processing above 2,000 feet altitude, see page 11 for recommended pounds of pressure.

**TUNA**

Clean fish thoroughly. Place fish belly side down on a rack, in the bottom of a large baking pan. Precook fish at 350° for 1 hour. Refrigerate cooked fish overnight to firm the meat. Remove skin and backbone. Cut meat in pieces 1 inch shorter than Mason jars and pack solidly. Fill jars with hot cooking oil or boiling water, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Half pints and Pints 100 minutes. For processing above 2,000 feet altitude, see page 11 for recommended pounds of pressure.

**Pressure Canning Soups**

**Pressure canning is the only safe method for canning soups.**

Soup or soup stock is quickly and easily canned. Soup should always be cooked ready for serving, then poured into clean, hot Mason jars, leaving 1 inch head space. Generally, vegetable soups are more satisfactory if the stock and vegetable mixture is canned separately and combined at the time of serving. If desired, add cooked cereals, rice, noodles, and spaghetti before serving.

Follow step-by-step directions beginning on page 5 for canning procedure. Process soups according to the following recipes.

**CANNING RECIPES: SOUP**

**BEEF SOUP STOCK**

Saw or crack fresh trimmed beef bones to enhance extraction of flavor. Rinse bones and place in a large kettle, cover bones with water and simmer 3 to 4 hours. Remove bones, cool broth, and remove meat. Skim off fat, add meat removed from bones to broth, and reheat to boiling. Fill jars, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints 20 minutes and Quarts 25 minutes. For processing above 2,000 feet altitude, see page 11 for recommended pounds of pressure.

**CHICKEN SOUP STOCK**

Place large carcass bones in stockpot, add enough water to cover
bones. Cover and simmer 30 to 45 minutes or until meat can be easily removed from bones. Remove meat from bones, cool broth, and discard excess fat. Return meat to broth and bring to a boil. Fill jars, leaving 1 inch head space. Adjust jar lids.

Process at 11 pounds pressure - Pints 20 minutes and Quarts 25 minutes. For processing above 2,000 feet altitude, see page 11 for recommended pounds of pressure.

**Helpful Hints for Pressure Canning**

- Bubbles often appear in the jar after it is removed from canner because food is still boiling in jar. Ordinarily bubbles do not appear once the product has been allowed to thoroughly cool.
- Jar breakage during processing is caused by: (1) Packing jar too solidly or overfilling; (2) Weakened, cracked jars; (3) Jars touching bottom of canner; (4) Lids improperly tightened; (5) Use of jars other than Mason jars.
- Liquid lost from jars during processing is caused by: (1) Packing jars too solidly with food when processing; (2) Filling jars too full; (3) Too high a temperature or too high pressure; (4) Variation or sudden lowering of temperature in the canner. When processing food in glass jars, pressure regulator should not be taken off the vent pipe and cover should not be removed until air vent/cover lock has dropped and pressure has been completely reduced; (5) Failure to adjust jar lids according to manufacturer’s directions.
- The loss of liquid from jars during processing may be unattractive but it will not interfere with the keeping qualities of the food as long as the jar was processed correctly and is sealed.
- It is better to overprocess food than underprocess as overprocessing will do little harm, but underprocessing may result in spoilage and unsafe food.
- Flat sour, a type of food spoilage, is caused by canning overripe food or allowing precooked foods to stand in jar too long before processing. It may be prevented by using fresh products and properly processing, cooling, and storing. Flat sour shows no indication of spoilage until jar is opened.
- Food spoilage or jars not sealing is caused by: (1) Incomplete sterilization. Failure to follow exact timetables and recipes; (2) Failure to wipe sealing edge of jar clean before placing lid on jar; (3) Foods, seeds, or grease lodged between lid and jar; (4) Jars which are nicked or cracked or have sharp sealing edges; (5) If Mason jar and two-piece metal lid-band screwed down too loosely before processing; (6) Turning jars upside down while jars are cooling and sealing.
- Mold can form only in the presence of air. Therefore, jars are not sealed if mold is present.
- The black deposit sometimes found on the underside of a lid is caused by tannins in the food or hydrogen sulfide which is liberated from the food by the heat of processing. This does not indicate spoilage.
- If a jar does not seal, use the food at once, freeze or repack using different lids. Reprocess for the full recommended processing time.
- As a safeguard against using canned foods that may be affected with spoilage that is not readily detected, pour all low-acid foods (all meats and vegetables) into a saucepan and boil 10 to 15 minutes before tasting or using.
- Two-piece metal caps seal by the cooling of the contents of the jar, not through pressure of the screw band on the lid. Therefore, although the screw band is firmly tight, the jar is not sealed until cooled. During processing, the flexible metal lid permits air to be exhausted from the jar.
- Adjusting two-piece metal caps firmly tight means as tight as the hand can conveniently screw the band. Do not use undue exertion or wrenches.
- It is not necessary for the liquid on canned meats to congeal. The liquid will congeal only when there is a large amount of gelatin from cartilage or connective tissue present.
- The loss of color from beets, during canning, is usually due to the variety of beets used or beets that are too old. If possible, can young tender very dark red beets which are freshly gathered. Precook beets with 2 inches of the stem and all of the root on, as this helps to retain the juices.
- Discoloration of peaches and pears on the top of the jar is often due to enzyme activity or oxidation which means that the heat of cooking or processing was not applied long enough or the temperature used was not high enough to render the enzyme inactive or expel the air from the jar. The remedy is to exhaust jars thoroughly for 7 to 10 minutes when canning.
- Fruit which has been canned without sugar will often turn brown when exposed to air just as fresh fruit does.
- The diameter of Mason jars may vary from one manufacturer to another. Before filling Mason jars, test load your canner. It may be necessary to double-deck pint and ½ pint jars to reach the maximum capacity of your canner as shown in the chart on page 4. It is recommended that you stagger the jars by placing one jar on top of two. Jars may touch. The canning rack which accompanied your Pressure Canner/Cooker must be placed on the bottom of the canner to prevent jar breakage. Although it is not necessary to use a rack between layers of jars, if you wish to do so, a rack can be ordered from the Presto Consumer Service Department. See page 23 for address.

