Appendix A  Technical Specifications
Hardware and Internet Setup

The NETGEAR High Speed Cable Modem provides a connection to high-speed cable Internet with speeds up to 960 Mbps.\(^1\) The cable modem is certified by all major cable Internet providers. A Gigabit Ethernet port provides fast access and downloads. The cable modem supports the assignment of IPv4 and IPv6 addresses by cable Internet providers.

This chapter covers the following topics:

- Unpack Your Cable Modem
- Front Panel
- Product Label
- Back Panel
- Install andActivate Your Cable Modem
- Connect Your Cable Modem to a Router After Installation and Activation

Note: For more information about the topics covered in this manual, visit the support website at support.netgear.com.

1. Maximum rate is derived from DOCSIS 3.0 specifications and actual throughput varies depending on your Internet subscription with your provider.
# Unpack Your Cable Modem

Your package contains the following items.

![Package contents](image)

- Ethernet cable
- Power adapter
- Cable modem

Figure 1. Package contents

# Front Panel

The cable modem provides status LEDs on the front.

![Cable modem front view](image)

- Power LED
- Downstream LED
- Upstream LED
- Internet LED
- Ethernet LED

Figure 2. Cable modem front view
You can use the LEDs to verify status and connections. The following table lists and describes each LED on the front panel of the cable modem.

Table 1. LED descriptions

<table>
<thead>
<tr>
<th>LED</th>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power</td>
<td></td>
<td>- <strong>Green</strong>. Power is supplied to the cable modem.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <strong>Off</strong>. No power is supplied to the cable modem.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <strong>Red</strong>. The cable modem is too warm and might overheat. For more information about this condition, see Use LEDs to Troubleshoot on page 23.</td>
</tr>
<tr>
<td>Downstream</td>
<td></td>
<td>- <strong>Solid amber</strong>. One downstream channel is locked.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <strong>Solid green</strong>. Two or more downstream channels are locked.</td>

</tr>
</tbody>
</table>

Product Label

The product label on the side of the cable modem displays the serial number and MAC address of the cable modem and login information, including the default IP address, default user name, and default password.

Figure 3. Product label
Back Panel

The back panel provides the connections and buttons shown in the following figure.

![Cable Modem Back Panel Diagram]

Figure 4. Cable modem back panel

Install and Activate Your Cable Modem

The cable modem provides a connection between your cable Internet provider's network and your computer, router, or WiFi router.

Connect Your Cable Modem to a Computer

During the installation and activation, you must connect the cable modem directly to a computer. After installation and activation, you can connect the cable modem to a router (see Connect Your Cable Modem to a Router After Installation and Activation on page 11).

![Cable Modem Connection Diagram]

Figure 5. Connect the cable modem directly to a computer
High Speed Cable Modem

Note: Before you connect your cable modem and contact your cable Internet provider, collect your cable account number, account phone number, and login information (your email address or user name and password).

➢ To connect your cable modem directly to a computer:

1. Connect a coaxial cable.

Use the coaxial cable that your cable company provided to connect the cable port on the cable modem to a cable wall outlet or a line splitter. Make sure that the cable is tightly connected.

Note: If Comcast XFINITY is your cable Internet provider, Comcast XFINITY recommends connecting your cable modem directly to a cable wall outlet.

2. Turn off the computer to which you intend to connect the cable modem.

3. Use the Ethernet cable provided in the package to connect the Gigabit Ethernet port on the cable modem to an Ethernet port on the computer.

4. Turn on the computer.

5. Connect the power adapter provided in the package to the cable modem and plug the power adapter into an electrical outlet.

When the startup procedure is completed, the Power LED \( \bigcirc \) lights green.

6. Wait for the cable modem to come online.

It takes at least 10 minutes for the cable modem to come online on the network. During this time, the LED behavior is as follows:

• The Downstream LED \( \bigtriangledown \) lights amber when one downstream channel is locked.

• The Downstream LED lights green when more than one downstream channel is locked.

• The Upstream LED \( \bigtriangledown \) lights amber when one upstream channel is locked.

