

How to Apply Mosquito Magician Concentrates

Thank you for purchasing Mosquito Magician!

Mosquito Magician is the most effective natural product to control biting insects. The concentrate is laboratory proven to kill at least 98% of mosquitoes and many other biting pests. It also repels them for up to 2 weeks after each treatment. Please read these instructions carefully to ensure you get the best results possible.

Mosquito Magician Battery-Powered Sprayers

Fill bottle at a rate of 4 ounces per 1 gallon of clean water. **DO NOT EXCEED 6 OUNCES PER GALLON.** Stir well and continue to agitate the liquid every few minutes to prevent settling. These sprayers work very well and take the effort out of treating your yard.

Hose Sprayers

Use the Full Strength Mosquito Magician Concentrate and fill the reservoir for as much as you need to apply. Different model sprayers have various ways of selecting the ratio of concentrate and water—observe directions for each model to give 1 ounce per 1,000 square feet dilution.

Pump Up & Backpack Sprayers

Fill bottle at a rate of 4 ounces per 1 gallon of clean water. **DO NOT EXCEED 6 OUNCES PER GALLON.** Stir well and continue to agitate the liquid every few minutes to prevent settling.

Fogging Machines

Mosquito Magician works very well through fogging machines. Fill reservoir at a rate of 4 ounces per 1 gallon of clean water. **DO NOT EXCEED 6 OUNCES PER GALLON.** Stir well and continue to agitate the liquid every few minutes to prevent settling. We have Contractor Packs with a fogger, concentrate, and marketing materials. Please contact us if you would like more information.

Sprinkler Magician Automated Pest Control Systems

Refer to instructions with the machine. Fill reservoir with Full Strength Mosquito Magician Concentrate. Machine is automatic and runs through the existing sprinkler system, so no applications are required. If you are interested in having an automated pest control system, please contact us for more information and pricing.

How to Apply to Your Yard

Spray enough to lightly wet plants and lawns; you will notice the pleasant smell of the concentrate on your plants—that will last for 10 to 15 minutes—until it dries on the plants. Rain will affect the residual properties of the concentrate. With minimal rain you should get good results treating once a week. With frequent rain treat 2 to 3 times a week for best results. Also spray on standing water to eliminate mosquito larvae.

IMPORTANT: Always fully read the bottle label.