**How to Can Foods Using Boiling Water Method**

1. Place cooking/canning rack on bottom of canner. Fill canner halfway with water.
2. Preheat water to 140°F for raw-packed foods and to 180°F for hot-packed foods.
3. Remove overpressure plug and pressure regulator from canner cover and set aside.
4. Use jar lifter to place filled jars, with lids and rings fastened according to manufacturer’s directions, on cooking/canning rack in canner.
5. Check water level. Add more boiling water, if needed, so the water level is at least 1 inch above jar tops.
6. Turn heat to its highest setting until water boils vigorously.
7. Look through the vent pipe on the canner cover to be certain it is open before placing cover on canner. To clean the vent pipe, draw a pipe cleaner or small brush through the opening.

8. Place cover on canner, aligning the “V” on the cover with the mark on the body handle and lock securely by turning in the direction indicated to close the cover (clockwise). **Cover handles must be centered over body handles. Do not force beyond this position.**

9. Set a timer for the minutes required for processing the food based on tested canning recipe.

10. Lower the heat setting to maintain a gentle boil throughout processing.

11. Add more boiling water, if needed, to keep the water level above the jars.

12. When jars have been boiled for the recommended time, turn off the heat and remove the canner cover.

13. Using jar lifter, remove jars and place them on a towel, leaving at least 1-inch spaces between jars during cooling.

14. Allow jars to cool naturally 12 to 24 hours before checking for a seal. Do not retighten bands.

**CANNING RECIPES: BOILING WATER METHOD**

The following recipes are safely canned by the boiling water method. Do not pressure can these recipes because the food quality would be unacceptable.

### RASPBERRY JAM

- 2 quarts raspberries
- 1 package powdered pectin
- ½ cup water
- 1 tablespoon lemon juice

### APPLE BUTTER

- 16 medium apples (about 4 pounds)
- 2 teaspoons cinnamon
- ¼ teaspoon cloves
- 4 cups sugar

**To prepare pulp:** Wash apples; remove stem and blossom ends; do not peel or core. Cut apples into small pieces. Add 2 cups water; cover; simmer 20 to 25 minutes or until apples are soft. Press through a sieve or food mill. Measure 2 quarts apple pulp.

**To prepare butter:** Combine apple pulp, sugar, and spices in a large saucepot. Cook slowly until thick enough to round up on a spoon. As pulp thickens, stir frequently to prevent sticking. (If too thick, add a small amount of water or apple juice for desired consistency.) Ladle hot butter into hot jars, leaving ½-inch headspace. Adjust two-piece caps. Process 10 minutes using boiling water canning method described on pages 13-14. Yield: about 5 pints.

### BREAD AND BUTTER PICKLES

- 4 pounds 4- to 6-inch cucumbers, cut into slices
- 2 pounds onions, thinly sliced (about 8 small)
- ½ cup canning salt
- 2 cups sugar
- 2 tablespoons mustard seed

**Note:** For fresh pack pickled foods, allow 4 to 6 weeks for the product to cure and develop a satisfactory flavor.

### DILL PICKLES

- 8 pounds 4- to 6-inch cucumbers, cut lengthwise into halves
- ¾ cup sugar
- ½ cup canning salt
- 1 quart vinegar, 5% acidity
- 1 quart water
- 3 tablespoons mixed pickling spices
- Green or dry dill (1 head per jar)

Wash and drain cucumbers. Combine sugar, salt, vinegar, and water in a large saucepot. Tie spices in a spice bag; add spice bag to vinegar mixture; simmer 15 minutes. Pack cucumbers into hot jars, leaving ¼-inch headspace; put one head of dill in each jar. Ladle hot liquid over cucumbers, leaving ¼-inch headspace. Remove air bubbles. Adjust two-piece caps. Process pints and quarts 15 minutes using boiling water canning method described on pages 13-14. Yield: about 7 pints or 3 quarts.

**Note:** For fresh pack pickled foods, allow 4 to 6 weeks for the product to cure and develop a satisfactory flavor.

### ZESTY SALSA

- 10 cups chopped, seeded, peeled, cored tomatoes (about 6 pounds)
- 5 cups chopped and seeded green peppers (about 2 pounds)
- 5 cups chopped onions (about 1½ pounds)
- 2½ cups chopped and seeded hot peppers (about 1 pound)
- 1¾ cups cider vinegar
- 3 cloves garlic, minced
- 2 tablespoons cilantro, minced
- 1 tablespoon salt
- 1 teaspoon hot pepper sauce (optional)

**Note:** When cutting or seeding hot peppers, wear rubber gloves to prevent hands from being burned.

For boiling water canning information for fruits and tomatoes, refer to page 7.

**Pressure Cooking in Your Pressure Canner**

Follow the step-by-step instructions beginning on page 15 for cooking in your pressure canner. Prepare food according to directions in specific recipe.

The canner should never be filled over ⅔ full. Many foods tend to expand when cooked. If the canner is filled over ⅔ full, it is possible for food to expand enough to plug the vent pipe, air vent/cover lock, and overpressure plug. If all of these devices were to become blocked, excess pressure would be unable to escape and would build up beyond safe control levels. Therefore, when cooking any food, do not let any portion extend above the ⅔ full level.
Rice and dried beans and peas expand during cooking. When preparing these foods, do not fill the canner over \( \frac{1}{2} \) full. Always pre-soak dried beans and peas overnight in oil, salt, and water (see page 19). Never pressure cook applesauce, cranberries, rhubarb, pearl barley, split peas, oatmeal or other cereals, dried soup mixes, or foods such as noodles, macaroni or spaghetti. These foods tend to foam, froth, and sputter and may block the vent pipe.

If the vent pipe becomes clogged, the pressure regulator will not rock and pressure cannot be released normally. When excess pressure builds up in the canner, the overpressure plug will be forced out of its cover opening, releasing the excess pressure. If the overpressure plug is ever forced out of its cover opening due to excess pressure while cooking or canning, it is important to call the Consumer Services Department at 1-800-877-0441. Do not attempt to replace the overpressure plug.

The canning-cooking rack can be used to hold foods above the liquid level. This will allow cooking several different foods at the same time without an intermingling of flavors. When a natural blending of flavors is desired, do not use the canning-cooking rack. When cooking two or more foods at the same time, choose those which require the same length of cooking time. The length of cooking time for a specific food varies greatly with the thickness of the food. For example, a \( \frac{1}{2} \)-inch thick slice of potato will be done in 3 minutes whereas a \( \frac{3}{4} \)-inch thick slice of potato will be done in 5 minutes. For foods which do not require the same cooking time, the canner may be quick cooled when there is just enough cooking time left for the food requiring the shorter cooking time. When the pressure is completely reduced, the cover may be opened and the food added. Then, again place the cover on the canner and proceed with cooking.