• The Upstream LED lights green when more than one upstream channel is locked.

• After the cable modem registers with your cable Internet provider, the Internet LED \( \bigtriangledown \) lights green.

Even though an Internet connection is established, Internet service is available only after you set it up with your cable Internet provider.

For information about how to activate your Internet service, see Activate Your Internet Service on page 9.
High Speed Cable Modem

Activate Your Internet Service

➢ To activate your Internet service:

1. Visit your cable Internet provider’s website and follow the onscreen instructions to activate your Internet service.

<table>
<thead>
<tr>

</tbody>
</table>

Note: Your cable Internet provider’s contact information might change. You can also find the contact information in your monthly Internet service billing statement.

2. If you are unable to activate your Internet service using the instructions on your cable Internet provider’s website, call your cable Internet provider and do the following:

a. When asked, provide your account information and provide the cable modem’s model number, which is CM700, serial number, and MAC address.

   The serial number and MAC address are on the label on the cable modem, which is on the side of the cable modem.

b. Wait for your cable Internet provider to confirm that your cable modem is active.
c. If you do not get an Internet connection with the cable modem, ask your cable Internet provider to look for your cable modem online, and do one of the following depending what your cable Internet provider tells you about your cable modem:

- If the cable modem is not visible, your cable Internet provider can give you instructions to verify why the cable modem does not connect with your high-speed Internet service.
- If the cable modem is visible to your cable Internet provider, reboot the cable modem. Check your online status again.

**Activate Your Internet Service With Comcast XFINITY**

If you use Comcast XFINITY, you can set up Internet service by using Comcast XFINITY’s self-activation process. If you are unable to self-activate your cable modem, call Comcast XFINITY customer service. After you complete the setup, perform a speed test.

Before you start the self-activation process, make sure that your account number, account phone number, and login information (your email address or user name and password) are nearby.

➢ **To activate your Internet connection with Comcast XFINITY’s self-activation process:**

1. Close all web browsers.
2. Launch a web browser.
   
   You are redirected to the XFINITY self-activation page. If you are not redirected to the XFINITY self-activation page, visit [comcast.com/activate](http://comcast.com/activate).
3. Provide your XFINITY credentials and complete the self-activation process.
   
   This process might take up to 15 minutes, during which the cable modem reboots twice.
4. If you are unable to activate your cable modem using the XFINITY self-activation process, call Comcast XFINITY customer service at 1-800-XFINITY (1-800-934-6489).
   
   a. When asked, provide your account information and provide the cable modem’s model number and MAC address, which are on the label on the cable modem.
      
      For more information, see *Product Label* on page 6.
   
   b. Wait for Comcast XFINITY to confirm that your cable modem is active.
   
   c. If you do not get an Internet connection with the cable modem, ask Comcast XFINITY to look for your cable modem online, and do one of the following depending on what Comcast XFINITY tells you about your cable modem:
      
      - If the cable modem is not visible, Comcast XFINITY can give you instructions to verify why the cable modem does not connect with your high-speed Internet service.
      
      - If the cable modem is visible to Comcast XFINITY, reboot the cable modem. Check your online status again.
Perform a Speed Test

To determine the accurate Internet speed, visit the speed test website of your cable Internet provider and perform a speed test.

If your actual speed is lower than your subscribed speed, contact your cable Internet provider.

Connect Your Cable Modem to a Router After Installation and Activation

During the installation and activation, you must connect the cable modem directly to a computer. After installation and activation, you can connect the cable modem to a router.

Figure 6. Connect the cable modem to a router

➢ To connect your cable modem to a router after installation and activation:

1. Reboot the cable modem by unplugging the power cable from the cable modem and plugging it back in.

   Note: Do not disconnect the cable modem from the cable outlet.

   When the startup procedure is completed, the Power LED lights green.

   Wait for the Internet LED to stop blinking and light solid green.

2. Use an Ethernet cable to connect the Ethernet port on the cable modem to the WAN or Internet port on the router.

3. Power on the router.

   Wait until the router is ready.

