**INCLUDED IN HARDWARE KIT:**
1. ET1-0002 Edge Trim Tool
2. Screwdriver
3. Black Moly Tab
4. CL-0005, Dark/Silver 5" Spring Clip
5. CL-0011, 154-4 Magix Black Clip
6. PN-0008, Door (KODES 79) Edge Trim
7. PN-0009, Black 3/4" Flat Screw
8. PN-0000, Phillips Screw
9. PN-0001, Phillip Head Screw
10. PN-0002, 6.8" x 1/4" Black Moly Tab
11. PN-0003, 8" x 3/4" Black Moly Tab
12. PN-0004, 12 x 6/4 Phillips Screw

**TOOLS FOR EASY INSTALLATION (NOT INCLUDED):**
- Utility Knife
- #2 Phillips Driver
- Socket Wrench
- 8 mm Socket
- 1/2" Wrench
- Awl or Similar Pointed Tool
- Grease Pencil

**PLEASE NOTE:**
- Dirt and debris can become lodged between the fender flares and the vehicle’s bodywork, causing scratches and paint wear from vibration. We are not responsible for this type of damage.
- Verify the fit of the flares to vehicle (dust, rust, sand, or cat litter may be necessary to ensure proper fit).
- Limited Lifetime Warranty Against Any Manufacturing Defects. To claim a warranty, you must provide Proof of Purchase.

**EDGE TRIM INSTALLATION:**
(A) Peel two to three inches of red vinyl backing away from Edge Trim (SPI-0006) tape. Applying the adhesive side of the edge trim to the inner side of the flare, install the edge trim to the top edge of the flare (the portion that comes in contact with the vehicle).
(B) Press edge trim into place along the top edge of the flare in one-foot increments, pulling red vinyl backing free as you continue to work your way around the top edge of the flare.

**STEP 1**
1. Pocket Hardware Installation:
   - Put a Washer (WA-0010) on each Bolt (SW-0007).
   - Place a Nut (NU-0019) on the end of each Bolt and tighten, using a 1/2" wrench for the Nut and the supplied Screw Wrench for the Bolt. Repeat for remaining pockets.

**STEP 2**
2. Front Flare Installation Procedures (Driver’s Side):
   - Remove three factory installed screws with 8mm socket wrench. Keep screws for installation of the front flare.
   - Hold flare to vehicle and reinstall three factory screws with 8mm socket wrench.
   - Press firmly on flare and tighten all screws.

**STEP 3**
3. Rear Flare Installation Procedures (Driver’s Side):
   - Remove two factory installed screws using an 8 mm socket wrench. Keep screws for installation of the rear flare.
   - Install Clip (CL-0011) in these locations. (As shown in the figure)
   - Hold flare in place and mark three locations with a grease pencil using the holes in the flare as a guide. (As shown in the figure)

**STEP 4**
4. Edge Trim Tool Procedures:
   - Using supplied Edge Trim Tool (ET1-0002), remove edge trim against vehicle by hooking curved end under edge trim at one end of flare. Next, slide around outer edge of flare to the other end.
   - Using flat end of supplied Edge Trim Tool (ET1-0002), slide edge trim against flare by inserting straight end between edge trim and flare at one end. Next, slide around entire edge to the other end.

**NOTE:**
To protect the fenders, it is recommended to clean them regularly. Please do not use cleaners that contain abrasives that may damage the finish of the parts.