Questions?

For answers to any questions regarding recipes or timetables, call or write: Home Economics Department, National Presto Industries, Inc., 3925 North Hastings Way, Eau Claire, Wisconsin 54703-3703, phone 1-800-368-2194 (e-mail: contact@GoPresto.com). When writing, please include a phone number and a time when you can be reached during weekdays if possible. Inquiries will be answered promptly by letter, telephone, or email.

How to Pressure Cook Foods

IMPORTANT: Read carefully. Do not attempt to use your canner before reading these instructions.

Follow these step-by-step instructions for pressure cooking in your canner. For preparing only meats, poultry, or fish, omit step 4. For preparing only vegetables, soups, or desserts, omit steps 1-2-3. Do not fill the canner over \( \frac{1}{2} \) full. When cooking a solid mass of food, such as soups, do not fill the canner over \( \frac{1}{2} \) full.

1. Preheat canner with cover off. A medium heat setting is adequate for most range burners. Consult the instruction book which accompanied your range for recommended heat settings. Place cooking oil in canner according to recipe. Caution: Pouring cooking oil into any overheated pan could cause the oil to flare up.

2. Place meat in bottom of canner and sear until deep brown and crisp. Do not fill canner over \( \frac{2}{3} \) full. Lower heat if necessary to prevent burning.

3. Brown meat thoroughly on all sides. Season according to taste. Remove canner from heat and allow to cool slightly.

4. If more than one food is to be prepared at the same time, remove meat and place canning-cooking rack in bottom of canner. Then, arrange meat and other foods on the rack. Do not fill the canner over \( \frac{2}{3} \) full.

5. Add liquid according to recipe. (Always use at least 2 cups of liquid.)

6. Look through the vent pipe to be certain it is open before closing the cover. To clean the vent pipe, draw a pipe cleaner or small brush through the opening.

7. Place cover on canner, aligning the CLOSE V OPEN on the cover with the mark on the body handle and lock securely by turning in the direction indicated to close (clockwise). Cover handles must be centered directly over body handles. Do not force beyond this position. If the cover is difficult to lock at this point, it is due to expansion of the canner from heating. If this occurs, remove cover and allow the canner to cool slightly. Do not replace cover on burner until cover is in its fully closed position (cover handles directly above body handles).

8. Place pressure regulator on vent pipe. If the pressure regulator is not correctly positioned, the canner will not operate properly.
9. Heat canner until pressure dial gauge registers 15 pounds pressure. A relatively high heat setting is necessary for most range burners. Cooking time begins when pressure gauge registers 15 pounds pressure. Adjust heat to maintain 15 pounds pressure on the pressure dial gauge to prevent excess steam from escaping. (If the pressure regulator begins to rock before 15 pounds pressure is reached on the gauge, lower heat to maintain a slow, steady rocking motion of the pressure regulator and cook at this pressure.)

10. Cook for the length of time specified in recipe. When cooking time is completed, turn off gas burner or remove canner from electric burner, or other constant heat unit. Reduce pressure according to recipe.

11A. When recipe states “let pressure drop of its own accord,” set the canner aside to cool. Pressure is completely reduced when the air vent/cover lock and over-pressure plug have dropped and no steam escapes when the pressure regulator is tilted. Do not use the pressure dial gauge as an indicator of when pressure is completely reduced.

11B. When recipe states “cool canner at once,” the canner must be cooled immediately under a water faucet or by pouring water over it. When the air vent/cover lock and over-pressure plug have dropped and no steam escapes when the regulator is tilted, pressure is completely reduced. Do not use the pressure dial gauge as an indicator of when pressure is completely reduced.

11C. Or, cool at once by placing the canner in a pan of cold water until the air vent/cover lock and over-pressure plug have dropped and no steam escapes when the regulator is tilted. Do not use the pressure dial gauge as an indicator of when pressure is completely reduced.

12. After the air vent/cover lock and overpressure plug have dropped and no steam escapes when the regulator is tilted, remove the pressure regulator. Do not remove the pressure regulator until pressure is completely reduced. Always remove the pressure regulator before opening the cover.

13. Remove cover by turning counter-clockwise until the mark on the body handle aligns with the CLOSE V OPEN on the cover. Lift cover toward you to keep steam away from you. If the cover is locked or turns hard after the regulator is removed, there may still be some pressure in the canner. The cover should not be forced off. Cool the canner until the body is cool enough for the cover to be removed easily.

14. Remove food and serve. If food is not to be served immediately, it can be easily kept warm by placing aluminum foil over the top of the canner to retain heat. The canner cover should never be used for this purpose.

**Pressure Cooking Meat**

Savory, tender meat is easily prepared in the canner. The most important step is to sear meat to a crispy brown on all sides to seal in natural juices. To readily brown meat without sticking, heat canner, add oil, and brown meat well, (see page 15).

Meat recipes are cooked at 15 pounds pressure.

Many factors determine the length of cooking time for meats. So, it is possible to give only general rules for required cooking time. Cooking time depends on the amount and distribution of fat and bone, toughness, size and thickness of cut, grade and cut of meat, and the manner in which the meat fits into the canner. Rolled roasts require a longer cooking time per pound than roasts with bone. Short, chunky roasts take longer to cook than long, flat roasts. Because of the difference in thickness, a small, thick roast requires a longer cooking time per pound than a heavier, flat roast.

During cooking, if excess liquid is lost, meat may burn. Liquid may be lost due to: (1) Failure to add sufficient water; (2) Failure to close cover immediately after adding water; (3) Leakage from worn sealing ring; (4) Cooking with pressure regulator rocking violently.

After pressure cooking time is completed, serving size pieces
of meat may be quick cooled. However, when cooking a roast cut of meat, pressure must drop of its own accord to be sure that pressure is reduced both within the roast and the canner.

After cooking, if more crispiness is desired, place meat under a broiler 1 to 3 minutes. If gravy is desired, stir 2 to 4 tablespoons of flour or cornstarch into \( \frac{1}{2} \) cup cold water. Heat liquid in canner and stir in flour mixture. Heat to boiling, stir constantly for 1 minute or until thickened. Season with salt and pepper.