4. Connect a computer to the router over a WiFi connection or through an Ethernet cable to a LAN port on the router.
After you set up the cable modem, you do not need to log in to the cable modem for normal operation. However, you can log in to the cable modem to change a very limited number of settings and monitor the cable modem. In the unlikely situation that you experience problems with the cable connection and cannot get an Internet connection, technical support might ask you to log in to the router.

This chapter contains the following sections:

- Log In to the Cable Modem
- View Cable Modem Initialization
- View Cable Modem Status
- View and Clear Event Logs
- Change the admin Password
- Reboot the Cable Modem
- Reset the Cable Modem to Factory Default Settings
- Change the Cable Connection Starting Frequency
Log In to the Cable Modem

After you set up the cable modem, you do not need to log in to the cable modem for normal operation.

To log in to the cable modem, you must use a web browser such as Microsoft Internet Explorer 5.0 or later, Firefox Mozilla 2.0 or later, Safari 1.4 or later, or Google Chrome 11.0 or later.

➢ To log in to the cable modem:

1. Launch a web browser from a computer that is attached with an Ethernet cable to the cable modem or from a computer that is connected to a WiFi router that is attached with an Ethernet cable to the cable modem.
2. Type http://192.168.100.1.
   A login window opens.
3. Enter the cable modem user name and password.
   The user name is admin. The default password is password. The user name and password are case-sensitive.
   The BASIC Home page displays.

View Cable Modem Initialization

You can track the initialization procedure of the cable modem and get details about the downstream and upstream cable channels. The time is displayed after the cable modem is initialized.

The cable modem automatically goes through the following steps in the provisioning process:

1. Scans and locks the downstream frequency and then ranges the upstream channels.
2. Obtains a WAN IP address for the cable modem.
3. Connects to the Internet.

➢ To view the status of the cable modem initialization:

1. Launch a web browser from a computer that is attached over an Ethernet cable to the cable modem or from a computer that is connected to a WiFi router that is attached over an Ethernet cable to the cable modem.
2. Type http://192.168.100.1.
   A login window opens.
3. Enter the cable modem user name and password.
   The user name is admin. The default password is password. The user name and password are case-sensitive.
   The BASIC Home page displays.
4. Select **Cable Connection**.

The Startup Procedure section displays the initialization progress. The Downstream Bonded Channels section displays the status of each downstream channel.

5. To see the Upstream Bonded Channels section and system time, scroll down.
View Cable Modem Status

You can view some basic information about the cable modem.

➢ To view cable modem status:

1. Launch a web browser from a computer that is attached over an Ethernet cable to the cable modem or from a computer that is connected to a WiFi router that is attached over an Ethernet cable to the cable modem.

2. Type http://192.168.100.1.
   A login window opens.

3. Enter the cable modem user name and password.
   The user name is admin. The default password is password. The user name and password are case-sensitive.
   The BASIC Home page displays.

4. Select ADVANCED.

   ![](CableInformation.png)

   The Cable Information page displays the following:

   • **Hardware Version.** The version of the cable modem model.
   • **Firmware Version.** The version of the cable modem firmware.

   **Note:** Cable modem firmware cannot be updated by customers or by NETGEAR support agents. All cable modem firmware upgrades are pushed down by your ISP when available.

   • **Cable Modem Serial Number.** The serial number of the cable modem.
   • **CM Certificate.** The status of the cable modem certificate. If Not installed displays as the status, contact your cable Internet provider.
   • **CM MAC.** The MAC address of the cable modem.

   For information about using the Reboot button, see Reboot the Cable Modem on page 17.

   For information about using the Factory Reset button, see Reset the Cable Modem to Factory Default Settings on page 18.
View and Clear Event Logs

Event logs capture important cable modem events.

➢ To view and clear the event logs:

1. Launch a web browser from a computer that is attached over an Ethernet cable to the cable modem or from a computer that is connected to a WiFi router that is attached over an Ethernet cable to the cable modem.
2. Type http://192.168.100.1.
   A login window opens.
3. Enter the cable modem user name and password.
   The user name is admin. The default password is password. The user name and password are case-sensitive.
   The BASIC Home page displays.
4. Select ADVANCED > Administration > Event Log.

