Package Contents

- eqo Booster
- eqo Inside Antenna
- eqo Outside Antenna
- 25' Coax Cable
- 6' Coax Cable
- Power Supply

This device may be operated ONLY in a fixed location for in-building use. The signal booster unit is designed for use in an indoor, temperature controlled environment ( < 100 degrees Fahrenheit)
Accurately measuring cell signal strength

Find The dBm Reading On Your Phone

**iPhone®**
Dial *3001#12345#* then press Call.
Hold down power button until you see “Slide to Power Off” then release the power button.
Hold the Home button until your main screen appears.
If you want to check 3G/1x but your iPhone is picking up 4G/LTE signal, go to Settings> Cellular> Cellular Data Options> Enable LTE> Select Off
After you system is set up, you can go back to the dots signal ready by once again dialing *3001#12345#* then pressing call.
When the menu comes back up, tap “phone” in the top left corner of your phone

**Android™**
Settings > About Phone > Status or Network > Signal Strength or Network Type and Strength (exact options/wording depends on phone model).

iPhone is aregistered trademark of Apple Inc. Android is a trademark of Google Inc.

**All Other Phones & Alternate Methods**
- [https://www.weboost.com/test-mode-instructions/](https://www.weboost.com/test-mode-instructions/)

**All Phones:**
- Keep track of the network (3G or 4G) phone is connected to.
- Any signal readings you take are valid for that phone’s carrier. To get readings from other carriers, you’ll need phones from each carrier.

**NEED HELP?**
[ support.weboost.com](mailto:support.weboost.com)  📞 866.294.1660
**Step 1: Place Booster In Strong Signal Location On or Near Window Sill**

**IMPORTANT:** This is the most critical step of the installation process because it will determine the overall performance of the Booster system. **Do not connect the Booster to power until STEP 4.**

![Cell Phone Signal Booster Icon]

**Step 1:** Place Booster In Strong Signal Location On or Near Window Sill

1. **Turn off your cell phone’s WiFi to ensure you are checking the cellular connection.** The dBm reading will be refreshed every 30-60 seconds.

2. **Want faster results? Once you have a reading, turn on airplane mode.** Wait 15 seconds. Turn off airplane mode. The signal strength reading is refreshed.

3. **Walk around your home/office taking signal strength readings until you find the window that has the best reception.**

4. **Place your Booster in the area with the strongest cell phone signal.** The LED light, and weBoost logo should be facing into the room. Note this will need to connect to the Inside Antenna (Step 5) with the 25’ Cable.

Having an accurate measurement of signal strength in decibels (dBm) is crucial when installing your system. Decibels accurately measure the signal strength you are receiving.

*May Need External Antenna

If you're not able to get a strong cell signal, try using an app like Open Signal to find the side of your house closest to a cell phone tower and install the booster on that side of the house.
**Step 2:** Connect the 6’ Cable to the Booster Unit Port Labeled “Outside Antenna”

![Diagram showing step 2]

**Step 3:** Outside Antenna

1. Connect the Outside Antenna to the 6’ Cable (from Step 2)

2. Open window, place Outside Antenna between window and window screen with the weBoost logo facing inside
• If your window does not open, skip steps 2 & 3.
• If this is the case, it is important to have the Booster (Step 1) in the window sill with the weBoost logo facing inside the house.
• If you don’t have a screen to hold the outside antenna, use the included double-sided adhesive to stick the antenna against the window.
• For areas in full basements, place outside antenna as high on the window as possible.

PLEASE NOTE: If your window does not have Low-E glass, it is best to use the booster without the outside antenna. Most new windows use Low-E glass. If you’re unsure, test results both with and without using the outside antenna. Just remember to disconnect the outside antenna cable from the booster if you’re not using the outside antenna.

**Step 4:** Connect 25’ Cable to Booster Unit Port Labeled “Antenna”
**Step 5:** Place Inside Antenna In Weak Signal Location and Connect to 25’ Cable

**IMPORTANT:** The further apart the Antenna is located from the Booster the better your coverage will be. To determine the best location for your Booster, note the dBm reading in a variety of locations.

The eqo Booster and Antenna should face the same direction 15 to 25 feet separation distance.

**NOTE:** You can mount the antenna on a wall by removing the soft cover.
Step 6: Connect The Booster to Power

1. Connect the Power Supply on the side of the Booster.

2. Plug the Booster in. The light may change colors for the first 15 seconds. Check your coverage area. Refer to TROUBLESHOOTING section if needed.
Troubleshooting

Fixing Red Light Issues

This section is only applicable if the Booster light is red and you are not experiencing the desired signal boost. After each step, always un-plug and re-plug the power supply so the Booster can update the signal reading.

1. Unplug the Booster’s power supply from the power strip.
2. Verify the Booster faces in the same direction as the Antenna.
3. Make sure all coax connections are finger-tight.
4. Move the Booster and Antenna further from each other.
5. Plug power supply back into power strip.
6. Monitor the indicator lights on your Booster. If, after 15 seconds of ‘power on’ a red light appears, repeat above ‘Troubleshooting’ steps 1-5. Note: Parallel separation of the Booster and Antenna typically requires a shorter separation distance than perpendicular separation. If possible, try placing the Antenna directly in front of the location of the Booster. A combination of vertical and horizontal separation distance also works to increase system gain.
7. If you are having any difficulties while testing or installing your Booster, contact our weBoost Customer Support team for assistance at support.weboost.com or contact 866.294.1660.