**COOKING MEAT**

The recipes in this section were written for fresh or completely thawed meats. If you wish to use frozen meats, thaw half an hour or more, just enough so that the meat will have contact with the bottom of the canner and sear crispy brown. Then increase the cooking times given in the recipes. Frozen beef, veal, and lamb should be cooked 25 minutes per pound — frozen pork, 30 minutes per pound.

**DO NOT FILL CANNER OVER TWO-THIRDS FULL!**

**COOKING RECIPES: MEAT**

**POT ROAST**

<table>
<thead>
<tr>
<th>9 lbs. beef shoulder or rump roast</th>
<th>4 tablespoons cooking oil</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salt and pepper</td>
<td>2 cups water</td>
</tr>
</tbody>
</table>

Heat canner, add oil, and brown meat well on all sides. Place cooking rack and meat in canner. Season roast with salt, pepper, and onion; add water. Close cover securely. Place pressure regulator on vent pipe and COOK 45 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 15-18 servings.

**ITALIAN POTTED BEEF**

<table>
<thead>
<tr>
<th>9 lbs. rump or chuck roast</th>
<th>1 tablespoon salt</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 tablespoons cooking oil</td>
<td>2 cups sliced mushrooms</td>
</tr>
<tr>
<td>3 onions, chopped</td>
<td>6-ounce cans tomato paste</td>
</tr>
<tr>
<td>2 cups diced celery</td>
<td>2 ( \frac{1}{2} )-ounce cans beef broth</td>
</tr>
<tr>
<td>3 carrots, chopped</td>
<td>1( \frac{1}{2} ) cups red wine</td>
</tr>
<tr>
<td>3 bay leaves</td>
<td></td>
</tr>
</tbody>
</table>

Heat canner, add oil, and brown roast on all sides. Add prepared vegetables and seasonings. Blend tomato paste with broth and wine. Pour over meat. Close cover securely. Place pressure regulator on vent pipe and COOK 35 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. Thicken gravy, if desired. 15-18 servings.

**BRAISED BEEF**

<table>
<thead>
<tr>
<th>6 slices salt pork</th>
<th>3 cups water</th>
</tr>
</thead>
<tbody>
<tr>
<td>9 lbs. boneless beef, round or rump roast</td>
<td>1 cup diced turnips</td>
</tr>
<tr>
<td>Salt and pepper</td>
<td>1 cup diced carrots</td>
</tr>
<tr>
<td>Flour</td>
<td>3 onions, chopped</td>
</tr>
<tr>
<td></td>
<td>1 cup chopped celery</td>
</tr>
</tbody>
</table>

Heat canner and brown salt pork. Season roast with salt and pepper; dredge in flour. Brown roast well on all sides. Add water and vegetables. Close cover securely. Place pressure regulator on vent pipe and COOK 40 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 15-18 servings.

**SWISS STEAK**

<table>
<thead>
<tr>
<th>12 lbs. round steak, 1 inch thick cut into serving pieces</th>
<th>4 tablespoons cooking oil</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 cup flour</td>
<td>2 onions, chopped</td>
</tr>
<tr>
<td>Salt and pepper</td>
<td>1 green pepper, chopped</td>
</tr>
<tr>
<td></td>
<td>4 cups tomato juice</td>
</tr>
</tbody>
</table>

Season flour with salt and pepper; pound flour into meat. Heat canner, add oil, and brown meat on both sides. Add remaining ingredients. Close cover securely. Place pressure regulator on vent pipe and COOK 15 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 24 servings.

**SHORT RIBS OF BEEF**

<table>
<thead>
<tr>
<th>10 lbs. beef short ribs, cut into serving pieces</th>
<th>1 green pepper, chopped</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 tablespoons cooking oil</td>
<td>2 cups tomatoes</td>
</tr>
<tr>
<td>3 onions, chopped</td>
<td>2 tablespoons salt</td>
</tr>
<tr>
<td>1 cup chopped celery</td>
<td>1 teaspoon pepper</td>
</tr>
</tbody>
</table>

Heat canner, add oil, and brown ribs on all sides. Add remaining ingredients. Close cover securely. Place pressure regulator on vent pipe and COOK 40 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 15-18 servings.

**CORNED BEEF**

<table>
<thead>
<tr>
<th>12 lbs. corned beef</th>
<th>3 cloves garlic</th>
</tr>
</thead>
<tbody>
<tr>
<td>4 cups water</td>
<td>3 bay leaves</td>
</tr>
</tbody>
</table>

Cut garlic cloves in small pieces and insert in beef with a sharp knife. Place meat and water in canner. Add bay leaves. Close cover securely. Place pressure regulator on vent pipe and COOK 40-50 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 20-24 servings.

**OXTAIL WITH HERBS**

<table>
<thead>
<tr>
<th>8 lbs. oxtails, cut into serving pieces</th>
<th>2 teaspoons marjoram</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 tablespoons cooking oil</td>
<td>2 teaspoons basil</td>
</tr>
<tr>
<td>4 onions, thinly sliced</td>
<td>2 teaspoons thyme</td>
</tr>
<tr>
<td>Salt and pepper</td>
<td>8 cups tomato juice</td>
</tr>
</tbody>
</table>

Heat canner, add oil, and brown oxtails well on all sides. Add onion and sauté. Add remaining ingredients. Close cover securely. Place pressure regulator on vent pipe and COOK 40 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 15-18 servings.

**HAM—BOILED**

| 12 lbs. ham                                      | 6 cups water              |

Place ham and water in canner. Close cover securely. Place pressure regulator on vent pipe and COOK 70 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 20-24 servings.

**VIRGINIA HAM**

<table>
<thead>
<tr>
<th>10 lbs. ham</th>
<th>1( \frac{1}{2} ) cups brown sugar</th>
</tr>
</thead>
<tbody>
<tr>
<td>4 cups water</td>
<td>Cloves</td>
</tr>
</tbody>
</table>

**HAM SLICES**

<table>
<thead>
<tr>
<th>4 tablespoons cooking oil</th>
<th>Cloves, if desired</th>
</tr>
</thead>
<tbody>
<tr>
<td>4 slices ham, 1( \frac{1}{2} ) inches thick</td>
<td>2 cups water</td>
</tr>
</tbody>
</table>

Heat canner, add oil, and sear ham on all sides. Stud ham with cloves, if desired. Place cooking rack, ham, and water in canner. Close cover securely. Place pressure regulator on vent pipe and COOK 25 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 12-15 servings.