![Event Log Page]

The Event Log page shows the following information:

- **Time.** The time the event log entry was recorded.
- **Priority.** The severity of the event log entry.
- **Description.** A description of the event log entry.

5. To refresh the log page, click the Refresh button.
6. To clear the log entries, click the Clear Log button.
Change the admin Password

You can change the default password that is used to log in to the cable modem with the user name admin.

➢ To change the password for the user name admin:

1. Launch a web browser from a computer that is attached over an Ethernet cable to the cable modem or from a computer that is connected to a WiFi router that is attached over an Ethernet cable to the cable modem.
2. Type http://192.168.100.1.
   A login window opens.
3. Enter the cable modem user name and password.
   The user name is admin. The default password is password. The user name and password are case-sensitive.
   The BASIC Home page displays.
4. Select ADVANCED > Administration > Set Password.

![Set Password](image)

5. Type the old password.
6. Type the new password in the Set Password field.
7. Type the new password in the Repeat New Password field.
8. Click the Apply button.
   Your settings are saved.

Reboot the Cable Modem

Rebooting the cable modem disconnects all computers from the cable modem’s local area network (LAN). After the cable modem is finished booting and reestablishes a connection with the cable Internet provider’s network, the devices reconnect to the cable modem’s LAN.

➢ To reboot the cable modem:

1. Launch a web browser from a computer that is attached over an Ethernet cable to the cable modem or from a computer that is connected to a WiFi router that is attached over an Ethernet cable to the cable modem.
2. Type http://192.168.100.1.
A login window opens.

3. Enter the cable modem user name and password.
   The user name is admin. The default password is password. The user name and password are case-sensitive.
   The BASIC Home page displays.

4. Select ADVANCED.
   The ADVANCED Home page displays the Cable Information pane.

5. Click the Reboot button.
   A confirmation message displays.

6. Click the OK button.
   The cable modem reboots.

**Reset the Cable Modem to Factory Default Settings**

To reset the cable modem to factory default settings, you can use either the Reset button on the back panel of the cable modem or the Factory reset software button. However, if you changed the default password to access the cable modem and lost the password, you must use the Reset button on the back panel.

After you reset the cable modem to factory default settings, the user name is admin, the password is password. The LAN IP address is always 192.168.100.1. You cannot change this LAN IP address.

**Use the Reset Button on the Back Panel**

⚠️ **CAUTION:**

This process erases all changes that you made to the settings in the cable modem.

- To reset the cable modem to factory default settings:
  1. Power on the cable modem.
  2. On the back of the cable modem, locate the Reset button.
3. Using a straightened paper clip, press and hold the Reset button for about seven seconds until all LEDs blink.

4. Release the Reset button.

The configuration is reset to factory default settings. When the reset is complete, the cable modem reboots. This process takes about one minute.

**WARNING:**

To avoid the risk of corrupting the firmware, do not interrupt the reset. For example, if you are connected to the cable modem web management interface, do not click a link or load a new page. Do not turn off the cable modem.

**Use the Factory Reset Software Button**

**CAUTION:**

This process erases all changes that you made to the settings in the cable modem.

➢ **To reset the cable modem to its factory settings:**

1. Launch a web browser from a computer that is attached over an Ethernet cable to the cable modem or from a computer that is connected to a WiFi router that is attached over an Ethernet cable to the cable modem.

2. Type `http://192.168.100.1`. 

---

High Speed Cable Modem
A login window opens.

3. Enter the cable modem user name and password.
   The user name is **admin**. The default password is **password**. The user name and password are case-sensitive.
   The BASIC Home page displays.

4. Select **ADVANCED**.
   The ADVANCED Home page displays the Cable Information pane.

5. Click the **Factory Reset** button.
   A confirmation message displays.

6. Click the **OK** button.
   The configuration is reset to factory default settings. When the reset is complete, the cable modem reboots. This process takes about one minute.

**WARNING:**

To avoid the risk of corrupting the firmware, do not interrupt the reset. For example, if you are connected to the cable modem web management interface, do not click a link or load a new page. Do not turn off the cable modem.

