Profile

Preset Audio Profiles

Select from preset profiles to enhance essential audio details in your game, movie or music.

- **Adventure and Action** enhances clarity of audio details for a cinematic experience and a gaming edge, allowing you to hear your enemies to evade capture or set-up an ambush.
- **Driving Simulation** magnifies details such as tire noises as the car races along — enabling you to hear subtle differences and cues you in on how your car is behaving on the road while racing.
- **First Person Shooter** increases spatial reality and perception with virtual surround for enhanced situational awareness — important in close-quarter firefights.
- **Movies** adds more immersion and depth to make movies come alive while boosting the clarity of voices in movies for clearer dialog over explosive sounds.
- **Music** restores the dynamic range that is lost in compressed music files and adds warmth for long hours of music listening without fatigue.
- **Real Time Strategy** boosts audio clarity of elements that are key in allowing gamers to pickup points while reducing distractions — letting you stay focused when pitched against time.

Editing Profile

1. Go to the **ACOUSTIC ENGINE**, **EQUALIZER** and/or **VOICE FX** tab to adjust the audio enhancement levels.

- **Surround** provides immersion control of sounds not just around you, but also above and below for a full 3D audio experience. Hear the natural sense of audio depth, spaciousness and stunning 3D surround effects from your audio content. Enjoy an unbelievably true-to-life audio experience, whether it's over stereo speakers or headphones.
- **Crystalizer** restores the dynamic range that is lost when iTunes and MP3 music gets compressed. This makes the music sound as good as the artist originally intended, and adds an enhanced level of realism for movies and games.
- **Bass** fills in the low frequency tones and gives the extra impact for a better entertainment experience. It dramatically improves the sound experience without a subwoofer. Set **Crossover Frequency** to the lowest frequency your front speakers can reproduce to enhance bass effect.
- **Smart Volume** addresses the problem of abrupt volume level changes during playback and between songs by automatically and continuously measuring volume, and intelligently applying gain and attenuation to compensate for those changes.
- **Dialog Plus** enhances the voices in movies for clearer dialog, allowing the listener to hear the dialog over the rest of the soundtrack and over ambient noise in the listening environment.

Troubleshooting and Support

This section provides solutions to problems you may encounter during installation or normal use. This includes:

- Problems with Sound
- Problems with Simultaneous Playback/Recording
- Tips to Improve Your Recording Quality
- Restore Default Settings

Problems with Sound

No sound from the headphones.

Check the following:

- The headphones are connected to the Headset jack.
- Ensure the Sound BlasterX G5 is turned on.
- Ensure the volume control of the Sound BlasterX G5 is not at minimum level.
- Ensure the volume on your connected device or the media player is not muted.

No audio output when playing digital files such as WAV, MIDI files or AVI clips.

Check the following:

- The volume control is set at mid-range. Adjust the volume mixer settings in BlasterX Acoustic Engine Pro, if necessary.
- The powered speakers or external amplifier are connected to the Line / Optical Out jack.

No audio can be recorded from the external microphone.

Do the following:

- i. Navigate to Windows **Control Panel** > **Sound** > **Recording** tab.
- ii. Select **Sound BlasterX G5 (External Mic)** as the default recording device.
- iii. In the **Mixer** selection of BlasterX Acoustic Engine Pro, unmute the **External Mic** in the **Recording** section.

No audio can be recorded from the source connected to Line / Optical In jack.

Do the following:

- i. Navigate to Windows **Control Panel** > **Sound** > **Recording** tab.
- ii. Select **Sound BlasterX G5 (Line In or SPDIF In)** as the default recording device.
- iii. In the **Mixer** selection of BlasterX Acoustic Engine Pro, unmute **Line In** or **SPDIF In** in the **Recording** section.

Problems with Simultaneous Playback/Recording

An error message appears when recording and playing back simultaneously.

This may occur due to data transfer limitations if your computer is using a USB 1.1 connection. It may not be possible to play back, or simultaneously record and play back, content at the highest bit rate and/or frequency supported. Select lower bit depth and sampling rates for reduced CPU consumption and lower USB bandwidth requirements. Select lower settings if you encounter performance problems or if you run out of USB bandwidth. Lower sampling and bit depth rates, however, usually result in lower audio quality.

This should not be a problem if you are using a USB 2.0 connection.

Tips to Improve Your Recording Quality

The BlasterX Acoustic Engine Pro allows you to configure various audio settings to enhance your recording experience. You may toggle between the pre-configured microphone settings or adjust the audio configurations, such as microphone input volume, microphone equalizer, microphone boost, etc.

Restore Factory Default Settings

To reset your device to the factory default settings, press the **Scout Mode button** together with the **Volume Control knob** for 5 seconds and then release. All settings and configurations made previously on your device will be erased.

Safety Information

Refer to the following information to use your product safely, and to reduce the chance of electric shock, short-circuiting, damage, fire, hearing impairment or other hazards. Improper handling may void the warranty for your product. For more information, read the warranty available with your product.

- Do not dismantle or attempt to repair your product.
Refer all servicing to authorized repair agents.
- Do not pierce, crush or set fire to your product.
- Keep your product away from strong magnetic objects.
- Do not subject your product to excessive force or impact.
- Do not expose your product to water or moisture.
If your product is moisture-resistant, take care not to immerse your product in water or expose it to rain.

Earphones

- Do not listen to audio on your earbuds or headphones at high volume for prolonged periods of time as hearing loss may result. For users in the United States, go to www.hei.org for more information.
- Do not listen to your audio device at high volume when driving, cycling or crossing the road, especially in heavy traffic or any other traffic condition where such use will hinder safe travel on the roads. We recommend that consumers be extremely cautious when using this device on the road.

Avoid Hearing Damage

Permanent hearing loss may occur if the headphone is used at high volume. Set the volume to a safe level. You can adapt over time to a higher volume of sound that may sound normal but can be damaging to your hearing. If you experience ringing in your ears or muffled speech, stop listening and have your hearing checked. The louder the volume, the less time is required before your hearing could be affected. Hearing experts suggest that to protect your hearing:

- Limit the amount of time you use the headphone at high volume.
- Avoid turning up the volume to block out noisy surroundings.
- Turn the volume down if you can't hear people speaking near you.