**PORK ROAST**

<table>
<thead>
<tr>
<th>6 lbs. pork roast</th>
<th>2 onions, sliced</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 tablespoons cooking oil</td>
<td>3 cups water</td>
</tr>
<tr>
<td>Salt and pepper</td>
<td></td>
</tr>
</tbody>
</table>

Heat canner, add oil, and brown roast well on all sides. Season with salt, pepper, and sliced onion; add water. Close cover securely. Place pressure regulator on vent pipe and COOK 60 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 12-15 servings.

**LEMON PORK CHOPS**

<table>
<thead>
<tr>
<th>20 pork chops, ( \frac{1}{2} ) inch thick</th>
<th>1 tablespoon salt</th>
</tr>
</thead>
<tbody>
<tr>
<td>( \frac{1}{2} ) cup cooking oil</td>
<td>1 teaspoon pepper</td>
</tr>
<tr>
<td>20 lemon slices</td>
<td>2 cups catsup</td>
</tr>
<tr>
<td>4 onions, cut into rings</td>
<td>2 cups water</td>
</tr>
</tbody>
</table>

Heat canner, add oil, and brown pork chops on both sides. Top each chop with a lemon slice. Add onion, salt, and pepper. Combine catsup and water; pour over chops. Close cover securely. Place pressure regulator on vent pipe and COOK 10 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. Serve chops with the sauce. 20 servings.
SPARERIBS WITH BARBECUE SAUCE

Season spareribs with salt, pepper, and paprika. Heat canner, add oil, and brown ribs on all sides. Add onion. Combine catsup, vinegar, Worcestershire sauce, chili powder, and celery seed; pour over meat in canner. Close cover securely. Place pressure regulator on vent pipe and COOK 15 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 12-15 servings.

LEG OF LAMB

Heat canner, add oil, and brown lamb. Add salt, pepper, garlic, and water. Close cover securely. Place pressure regulator on vent pipe and COOK 50 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 20-24 servings.

CHINESE PINEAPPLE LAMB

VEAL ROAST

Season meat and dredge with flour. Heat canner, add oil, and brown meat well on all sides. Place cooking rack and roast in canner. Add bay leaves and water. Close cover securely. Place pressure regulator on vent pipe and COOK 45 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 15-18 servings.

GOURMET VEAL STEAK

Heat canner, add oil, and brown meat. Sprinkle with salt and pepper; top with lemon slices. Add bouillon cubes dissolved in boiling water and wine. Close cover securely. Place pressure regulator on vent pipe and COOK 45 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 24 servings.

BRAISED VEAL

Heat canner, add oil, and brown meat well on all sides. Place cooking rack and roast in canner. Add onion, seasonings, and water. Close cover securely. Place pressure regulator on vent pipe and COOK 45 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 15-18 servings.

Heat canner, add oil, and brown chops on both sides. Combine seasonings, brown sugar, lemon juice, onion, and water. Pour over meat. Sprinkle olives over top. Close cover securely. Place pressure regulator on vent pipe and COOK 15 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. Remove meat, thicken gravy, if desired. 18 servings.

Try these suggested entrees. Then experiment with entrees of your own. Entree recipes are cooked at 15 pounds pressure. Always remember to select foods that cook in the same length of time. Favorite recipes may be adjusted to Pressure Cooking by following the general directions for the particular type of food being cooked. Decrease the length of cooking time by two-thirds, since Pressure Cooking requires only one-third as much time as ordinary methods of cooking. Decrease the amount of liquid as there is little evaporation from the canner. Add about 2 cups more liquid than desired in the finished product.

DO NOT FILL CANNER OVER TWO-THIRDS FULL!
**BEEF STEW**

| 3 tablespoons cooking oil | 12 potatoes, halved |
| 4 lbs. beef, cut into | 3 cups green beans |
| 1 inch cubes | 12 carrots, halved |
| 4 onions, sliced | 3 cups tomatoes |
| Salt and pepper | 3 tablespoons flour |
| 2 cups water | ¼ cup water |

Heat canner, add oil, and brown meat. Add onion, salt, pepper, water, potatoes, green beans, carrots, and tomatoes. Close cover securely. Place pressure regulator on vent pipe and COOK 8 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. Make a paste of flour and ¼ cup water and stir into stew to thicken. 15-18 servings.

**CHILI CON CARNE**

| 3 tablespoons cooking oil | 16-ounce cans kidney beans, drained and rinsed | 6 lbs. ground beef |
| 4 onions, chopped | 2 tablespoons salt |
| 2 green peppers, chopped | ¼ teaspoon cayenne pepper | 2 cloves garlic, minced |
| 1 16-ounce can tomato sauce | 2 tablespoons chili powder |
| 3 16-ounce cans tomatoes | 1 cup water |

Heat canner. Add oil and brown beef, breaking it apart to assure even browning. Add onions, green pepper, garlic and brown lightly. Add remaining ingredients. Close cover securely. Place pressure regulator on vent pipe and COOK 15 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 18-20 servings.

**PORK CHOPS WITH VEGETABLES**

| 3 tablespoons cooking oil | 2 cups water | 15 pork chops, ¾ inch thick |
| Salt and pepper | 15 potatoes |
| | 15 carrots |

Heat canner, add oil, and brown pork chops on both sides. Season with salt and pepper. Add water, potatoes, and carrots. Close cover securely. Place pressure regulator on vent pipe and COOK 10 to 12 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 12 servings.

**SPARERIBS AND SAUERKRAUT**

| 6 lbs. spareribs, cut into | 3 quarts sauerkraut | 3 tablespoons cooking oil |
| serving pieces | 3 tablespoons brown sugar | Salt and pepper |
| 2 cups water | | |

Heat canner, add oil, and brown ribs on both sides. Season with salt and pepper. Place sauerkraut over ribs and sprinkle with brown sugar. Add water, carrots, and potatoes. Close cover securely. Place pressure regulator on vent pipe and COOK 15 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 12 servings.