### Change the Cable Connection Starting Frequency

The starting frequency for the cable connection is automatically generated. For most Internet connections, you do not need to change this information.

**WARNING:**

Do not change the starting frequency unless your cable Internet provider instructs you to do so. Changing the starting frequency incorrectly causes serious connection and Internet problems.

- **To change the starting frequency:**
  1. Launch a web browser from a computer that is attached over an Ethernet cable to the cable modem or from a computer that is connected to a WiFi router that is attached over an Ethernet cable to the cable modem.
  2. Type **http://192.168.100.1**.
     A login window opens.
  3. Enter the cable modem user name and password.
The user name is admin. The default password is password. The user name and password are case-sensitive.

The BASIC Home page displays.

4. Select Cable Connection.

5. In the Starting Frequency field, type a number as instructed by your cable Internet provider.

**WARNING:**

Do not change the starting frequency unless your cable Internet provider instructs you to do so. Changing the starting frequency incorrectly causes serious connection and Internet problems.

6. Click the Apply button.

Your settings are saved.
This chapter provides information about troubleshooting your cable modem.

The chapter includes the following sections:

- Use LEDs to Troubleshoot
- Cannot Log In to the Cable Modem
- Troubleshoot the Cable Internet Connection

**Note:** NETGEAR provides helpful articles and documentation at support.netgear.com.
Use LEDs to Troubleshoot

The following table provides help when you are using the LEDs for troubleshooting.

Table 2. Troubleshooting with LEDs

<table>
<thead>
<tr>
<th>LED Behavior</th>
<th>Action</th>
</tr>
</thead>
</table>
| All LEDs are off when the cable modem is plugged in.                        | • Make sure that the power cord is properly connected to your cable modem and that the power supply adapter is properly connected to a functioning power outlet.  
• Check that you are using the 12 VDC, 1A power adapter from NETGEAR for this product.  
• If the error persists, a hardware problem occurred. Contact technical support. |
| All LEDs stay on.                                                           | • Clear the configuration of the cable modem to its factory defaults.  
• If the error persists, a hardware problem occurred. Contact technical support. |
| The Ethernet LED is off and a powered-on device is connected to an Ethernet LAN port. | • Make sure that the Ethernet cable connections are secure at the cable modem and at the computer, router, or WiFi router.  
• Make sure that power is turned on to the connected hub or computer.  
• Be sure that you are using the correct cable. |
| The Internet LED is off and the cable modem is connected to the cable wall jack. | • Make sure that the coaxial cable connections are secure at the cable modem and at the wall jack.  
• Make sure that your cable Internet provider provisioned your cable Internet service. Your provider can verify that the signal quality is good enough for cable modem service.  
• Remove any excessive splitters that you installed on your cable line. Run a “home run” back to the point where the cable enters your home. |
| The Power LED lights red.                                                   | The cable modem is too warm and might overheat. Do the following:  
1. Disconnect the power adapter.  
2. Wait at least two minutes to let the cable modem cool down.  
3. Make sure that the cable modem is placed in a vertical position.  
4. Make sure that the cable modem is placed in a location with good ventilation.  
5. Reconnect the power adapter. |
Cannot Log In to the Cable Modem

If you cannot access the cable modem from computer that is connected to the cable modem or to a router that is connected the cable modem, check the following:

- If your computer is connected to the cable modem with an Ethernet cable, check the connection.
- Make sure that your computer’s IP address is on the same subnet as the cable modem. The IP address of your computer must be in the range of 192.168.100.2 to 192.168.100.254.
- Make sure that Java, JavaScript, or ActiveX is enabled in your browser. If you are using Internet Explorer, click the Refresh button to make sure that the Java applet is loaded.
- Try quitting the browser and launching it again.
- Make sure that you are using the correct login information. The cable modem user name admin is lowercase (Caps Lock is off). The default password is password.

If the cable modem does not save changes you made, do the following:

- When entering configuration settings, be sure to click the Apply button before moving to another page, or your changes are lost.
- Click the Refresh or Reload button in the web browser. The changes occurred, but the web browser might be caching the old configuration.

