

PS: If you want to have wired connection, please connect this wifi repeater via its LAN Port with your wired device through an Ethernet Cable directly.

Router Mode:

If you want to set it to a WiFi Router, after S1 & S2 and enter into main interface, please connect this wifi repeater via its WAN Port with your home router/modem via an Ethernet Cable, then please follow below steps:

S3: Select Network Connection Type: Click Button <Network> then click <WAN>. You will see 3 connection types: DHCP, PPPoE, Static IP, Choose the suitable one. (A is for PPPoE setup, B is for DHCP setup, C is for Static IP setup)

A: If you have broadband account and password, which are provided by your network provider, please select PPPoE. Then please type correct user name and password.
Username: Broadband account, provided by your ISP provider.
Password: Broadband account password, provided by your ISP provider

Then please click <SAVE&APPLY> and wait for its configuration. Once finished, the router mode has been set up successfully and then you can get access into internet.

NOTE: After here, the wifi is open and every one can connect to it, if you want to set password, please keep setting from S4.

AP Mode:

NOTE: AP Mode is same as DHCP Mode.

B: After select DHCP, please click <SAVE&APPLY> and wait for its configuration. After finished, you can connect to it and get access into internet.

C: After select Static IP, please fill in IP address and other parameters then click <SAVE&APPLY> and wait for its configuration. After finished, you can connect to it and get access into internet.

Wireless Network Setup:

S4: After login to main interface, please click Button <Wireless> to set your WiFi SSID and Password. Click <SAVE&APPLY> and wait for its configuration. After finished, please re-connect to the new WiFi and get access into internet.

NOTE: If you forget the wifi password or administrator password, please reset the device.

FQA

1. Why unable to enter into the IP address 192.168.188.1?

A: (1) Before you enter into the IP address, please make sure you have connected to the wifi "Wodgreat_xxxx" first.
(2) Please don't click "Google Search".

2. After set it to Repeater Mode, why there is no internet connection?

A: That's because in Step S3.3, you typed a wrong password. You need to type your home wifi password after you selected your home wifi signal.

3. What should I do if the wifi speed gets slow after using it for several months?

A: Please unplug the device from the socket, wait for 3 minutes then re-plug it again.

4. Where I should place it if I set it to Repeater Mode?
A: Please place it on the halfway between your home router and no-signal area. Please keep it away from the heavy or bearing walls.

5. How to reset the wifi repeater?

A: (1) While connecting to this WiFi Repeater's signal, please enter into setup page 192.168.188.1 and click < REBOOT > to reboot it.
(2) If unable to enter into IP address, please use a needle to press and hold the reset button (the tiny hole) for 10 seconds then release it. You will see the WiFi LED changing off then flashing again. If you don't see the WiFi LED, please wait for 40 seconds.

6. If you meet below issues, please reset or reboot the device:

- (1) Unable to find the default SSID of this wifi repeater
- (2) Unable to operate in setup page
- (3) Want to change the setting
- (4) WiFi LED is on steady
- (5) Other unable to solve issues.

7. Now the firmware is the newest version. If in the future you want to upgrade the firmware, please enter into our official website: aigital.cn to download the latest firmware or contact us via email: aigital@163.com

8. Any inquiries, you can search "Wodgreat WiFi Repeater" on Google or YouTube for more information. Or visit our web page: aigital.cn or contact us via mail aigital@163.com or through Amazon Message.