**LIMA BEANS WITH BACON**

| 6 cups dried lima beans | 1 lb. bacon, diced |
| ¾ cup cooking oil | 2 teaspoons salt |
| 3 tablespoons salt | Water |

**LAMB STEW**

| 3 tablespoons cooking oil | 8 onions, diced | 6 lbs. breast of lamb, cut into 1 inch cubes |
| Salt and pepper | 2 tablespoons Worcestershire sauce | 12 carrots, cut in half |
| 3 green peppers, diced | 2 cups water | |

Heat canner, add oil, and brown lamb well on all sides. Season with salt and pepper. Add green pepper, onion, Worcestershire sauce, carrots, and water. Close cover securely. Place pressure regulator on vent pipe and COOK 8 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 12 servings.

**BOSTON BAKED BEANS**

| 6 cups dried beans | 1 tablespoon salt |
| ¾ cup cooking oil | 2 teaspoons dry mustard |
| 3 tablespoons salt | 1 cup molasses |
| Water | 1 cup catsup |
| 1 lb. salt pork or bacon, diced | 4 onions, diced |
| ½ cup brown sugar | Water |

**CHOP SUEY**

| 3 tablespoons cooking oil | ½ cup soy sauce | 3 lbs. round steak, cubed |
| 1 lb. lean pork, cubed | 3 cups diced celery | 1 lb. lean veal, cubed |
| 16-ounce cans Chinese vegetables | 3 16-ounce cans bean sprouts |
| 3 onions, chopped | 2 cups water |

**NEW ENGLAND BOILED DINNER**

| 4 lbs. ham shank | 12 carrots, halved |
| 4 cups water | 1 cabbage, cut in wedges |
| 12 potatoes, halved | 1 teaspoon pepper |
| 12 onions, halved | |

Place ham and water in canner. Close cover securely. Place pressure regulator on vent pipe and COOK 20 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. Add vegetables and pepper. Close cover securely. Place pressure regulator on vent pipe and COOK 8 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 12 servings.

**SHRIMP JAMBALAYA**

| 3 tablespoons cooking oil | 1 cup water | 2 cloves garlic |
| 2 cups chopped onion | 3-1 lb. cans tomatoes | 2 lbs. precooked ham, diced |
| 3 cups uncooked rice | 6-ounce cans sliced mushrooms, with liquid |
| 2 tablespoons salt | 3 lbs. peeled and cleaned shrimp |
| ⅛ teaspoon pepper | 2 green peppers, cut into strips |
| ⅛ teaspoon allspice | | |

Finch each, cayenne, chili powder, and basil

Heat canner, add oil, and sauté garlic and onion until golden brown. Stir in ham and rice. Cook until rice is golden. Remove garlic. Add seasonings, water, tomatoes, and mushrooms with liquid; mix well. Add shrimp and sprinkle green pepper strips over all. Close cover securely. Place pressure regulator on vent pipe and COOK 5 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. Remove cover and stir. Let stand 5 minutes before serving. 15-18 servings.
Pressure Cooking Poultry

Poultry recipes are cooked at 15 pounds pressure. Try the following suggested recipes and enjoy tasty poultry in a variety of sauces. Or, prepare your own favorite poultry dishes. When you wish to seal the natural juices into the poultry, sear to a crispy brown prior to pressure cooking. When it is desirable to intermingle food flavors, during cooking, it is best not to brown poultry; just cook it in the liquid indicated in the recipe.

DO NOT FILL CANNER OVER TWO-THIRDS FULL!

COOKING RECIPES: POULTRY

BRAISED WHOLE CHICKEN

3 3-lb. chickens
3 tablespoons cooking oil
Salt and pepper
2 cups water

Stuff chickens, if desired. Remove neck bone, fold skin down on breast and skewer in position. Fasten legs and wings close to side of body. Heat canner, add oil, and brown chickens on all sides. Season with salt and pepper. Place water, cooking rack, and chickens in canner. Close cover securely. Place pressure regulator on vent pipe and COOK 10 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 15-18 servings.

CHICKEN IMPERIAL

9 lbs. chicken, cut into serving pieces
1/2 cup cooking oil
2 tablespoons salt
1 teaspoon pepper
1/2 cup minced onion
1 cup slivered almonds
4 onions, chopped
2 chicken bouillon cubes
1 cup white wine

Heat canner, add oil, and brown chicken. Season with salt and pepper. Add onions, almonds, mushrooms with liquid, bouillon cubes dissolved in hot water, and wine. Close cover securely. Place pressure regulator on vent pipe and COOK 10 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. Remove chicken from canner, thicken gravy. If desired, serve chicken on bed of hot rice, top with gravy and toasted almonds. 15-18 servings.

CHICKEN AND DUMPLINGS

9 lbs. chicken, cut into serving pieces
3 cups canned or fresh tomatoes
2 tablespoons salt
1 teaspoon pepper
3 cups flour
1/2 cup milk
1/2 cup cooking oil
1 tablespoon parsley flakes
2 eggs

Place all ingredients in canner. Close cover securely. Place pressure regulator on vent pipe and COOK 5 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. Prepare dumplings as follows.

Dumplings

2 cups flour
1/2 cup milk
1 teaspoon salt
1 tablespoon baking powder
2 eggs

Sift flour, salt, and baking powder. Beat eggs; add milk, oil, and parsley. Combine liquid and dry ingredients. Drop from teaspoon into hot chicken broth. Simmer without cover for 15 minutes. Thicken broth if desired. 15-18 servings.

CHICKEN MARENGO

9 lbs. chicken, quartered
1 tablespoon coarse black pepper
1 cup flour
2 tablespoons salt
1/2 cup cooking oil
2 cloves garlic
4 3-ounce cans sliced mushrooms, drained (or 1 lb. mushrooms, sliced)
4 16-ounce cans tomatoes
2 cups dry white wine

CORNISH HENS IN WHITE WINE

4 tablespoons cooking oil
8 cornish hens
2 teaspoons salt
1 teaspoon pepper
1/2 cups white cooking wine

Heat canner, add oil, and brown hens. Season with salt and pepper. Combine remaining ingredients and pour over hens. Close cover securely. Place pressure regulator on vent pipe and COOK 5 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 8-12 servings.

HUNTER’S TURKEY

9 lbs. turkey, cut into serving pieces
1/2 cup cooking oil
3 onions, chopped
4 8-ounce cans tomato sauce

Remove as much fat as possible from duck. Season with salt and pepper. Heat canner, add oil, and brown duck. Pour off excess drippings. Combine cooking wine and orange rind. Pour over duck. Close cover securely. Place pressure regulator on vent pipe and COOK 12 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 15-18 servings.