Troubleshoot the Cable Internet Connection

If your cable modem cannot access the Internet but the Internet LED lights green, make sure that the cable MAC address or device MAC address of your cable modem is registered with your cable Internet provider (see Install and Activate Your Cable Modem on page 7).

The acceptable signal level for the downstream range is from +15 dBmV to –15 dBmV. Anything more or less than these values results in quality issues. If you use splitters, removing the splitters can help to clean up the signal.

The acceptable signal level for the upstream range is from 42 dBmV to 49 dBmV. Anything above the value of 49dBmV results in connection drops and resyncs.

The event log displays time-out messages. For information about viewing the event log, see View and Clear Event Logs on page 16.

Here are the common time-outs that are seen in the event log:

- **T1 Timeout.** The cable modem did not receive any periodic Upstream Channel Descriptor (UCD) messages from the CMTS within the time-out period. This error message is DOCSIS event message U01.0, Upstream Channel Descriptor. If this error message is seen multiple times in the event log, contact the L3 ISP support and provide them the information about the T1 time-outs in the event log.
- **T2 Timeout.** The cable modem did not receive a broadcast maintenance opportunity in which to transmit a ranging request (RNG-REQ) within the T2 time-out period.
(approximately 10 seconds). The cable modem is resetting its cable interface and restarting the registration process. If this error message is seen multiple times in the event log, contact the L3 ISP support and provide them the information about the T2 time-outs in the event log.

- **T3 Timeout.** The cable modem sent 16 ranging request messages without receiving a ranging response message in reply from the CMTS. The cable modem is therefore resetting its cable interface and restarting the registration process. This typically is caused by noise on the upstream when the cable modem’s power level is insufficient to transmit any messages. If the cable modem cannot raise its upstream transmit power level to a level that allows successful communication within the maximum time-out period, it resets its cable interface and restarts the registration process. This is an error in the power levels and causes the connection to drop. Contact the L3 ISP support and provide them the information about the T4 time-outs in the event log.

- **T4 Timeout.** The cable modem did not receive a station maintenance opportunity in which to transmit a ranging request message within the T4 time-out period (30 to 35 seconds). The cable modem is resetting its cable interface and restarting the registration process. Typically, this indicates an occasional, temporary loss of service, but if the problem persists, check for possible service outages or maintenance activity on this particular MSO headend system. Contact the L3 ISP support and provide them the information about the T3 time-outs in the event log.

- **T6 Timeout.** The cable modem sent three registration requests to the CMTS without receiving a registration response within the T6 time-out period (3 seconds). The cable modem is therefore resetting its cable interface and restarting the registration process. This problem can also occur if the DOCSIS configuration file is corrupt, or some other issue is occurring on the MSO network. Contact the L3 ISP support and provide them the information about the T6 time-outs in the event log.
The following table lists the technical specifications for the cable modem.

**Table 3. Technical specifications**

<table>
<thead>
<tr>
<th>Feature</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power adapter</td>
<td>• Input: 110–120V, 47–60 Hz</td>
</tr>
<tr>
<td></td>
<td>• Output: 12 VDC, 1A</td>
</tr>
<tr>
<td>Physical specifications</td>
<td>• Dimensions: 5.16 x 6.56 x 2.72 in. (131 x 166.6 x 69 mm)</td>
</tr>
<tr>
<td></td>
<td>• Weight: 8.82 oz (250 g)</td>
</tr>
<tr>
<td>Environmental</td>
<td>• Operating temperature: 32° to 104°F (0° to 40°C)</td>
</tr>
<tr>
<td></td>
<td>• Operating humidity: 90% maximum relative humidity, noncondensing</td>
</tr>
<tr>
<td>Interface</td>
<td>• Local: 10/100/1000 RJ-45 Gigabit Ethernet port</td>
</tr>
<tr>
<td></td>
<td>• Internet: Coaxial cable connector</td>
</tr>
<tr>
<td></td>
<td>• DOCSIS 3.0; backward compatible with DOCSIS 2.0</td>
