WX1502 Alarm Clock Instructions

Missing accessories or any other problems, please contact us:

ThreeDucksDirect@outlook.com

For setting instruction by video, visit Youtube and search “WX1502 wireless clock”.

Important:
1. This clock doesn’t recommend to power by batteries because it can only last 2 days. Batteries method is only for testing purpose. We recommend to work with power cord for long time usage.
2. If you found the clock time only appears when you touch it. Don’t worry. It’s just because you’ve set it to sound control mode by mistake. Just follow section 3.5 – Sound Control to get it right. We provide 1-Year warranty for every customer.

Structure

Notice: Batteries are only for testing purpose. We don’t recommend to work with batteries.

1. Package Includes:
   1 x Alarm Clock
   1 x User Manual.
   1 x USB Cable.

2. Product Features:
   Input Voltage: AC110v-240V, 50/60HZ.
   Output Voltage: DC5V / 500MA-2100MA.
3. Setting:

3.1 Wireless charging:

1. Plug in the 5V2A power adapter with the clock. Adapter comes with the package. You can also use your 5V2A phone adapter instead. However, please understand DO NOT use 5V1A adapter because its power is not enough for wireless charging. (Needs 5V2A or above)
2. Place your wireless phone on the correct charging area. Make sure your phone case is NOT thicker than 5mm.

Compatible models:
- iPhone 8, iphone X and newer generations.
- Samsung Note9, S9, S9+, Note8, S8, S8+, S7 Edge, S7 and other newer generations.
- any other phones that support wireless charging may be compatible with.

2. Fahrenheit

   - 08:00
   - 70%RH
   - 80°F

   Celsius

   - 08:00
   - 70%RH
   - 22°C

### 3.7 Snooze Setting:

1. When alarm rings, press any button to get snooze for 5 mins.
2. You can repeat the same to get another 5 mins.
3. If you want to stop the alarm, press any button TWICE to stop it.
3.8 Reset Setting:

Use a needle or little stick to push the “RESET” hole to reset all the settings.

4. Trouble Shooting:

1) Missing power cord, or instructions, please contact us on Amazon or by email for a new replacement.

2) If you found the clock time only appears when you touch it. Don’t worry. It’s just because you’ve set it to sound control mode by mistake. Just follow section 3.5 – Sound Control Mode to get it right.

3) To exit setting mode, stop pressing for 5 secs and it will return to time display automatically.

4) The alarm volume is fixed and **CANNOT** adjust higher or lower.

5) If some numbers are getting dimmer, you might have used batteries to power on, please know this device will run out of batteries very very quickly. We don’t recommend to use batteries to work, but power cord instead.

6) If the clock time only appears when you touch it, or it will appear and disappear from time to time. That means you may have chosen the sound control mode by mistake. Please **DOUBLE** press “DOWN” button to adjust the mode from “off:5d” to “---:5d”, which means to turn off the Sound Control mode.

7) We don’t recommend to use batteries for working because the LED light consume power very quickly. Batteries can only last 1-2 days when working. Once batteries are running off, the digits will appear to be faded because batteries voltage is not that enough to hold its normal working.

Batteries are only used for temporary short time or for travel use.

8) If you find the clock fails to remember settings. It may be the memory battery has run out of its power. You have to take out the battery shelf on the back of the clock. Take out the AAA battery also, then you will find a small kit inside, which needs to unscrew and there’s a CR2032 memory battery inside. You can replace it to recover its memory function.