FLORIDA DUCK

9 lbs. duck, cut into serving pieces
2 cups white cooking wine
1/2 cup orange juice (or 4-ounce cans orange flan)
1 tablespoon Worcestershire sauce
Salt and pepper
1 tablespoon cooking oil

Remove neck bone, fold skin down on breast and skewer in position. Fasten legs and wings close to side of body. Heat canner, add oil, and brown duck. Season with salt and pepper. Add onion, tomato sauce, bay leaf, thyme, marjoram, and Worcestershire sauce. Close cover securely. Place pressure regulator on vent pipe and COOK 12 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 8-12 servings.

Pressure Cooking Soups

Make old-fashioned, homemade soups the easy way in your canner. If you wish to prepare your family’s favorite soup, use the following recipes as guides. Soup recipes are cooked at 15 pounds pressure.

Do not pressure cook soups containing barley, rice, noodles, macaroni products, split peas, or soup mixes with dried vegetables because they have a tendency to foam, froth, and sputter and could clog the vent pipe. See page 15.

The canner quickly transfers natural flavor and nutrients from the meat into the broth. Prepare either the Brown Beef Soup Stock or the Chicken Soup Stock according to the recipe. Remove the pieces of meat. If desired, cut into small pieces and use in soup recipes. Strain through several layers of cheese cloth. Once the stock is prepared, serve it as a consommé or use it to prepare delicious soups.

FOR SOUP RECIPES DO NOT FILL CANNER OVER ONE-HALF FULL!

COOKING RECIPES: SOUP

VEGETABLE SOUP

4 lbs. soup meat
2 quarts water
6 carrots, diced
6 potatoes, diced
2 cups canned lima beans
4 cups canned or fresh tomatoes
1 cup diced celery
4 onions, sliced
1 tablespoon salt

Place all ingredients in canner. Close cover securely. Place pressure regulator on vent pipe and COOK 20 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 12-15 servings.
CHICKEN SOUP STOCK
4 lbs. chicken, cut into serving pieces
4 quarts water
1 cup diced celery
1 cup diced carrots
2 onions, chopped
1 tablespoon salt

NAVY BEAN SOUP
4 cups dried navy beans
3 lbs. ham bone or shank
2 cups vegetable oil
3/4 cup minced green pepper
2 tablespoons salt
2 cups tomato sauce
1 1/2 cups celery, sliced
1 tablespoon salt
1/4 cup milk
1 1/2 cups water

Soak beans overnight in vegetable oil, salt, and water to cover completely. Drain and discard liquid. Place beans and all remaining ingredients in canner. Close cover securely. Place pressure regulator on vent pipe and COOK 30 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 12-15 servings.

CLAM CHOWDER
1 1/2 lb. salt pork, cubed
6 cups water
4 onions, minced
12 cups diced potatoes
4 cups corn
2 tablespoons parsley flakes
1 teaspoon salt
1/2 cup butter
1 bay leaf
1 cup chopped celery
1 cup diced carrots

Heat canner and brown salt pork. Add vegetables, water, salt, and pepper. Close cover securely. Place pressure regulator on vent pipe and COOK 5 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. Add clams and boil, without cover, for 2 minutes. (Additional cooking will toughen clams.) Add milk and butter. 16 servings.

BROWN BEEF SOUP STOCK
3 tablespoons cooking oil
4 lbs. beef, cubed
3 quarts water
1 cup sliced onion
1 cup diced carrots
1 cup chopped celery
1 onion, chopped
1 1/2 cups quarts water
1 tablespoon salt

Pressure Cooking Desserts
Your canner offers a shortened method for preparing steamed breads and desserts. Actually the cooking time can be counted in minutes instead of hours. You will find, too, that your canner is easier to use than the ordinary steamer because its pressure regulator acts as a means of measurement to assure constant heat to produce uniform even-textured products. Consult specific recipes for cooking pressure.

Best results are obtained when 1 to 1 1/2 quart molds are used. Any type of mold is satisfactory (metal, glass, earthenware, tin food cans). Remember, never fill molds over two-thirds full; this extra top-space is to allow ample space for rising. If molds used do not have a cover, aluminum foil or several thicknesses of wax paper should be tied securely over the top to prevent condensed moisture from falling into mold. Because the first part of the cooking period is steaming time, which permits foods to rise, at least three quarts water should be poured into the bottom of canner to allow for evaporation.

Adjust heat to allow a moderate flow of steam from the vent pipe.

DO NOT FILL CANNER OVER TWO-THIRDS FULL!

COOKING RECIPES: DESSERTS

BROWN BETTY
2 cups dry bread crumbs
1/2 cup sugar
1 teaspoon cinnamon
1 lemon, juice and rind
9 apples, peeled, cored and sliced
1/2 cup melted butter

Combine crumbs, sugar, cinnamon, lemon juice, and grated rind. Place alternate layers of apples and crumb mixture in buttered bowl that may be set loosely in canner. Pour melted butter over top. Cover firmly with aluminum foil. Place water, cooking rack, and bowl in canner. Close cover securely. Place pressure regulator on vent pipe and COOK 20 MINUTES at 15 pounds pressure. Let pressure drop of its own accord. 12 servings.

CUSTARD
6 cups milk
6 eggs, beaten
1 cup sugar
1 1/2 teaspoons vanilla
1/2 cup water

Chocolate Custard: Scald milk with 3 squares chocolate, grated. Follow vanilla custard directions.

Coconut Custard: Sprinkle 3 tablespoons coconut over top of each vanilla custard before cooking.

ENGLISH PLUM PUDDING
1 cup sifted all purpose flour
1 teaspoon baking powder
1/2 teaspoon salt
1/2 teaspoon allspice
1/2 teaspoon cinnamon
1/2 teaspoon nutmeg
1/2 teaspoon ground cloves
1/2 cup raisins
1 cup milk
1 teaspoon salt
2 tablespoons butter

Sift flour with baking powder, salt, and spices. Add fruits and nuts. Beat egg; add sugar, suet, and milk. Combine liquid and dry ingredients; mix well. Pour into buttered 1 quart mold. Cover mold firmly with aluminum foil. Place water, cooking rack, and mold in canner. Close cover securely. Allow steam to flow from vent pipe 20 minutes. Place pressure regulator on vent pipe and cook 50 minutes at 10 pounds pressure. Let pressure drop of its own accord.