Fixing Orange Lights Issues

This section is only applicable if the Booster light is orange and you are not experiencing the desired signal boost. Orange light indicates there is a cell tower close by.

1. Unplug the Booster’s power supply from the power strip.
2. Redirect the Booster to point in another direction. Typically, we recommend turning the Booster 5-10 degrees at a time.
3. Plug power supply back into power strip.
4. Monitor the indicator lights on your Booster. If, after 15 seconds of ‘power on’, a solid orange light appears, repeat above ‘Fixing Orange Lights Issues’ steps 1-3.
5. If the solid orange light persists, and you are not experiencing the desired
signal boost, more advanced troubleshooting may be necessary through weBoost Customer Support at support.weboost.com or contact 866.294.1660.

Light Off

If the eqo Booster’s light is off, verify your surge protected power strip has power. Note: The eqo Booster can be reset by un-plugging and re-plugging the power supply from the power strip.

Green Light, But Poor Coverage

After each step, always un-plug and re-plug the power supply so the Booster can update the signal reading. Always un-plug and re-plug from a power strip NEVER from the Booster.

1. Increase separation between Antenna and Booster. Un-plug and re-plug power supply from power strip.
2. Rotate the Booster in small increments 5-10 degrees at a time. Un-plug and re-plug power supply from power strip each time.
3. Move the Booster to a different location. The stronger the signal at the Booster location, the better chance of improved coverage from the Antenna. Un-plug and re-plug power supply from power strip.
4. To determine what your signal is like before and after you power on the Booster, refer to STEP 1 on page 2 - Find The dBm Reading On Your Phone.

---

The term "IC" before the radio certification number only signifies that Industry Canada technical specifications were met. Each Signal Booster is individually tested and factory set to ensure FCC compliance. The Signal Booster cannot be adjusted without factory reprogramming or disabling the hardware. The Signal Booster will amplify, but not alter incoming and outgoing signals in order to increase coverage of authorized frequency bands only. If the Signal Booster is not in use for five minutes, it will reduce gain until a signal is detected. If a detected signal is too high in a frequency band, or if the Signal Booster detects an oscillation, the Signal Booster will automatically reduce the gain on that specific band.

The Manufacturer’s rated output power of this equipment is for single carrier operation. For situations when multiple carrier signals are present, the rating would have to be reduced by 3.5 dB, especially where the output signal is re-radiated and can cause interference to adjacent band users. This power reduction is to be by means of input power or gain reduction and not by an attenuator at the output of the device.
Safety Guidelines

⚠ Warnings

To uphold compliance with network protection standards, all active cellular devices must maintain at least six feet of separation distance from Inside Panel and Dome antennas and at least four feet of separation distance from desktop and eqo Antenna.

Use only the power supply provided in this package. Use of a non-weBoost product may damage your equipment.

The Signal Booster unit is designed for use in an indoor, temperature-controlled environment (less than 100 degrees Fahrenheit). It is not intended for use in attics or similar locations subject to temperatures in excess of that range.

RF Safety Warning: Any antenna used with this device must be located at least 8 inches from all persons.

AWS Warning: The Outside Antenna must be installed no higher than 31 feet 9 inches (10 meters) above ground.

This is a CONSUMER device.

BEFORE USE, you MUST REGISTER THIS DEVICE with your wireless provider and have your provider’s consent. Most wireless providers consent to the use of signal boosters. Some providers may not consent to the use of this device on their network. If you are unsure, contact your provider.

You MUST operate this device with approved antennas and cables as specified by the manufacturer. Antennas MUST be installed at least 20 cm (8 inches) from any person.

You MUST cease operating this device immediately if requested by the FCC or a licensed wireless service provider.

WARNING. 911 location information may not be provided or may be inaccurate for calls served using this device.

This device may be operated ONLY in a fixed location for in-building use.

This device complies with Part 15 of FCC rules. Operation is subject to two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. Changes or modifications not expressly approved by weBoost could void the authority to operate this equipment.

FOR MORE INFORMATION ON REGISTERING YOUR SIGNAL BOOSTER WITH YOUR WIRELESS PROVIDER, PLEASE SEE BELOW:

T-Mobile/MetroPCS: https://support.t-mobile.com/docs/DOC-9827
AT&T: https://securec45.securewebsession.com/attsignalbooster.com/
2 YEAR WARRANTY

weBoost Signal Boosters are warranted for two (2) years against defects in workmanship and/or materials. Warranty cases may be resolved by returning the product directly to the reseller with a dated proof of purchase.

Signal Boosters may also be returned directly to the manufacturer at the consumer’s expense, with a dated proof of purchase and a Returned Material Authorization (RMA) number supplied by weBoost. weBoost shall, at its option, either repair or replace the product.

This warranty does not apply to any Signal Boosters determined by weBoost to have been subjected to misuse, abuse, neglect, or mishandling that alters or damages physical or electronic properties.

Replacement products may include refurbished weBoost products that have been recertified to conform with product specifications.

RMA numbers may be obtained by contacting Customer Support.

DISCLAIMER: The information provided by weBoost is believed to be complete and accurate. However, no responsibility is assumed by weBoost for any business or personal losses arising from its use, or for any infringements of patents or other rights of third parties that may result from its use.