BREAD PUDDING
4 cups cubed dry bread
3 cups hot milk
1 1/2 teaspoons salt
1 cup brown sugar
1 teaspoon cinnamon
2 tablespoons butter
1 egg
1 teaspoon baking powder

Combine bread, hot milk, salt, brown sugar, cinnamon, butter, raisins, nuts, eggs, and vanilla. Turn into a buttered bowl that may be set loosely in canner. Cover bowl firmly with aluminum foil. Place water, cooking rack, and bowl in canner. Close cover securely. Allow steam to flow from vent pipe 20 minutes. Place pressure regulator on vent pipe and cook 50 minutes at 10 pounds pressure. Let pressure drop of its own accord.

RICE PUDDING
1 quart milk
4 eggs, slightly beaten
1 1/2 cups sugar
1 teaspoon salt
4 cups cooked rice
1 teaspoon vanilla
2 cups water

Fruit and Nut Rice Pudding: Substitute brown sugar for white and add 1 cup raisins or dates and 1 cup walnuts to above recipe.
BROWN BREAD

2 cups graham flour  1 1/2 cups light molasses
2 cups corn meal  4 cups milk, sweet or sour
2 cups rye meal  2 cups raisins
2 teaspoons salt  3 quarts water
2 teaspoons soda

WHITE FRUIT CAKE

1/4 cups canned pineapple tidbits  1/2 cup shredded coconut
1/2 cup chopped citron  1/2 cup flour
1/4 cup chopped lemon peel  1 cup shortening
1/4 cup chopped candied cherries  1 cup sugar
5 eggs  1/2 cups flour
1/2 cup chopped dates  1 teaspoon salt
1 cup chopped dried apricots  1/2 teaspoons baking powder
1/2 cup chopped figs  1/4 cup pineapple juice
1 1/2 cups white raisins  3 quarts water

Drain pineapple, saving juice. Dredge fruits and nuts with 1/4 cup flour. Cream shortening and sugar. Add eggs, one at a time, beating mixture well after each addition. Sift flour, salt, and baking powder. Add alternately with pineapple juice. Pour over floured fruit and nuts; mix until well blended. Pour into 5 buttered molds (pint size). Cover firmly with aluminum foil. Place water, cooking rack, and molds in canner. Close cover securely. Allow steam to flow from vent pipe 20 minutes. Place pressure regulator on vent pipe and COOK 60 MINUTES at 10 pounds pressure. Let pressure drop of its own accord.

Helpful Hints for Pressure Cooking

- Your favorite recipes may be adjusted for cooking in the canner by following the general directions in this book for the particular type of food being cooked. Decrease the length of cooking time by two thirds, since pressure cooking requires only one-third as much time as ordinary methods of cooking. Because there is little evaporation from the canner, the amount of liquid should be decreased. Add about 2 cups more liquid than desired in the finished product. There must always be water or some other liquid in the bottom of the canner to form the necessary steam.
- Use the cooking rack when it is desirable to cook foods out of the cooking liquid.
- When the body of your canner is heated, the metal expands. Therefore, it may be difficult to close cover on heated body. When this happens, allow canner to cool slightly.
- Foods are quickly cooked in the canner. Therefore, to prevent overcooking it is important to accurately time the cooking period.
- If your cooked food has more liquid than you desire, simmer to evaporate excess liquid. You may wish to use 1 or 2 tablespoons less liquid the next time you prepare the recipe.
- When pressure cooking at high altitudes, cooking time should be increased 5% for every 1000 feet above the first 2000 feet. Following this rule, the time would be increased as follows:

<table>
<thead>
<tr>
<th>Elevation (feet)</th>
<th>Pressure Cooking Time Increase (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>3000</td>
<td>5%</td>
</tr>
<tr>
<td>4000</td>
<td>10%</td>
</tr>
<tr>
<td>5000</td>
<td>15%</td>
</tr>
<tr>
<td>7000</td>
<td>20%</td>
</tr>
<tr>
<td>8000</td>
<td>25%</td>
</tr>
<tr>
<td>9000</td>
<td>30%</td>
</tr>
</tbody>
</table>

If you have questions on recipes or timetables write to: Home Economics Department, National Presto Industries, Inc., 3925 North Hastings Way, Eau Claire, Wisconsin 54703-3703, phone 1-800-368-2194 (e-mail: contact@GoPresto.com). Inquiries will be answered promptly by letter, phone, or email.

Service and Parts Information

If you have any questions regarding the operation of your Presto® canner or need parts for your canner, call our Consumer Service Department weekdays between 8:00 AM and 4:30 PM (Central Time) at 715-839-2209 or write:

NATIONAL PRESTO INDUSTRIES, INC.
Consumer Service Department
3925 North Hastings Way, Eau Claire, Wisconsin 54703-3703

You may also e-mail inquiries to contact@GoPresto.com. Inquiries will be answered promptly by telephone, letter or email. When writing, please include a phone number and a time when you can be reached during weekdays if possible.

When ordering replacement parts, please specify the model number found stamped on the side of the canner body.

Any maintenance required for this canner, other than that described in the Care and Maintenance section of this book (pages 6-7), should be performed by our Factory Service Department. Be sure to indicate date of purchase and a description of the problem when sending a canner for repair. Send canners for repair to:

CANTON SALES AND STORAGE
Presto Factory Service Department
555 Matthews Drive, Canton, MS 39046-0529

The Presto Factory Service Department is equipped to service all PRESTO® appliances and supply genuine PRESTO® parts. Genuine PRESTO® replacement parts are manufactured to the same exacting quality standards as PRESTO® canners and are engineered specifically to function properly with its canners. Presto can only guarantee the quality and performance of genuine PRESTO® parts. “Look-alikes” might not be of the same quality or function in the same manner. To ensure that you are buying genuine PRESTO® replacement parts, look for the PRESTO® trademark.

PRESTO® canner replacement parts are available at Presto Authorized Service Stations and may also be available at hardware stores and other retail outlets. Parts may also be ordered on-line at www.GoPresto.com.

In California, canners in need of service may be delivered to your nearest Presto Authorized Service Station. California residents seeking warranty or service information may call 1-800-877-0441.
